# THE BARBARIAN HAS ARRIVED! THE TERRORPODS ARE COMING!

TWO GREAT NEW TITLES FROM PSYGNOSIS

## BARBARIAN

Can you become Hegor the famous dragon-slaying, monster-mangling Barbarian?

Are you the warrior who can enter the fearful realms of the underground world of Durgan, a world terrorized by the evil Necron?

Can you handle the adventure, the frenzied attacks, the hidden traps, the gruesome death dealing monsters?...

Your quest; to destroy the lair of the accursed Necron. Your prize; the kingdom's crown.

Your task is awesome! You must live on your wits, conquer your innermost fears, use every skill and weapon available to you.

HIDEOUS perils await. Can you survive?...

Are you Hegor the famous dragon-slaying, monster-mangling Barbarian? 512k colour versions available for Atari ST and Commodore Amiga - colour monitors only.

## TERRORPODS

It's been a long watch...As the sun disappears over the horizon, the uninviting, grey bleakness of Colian becomes apparent. Following the intense heat of the day, the onset of night adds the bitterness of sub-zero temperatures to an already hostile environment, and the stark interior of the D.S.V. appears almost homelike.

Deep melancholy is suddenly smashed by the shrill scream of a siren. The status panel has gone crazy, an extraordinary array of lights flash uncontrollably. Good grief... what's happening?

Frantically, you turn to look at the command scanner, hunting through the mass of information before you, in a desperate attempt to decipher what has happened.

Your whole being freezes...It can't be! The Terrorpods...

512k colour versions available for Atari ST and Commodore Amiga - colour monitors only.

## ARENA

The classic sports simulation.

## BRATACCAS

Become Kyne the earth scientist accused of genetic fraud.

## DEEP SPACE

The ultimate interstellar war game.

512k colour versions available for Atari ST and Commodore Amiga - colour monitors only.

► BARBARIAN	£24.95
► TERRORPODS	£24.95
► DEEP SPACE	£34.95
► BRATACCAS	£34.95
► ARENA	£29.95
► ARENA BRATACCAS	£34.95

# CONTENTS

## VOLUME 4 NUMBER 1

### FEATURES

- **Combat Simulations** 10  
For those of you who want a game that packs more than a punch.
- **Bothersome Basic** 14  
All you need to know about Basic.
- **Computer Communications** 18  
A straightforward look at the world of communications.
- **Freeze - A Jolly Good Fellow** 23  
Back-up programmes.
- **Using an Epson type Printer** 26  
The combination of Easy Script with an Epson type printer.
- **Shadow Boxing** 30  
How to improve your Basic Storage space.
- **Code Comfort** 38  
A look at the 6502 assembler and Z80 compiler for the C64.
- **Personal Choice Collection** 47  
Handy home packages for the C64.
- **Arcade Action** 52  
Produce your scrolling messages on screen.
- **Adventure Kit** 60  
The art of adventure writing.
- **Making Music** 68  
This month we look at playing tunes on your C64.
- **Link Up** 75  
Connect a short-wave technical receiver and C64 to a Transceive interface.
- **Hook Ups** 82  
Using the BBC as a disk drive interface.
- **Tech. Troubles** 100  
Tim Arnot will guide you through the technical maze.

### REGULARS

- **Data Statements** 5
- **Contributions** 24  
How to write for *Your Commodore*
- **Games Reviews** 41

*Star Paws*

- **Pirates** 58  
Game of the Month.
- **I.Q.** 65  
Intellectual games playing.
- **Competition** 74  
Win a trip of a lifetime on Concorde.
- **Software for Sale** 98
- **Listings** 102  
How to type in your programmes.
- **Back Page** 106

### GAMES AND UTILITIES

- **Sprite Grabber** 77  
Use other programme's sprites for your games.
- **Rebound** 88  
Program in an old fashioned favourite.
- **Hide-It** 94  
Protect your Basic programmes.

# THE PARALLEL DISK TURBO SYSTEM EVERY 1541 WANTS!

**THE NEW! PHANTOM**

**NOW WITH ADDED POWER!**

- LOADS 240 BLOCKS IN 7secs
- LOADS 84 BLOCKS IN 2secs
- SAVES 84 BLOCKS IN 4secs
- FORMAT 35 TRACKS IN 20secs
- FORMAT 40 TRACKS IN 23secs

screen on, with  
**FULL ERROR CHECKING**

with **TRACK by TRACK VERIFY**

- **EXPERT COMPATIBLE** — PROGRAM THE EXPERT IN LESS THAN 2secs.
- **SPEEDS UP ALL DRIVE FUNCTIONS**

- **FULL ERROR CHECKING RETAINED** — ESSENTIAL FOR RELIABILITY  
Other systems sacrifice this **CRUCIAL FUNCTION** to achieve speed increases but are in fact, **NO FASTER** only **LESS RELIABLE**.  
Buy their systems and you'll find out the hard way!

- **8 FUNCTION KEY COMMANDS FOR MAJOR FUNCTIONS.**

- 60 ADDITIONAL COMMANDS INCLUDING:

- FILE LOCK & UNLOCK
- WRITE PROTECT IGNORE — NO NEED TO NOTCH DISKS
- SET DEVICE NUMBER ● SCREEN ON/OFF
- GO1541 — REVERTS TO STANDARD 1541
- MANY OTHER USEFUL COMMANDS AID COMPATIBILITY.  
(Disable function keys, disable extra ram etc.)

- **DRIVE MONITOR** — COMMANDS INCLUDE: DISASSEMBLE, FILL, COMPARE, HUNT, ASSEMBLE, EXECUTE ETC. ETC.

- COMPREHENSIVE 40 PAGE MANUAL & ILLUSTRATED FITTING GUIDE.
- COMPATIBLE WITH MOST COMMERCIAL SOFTWARE.
- RELIABLE — DOES NOT CORRUPT DISKS UNLIKE RIVAL PRODUCTS.
- SWITCHABLE KERNAL REPLACEMENT INCLUDED FOR 64 OR 128 (64MODE).
- BRITISH DESIGNED AND MANUFACTURED — AVAILABLE EXCLUSIVELY FROM TRILOGIC.
- UPGRADABLE — DOS, KERNAL & COPIER UPGRADES WILL BE AVAILABLE SOON TO GIVE EXTRA FEATURES FOR A NOMINAL SUM.

## OPTIONAL EXTRAS

**DRIVE COOLING KIT 1.** PRICE  
RAISES THE LID BY 1.5" TO  
ENABLE GREATER AIR CIRCULATION **£2.50**

**DRIVE COOLING KIT 2.** PRICE  
Consists of a very quiet mains operated  
80mm fan unit which rests on the drive  
lid over the ventilation slots **£17.95**

## THE EXPERT CARTRIDGE WITH BUILT IN E.S.M.!

- SAVES PROGRAMS IN ONE FILE — (xcl. multipart ones)
- COMPACTS PROGRAMS used by leading software houses.
- RELOADS, DECOMPACTS & RUNS ANY PROGRAM WITHIN 35 secs.
- THE EXPERT IS NOT NEEDED FOR RELOADING.
- COMPATIBLE WITH THE PHANTOM & ALL CBM64/128 DISK DRIVES.

**WITH THE NEW V2.10 SOFTWARE SUPPLIED,  
THE EXPERT CAN DO ALL THIS AND MORE.**

### PROGRAMME PARALYSER

Stops even the most heavily protected programs  
and defeats All "anti-freeze" techniques.

### BACK-UP GENERATOR

TAPE/DISK, ● DISK/TAPE, ● DISK/DISK,  
● TAPE/TAPE Transfers memory resident  
programs whether loaded from disk or tape.

# DATA STATEMENTS

## Electronic Arts in the UK

Electronic Arts, one of the top US entertainment software companies have announced their plans to launch a U.K. subsidiary, and are looking for new talent. 'We are looking to support U.K. software artists designing high quality software', comments Mark Lewis, Director of European publishing. 'We are in discussions with a number of software developers and are happy to talk to those who believe they can offer creativity and quality programming.'

### Touchline:

**Electronic Arts Ltd:** Langley Business Centre, 11-49 Station Road, Langley, Nr. Slough, Berkshire SL3 8YN. Tel: 0753 49442.

## Shades for 'Free'

All Micronet members are now eligible for five hours free play on *Shades* - the multi-user adventure game. Shadists (as *Shades* players like to be known!) can use their five hours anyway they want - in one block of five hours for one person or spread out in smaller blocks. The offer stands for all Micronet members regardless of whether they've played before or not.

### Touchline:

**Micronet:** Telemap Ltd, Durrant House, 8 Herbal Hill, London EC1R 5EJ. Tel: 01-278 3143.

## What Book to Buy

Following the success of the 'What' range of computer books, H & D Services have decided to go national with their second volume. A major factor in the marketing of the books is that they will be sold only through independent retailers. This provides a natural link with United Software Distribution Ltd (U.S.D.) who will be presenting the book to major independent computer retailers in the U.K.

U.S.D.'s Managing Director Andy Wood commented, 'these publications help the consumers gain more understanding of the software that they buy. The books also prolong the longevity of software and they help

solve some of the queries that haunt consumers, retailers and software houses alike.'

The 'What' range are available only from computer retailers and include 'What Now?' which is a handbook for adventurers, packed with hints, maps and solutions. Also 'What Poke' which comprises hints, maps and pokes for arcade type games.

### Touchline:

**H & D Services:** 1338 Ashton Old Road, Higher Openshaw, Manchester M11 1JG. Tel: 061-370 5666.

## Computer MIDI in Action at Show

One of the big crowd pullers at the forthcoming PCW show will probably be Electromusic Research (EMR) with their live computer-controlled music demonstration. EMR's range of computer MIDI software and hardware covers most home and business 8/16/32-bit micros and new recording, sampling and scorewriting products will be on display. The special offers will include an EMR

recording system which connects MIDI-keyboard and computer, for £69.

So follow the sound of music, and you're assured of an entertaining time, not to mention the odd bargain or two.

### Touchline:

**Electromusic Research (EMR) Ltd:** 14 Mount Close, Wickford, Sussex SS11 8HG. Tel: 0702 335747.

## New Labels

Go! is a new high profile and performance software brand from U.S. Gold which claims to release six major software products between now and December. Although Go! products will dovetail into certain sales, marketing and distribution policies of U.S. Gold, they will operate in the main as a separate company in terms of advertising activities and European distribution.

## DATA STATEMENTS

Go! hope to link up with Captain America of Marvel Comics and Lazer Tag from Worlds of Wonder, the best selling toy in the United States. Also in production is the home computer version of the blockbusting Masters of the Universe film.

U.S. Gold's Tim Chaney believes in the success of Go! and comments 'we are very confident that three years experience as brand leaders in the European software marketplace puts us in the pole position to successfully launch a new brand.'

Following the success of *Barbarian*, Palace have now launched a new software label - Outlaw Productions. Mathew Tims, previously general manager of Palace Software, will head the new operation, which will run alongside Palace. Mathew comments 'there are now a number of highly skilled and professional development teams in existence. Our aim is to help them produce their best work and to market it using the skills and knowledge we have picked up over the last three years.'

The first release on the new label will be a *Shoot 'em Up Construction Kit*

From left: Jonathon Hare, Matthew Tims and Christopher Yates.

for the C64. It has been developed by Jonathan Hare and Christopher Yates of Sensible Software, who with their understanding of the C64 have developed a system, which will enable a person with no programming knowledge to write the sort of games that would have cost £10.

#### Touchline:

**Go! Ltd:** Unit 2/3 Holford Way, Birmingham B6 7AX. Tel: 021-356 3388.

**Palace Software Ltd:** 275 Pentonville Road, London N1 9NL. Tel: 01-278 0751.

## Arcade Action

Alligata Software have released *Addictaball*, a game for the C64 priced at £6.95 on disk. An addictive game of shooting, scrolling protecting, planning and humour, which demands razor sharp reflexes.

Gremlin are in the final stages of completing *Coconut Capers*, which will feature the formidable Jack the Nipper. The game is set in the jungle where the tranquility is broken by the arrival of Jack, who jumps from a plane using his nappy as a parachute.

His father however is in hot pursuit, and Jack being Jack gets up to mischief with a tropical flavour in his

efforts to avoid being caught and given a spanking. Jack discovers the cocounts are a useful form of defence against the natives and true to form tries to be as naughty as possible. A special surprise awaits Jack as he reaches 100% on the Naughtyometer, but only playing the game will reveal it!

*Coconut Capers* will be available for £14.99 on disk for the Commodore.

*Rebel* is the latest 'Gang of Five' game from Virgin. You play worker THX 2240, forced to work in an agriculture factory of the future. However, you can take no more and steal a tank from the Crowd Control Vehicle armoury. Then you must escape by diverting the solar energy normally used to enhance crop growth. You need to collect and arrange solar reflectors to reflect the beam and blast your way through the levels and make your final escape. *Rebel* is available on cassette for C64/128 and costs £9.95.

Digital Integration will be launching three new titles this autumn. *F-16 Combat Pilot* is a game which

involves using a complex payload of avionics to search, locate and destroy targets. Control a variety of modern weaponry including AIM sidewinder and AMRAAM missiles, AGM Maverick, laser guided bombs and 30mm cannon to survive and win.

The ATF (advanced tactical fighter) portrays the low-flying and virtually undetectable Lockheed YF-22A. Pick up intelligence information, chose a variety of targets and test your mind and dexterity in a hostile world.

With *Bobsleigh*, choose your equipment and back-up support

## Hardware Update

Now is the time for registered Commodore users to buy a colour monitor for their Amiga. Commodore Business Machines (UK) Ltd are offering £100 off either the Amiga 500 or A1081 colour monitor and £200 off the pair, through vouchers which have been mailed to all registered Commodore users. Commodore dealers have also been notified and a window sticker will signify their participation. There's no time to waste – the offer closes on September 12th.

An upgraded version of the Excellerator disk drive is now available for the C64 from Evesham Micros, who believe it is now the most compatible disk drive on the market. It is selling for £159 and following early production difficulties, it is now fully available from the foreign manufacturers.

The effects of exposure to noise in a computerised environment are often underestimated, and printers in particular should be acoustically shielded to minimise sound levels. Kareware have recently produced a Soundshield, which is aimed at the dot matrix or compact display wheel printer, which can reduce noise levels by 15 decibels. The unit is lined with fire resistant foam and features a tinted reinforced glass lid. The price ranges from £89.50 to £109.50, with additional options available such as a sheet-feeder attachment and stand and a plug-in fan.

In addition to the Amiga 500, C128 and C64, Commodore's distributors

The upgraded Excellerator disk drive.

have now been given control over the PC10, PC20 and PC40/20. The distributors are Tomorrow's World in Belfast and Dublin, Lightning Distribution in London, Hugh Symmons in Bournemouth and ZCL (Zappo) Holdings in Staffordshire. The new prices for complete systems with a mono monitor are £699 for the PC10, £999 for the PC20 and £1599 for the PC 40/20. Tom Hart, Commodore's (UK) national sales manager believes that 'the move into the consumer marketplace with those quality engineered products dramatically strengthens the range of Commodore products available to the consumer.'

Following successful sales, Star

within constraints of sponsorship funds, and get the true feeling of speed as you compete on World Cup and Olympic tracks. All games are available for the C64.

### Touchline:

**Alligata Software Ltd:** 1 Orange Street, Sheffield S1 4DW. Tel: 0742 755796.

Micronics U.K. Ltd have cut prices of their two most popular dot-matrix printers. The price of the NL-10 which is a nine-pin printer, offering 12 characters per second (cps) in draft mode and 30 cps in near letter quality, has dropped by over ten per cent and is now available for £248 (which includes parallel interface). At the other end of the scale, the NB-15 which provides an incredible 300 cps in draft output and laser-like letter printing at 100 cps, has dropped in price to £849.

In a bid to provide a compact and effective solution to desk-top printing requirements, Viglen have produced a range of printer stands, at prices ranging from £9.95 to £29.95. The stands are ideal for use with most 80 or 136 column PC printers and allow for up to 1,000 sheets of continuous stationery to be stored underneath.

## DATA

## Fight to Win

Gremlin have released a war game which puts the responsibility of the future of the country in your hands. What a position to be in! In *Convoy Raider*, war has been declared and the enemy is closing in and your mission is to patrol and defend the inner sea using all modern weapon systems which includes the Seawolf - a deadly accurate missile, the Exocet, a video-linked rocket and an anti-submarine helicopter. *Convoy Raider* will be available for the C64/128 on disk at £14.99.

## Touchline:

**Gremlin:** Alpha House, 10 Carver Street, Sheffield S1 4FS. Tel: 0742 753423.

## Adventure Time

The MicroProse/Origin partnership have come up with a new concept in fantasy role-playing in *Moebius*. Available on the C64 disk and priced at £19.95, it comes complete with manual and oriental headband.

The aim of the game is to retrieve the Celestial Orb or Harmony which has been stolen from Moebius. The game play is set in four different planes - each having different variables and ever-changing obstacles to overcome. At each level challenges increase, demanding greater courage and cunning, use of martial arts, swordsmanship and the wise use of

sophisticated magic systems is essential to overcome an array of opponents ranging from tigers to assassins.

Gremlin have snapped up the computer software rights to the Charles Bronson film, *Death Wish* and have been busy adapting the film to the small screen to create *Death Wish III*. Available on the Commodore 64/128, the adventure follows the fortunes of Paul Kersey (Charles Bronson) as the justice-fighter who's out to rid New York of the punks and creeps who infect the streets. Kersey's weapons include a 475 Wildey Magnum, a pump action shotgun, a machine gun and a rocket launcher. His greatest ally is his belief that the face of decent New York citizens is in his hands alone; the driving force behind all the violence and bloodshed is Kersey's *Death Wish*.

Meet *Captain Courageous* - the latest recruit from English Software. Follow his adventures through hair-raising jungle combat, journeys up treacherous rivers, dangerous descents and lethal rockfalls, quick-fire sniper attacks, dramatic gun-fights across high level bridges and the final rescue bid and helicopter snatch. *Captain Courageous* is available on the Commodore 64/128 at £8.95 for cassette and £12.95 on disk.

## The PCW Show is in Town

The Personal Computer World Show is with us once more, and after ten years is still the industry's most comprehensive exhibition for business. This year's show which is being held at Olympia is being run from Wednesday 23rd to Sunday 27th September, and as in previous years the first two days will be reserved for trade and business visitors. The show will open from 10am until 7pm, except on Sunday when it will close at 5pm.

Greater emphasis will be focused on the business visitor this year and the business hall in Olympia Two will boast industry experts in addition to some major product and company launches.

Other attractions will include a desktop publishing stand (DTP) which will give visitors the chance to see how

copies of the Daily Show News are produced. The editorial staff will also be at hand to offer advice and opinions of the fast growing DTP industry.

The Open University will be returning with regular video presentations on expert systems in British industry and image processing, and one to one consultations will be possible between viewings.

One of the more exotic attractions at the show will be a chance to win a holiday for two in Thailand. The 14-day holiday which is worth £2,500 can be won by simply entering a draw - so make level two one of your first stops.

Tickets are available at £3 each from the Keith Prowse ticket agency (01-741 9999) or at the door.

# Combat Simulations

*The following games are a selection from the growing band of simulations that pack a punch, and aren't just therapy for retired pilots suffering withdrawal symptoms.*

*By Tony Hetherington*

If your idea of simulation is pressing 43 keys to lift a plane off the ground, only to circle around for half an hour before crashing, while attempting to land, then take a back seat as Combat Simulations puts you firmly in the thick of the action. You take command (and often the controls) of a war machine with a mission and a not just a sight seeing tour and you must strike first before the enemy turns you into scrap metal.

Inflight entertainment is for those who like their excitement without their feet on the ground and includes bombing raids in World War II, 100 missions for an Apache helicopter Gunship and futuristic fights for the SkyFox. Surface tension takes to the high seas and on patrol in a Destroyer unit finally we plunge into deep trouble and dive! dive! dive! into submarine action.

## Inflight Entertainment

Flight simulators were slow to take off with programmes that were difficult to use and were little more than sight-seeing tours leaving the player to devise more and more spectacular ways of crashing. Flight simulators needed more action. These high flyers have plenty of action packed into dogfights and bombing raids and are as different as the aircraft they simulate.

## B24

In this latest combat flyer you take control of not only one plane but a full squadron of 40 B24's in bombing raids on the oil refineries of Ploesti, Rumania. Your mission is to knock out the oil supply for Hitler's war machines. The real B24 squadron that was given this task started with 60 aircraft and were left with only four after flying 50 missions. You have only 40 bombers and 19 missions to knock out 12 targets.

With a mission that's tough you're going to need some practice and so two other targets are included and so you train-as-you-bomb Mostar in Yugoslavia (just over the

Adriatic Sea from your base in Spinazzola, Italy) and the heavily guarded Rumanian city of Bucharest. Survive these training missions with your squadron in tact and you're ready for the main event.

To help you plan your assaults the game disk or tape is accompanied by a map of your targets and possible routes, an intelligence report on Ploesti and an instruction booklet that includes a step by step guide through the Mostar mission.

The first step of a mission is to take off and circle at about 2000ft as the other planes slot into formation. Then you must rendezvous with your fighter escort, precede to the target and start your bombing run. The effectiveness of your run is increased if you're flying at the correct height and speed for your bomb load and deliver it on the target. Once you've done this you should get out of the area as quickly as possible and get your squadron back to base with as many planes as possible fit and fueled for the next mission.

B24 is one of SSI's superb strategy games and despite its crude graphics, it's a frantic game to play. It was designed by two bomber pilots, so you can be sure it's accurate, and you can speed up real time to fly past the long flights to and from

the target. The game assumes that Squadron Leaders know how to fly a plane and leave you with minimal controls but plenty to do as you plan rendezvous routes with fighter escorts, bomb targets and return to base while coping with damage to your own aircraft. One mission down, 18 to go and you've already lost four aircraft and another six need repairs!

**Touchline:**

**Title:** B24. **Supplier:** US Gold/SSI, Unit 2/3 Holford Way, Holford, Birmingham B6 7AX. **Tel:** 021-356 3388. **Machine:** C64. **Price:** £19.95 (d), £14.95 (c). **Originality:** 7/10. **Graphics:** 4/10. **Playability:** 7/10. **Value:** 7/10.

## Gunship

A former Game of the Month (May '87) Gunship took flight simulators to new heights and its players on 100 missions that range from the training field of the USA to the battlefields of the world.

The Apache helicopter gunship is remarkably easy to fly considering there are 31 keyboard and joystick controls thanks to a keyboard overlay and two 'fly and fight them' tutorials.

When you've graduated from the training fields you're ready for your first sortie in South East Asia. After an intelligence report and mission details of your primary and secondary targets you must arm your Apache with a balance of 30mm cannon ammo, Hellfire missiles, Ffar rockets and Sidewinder air to air missiles. The exact nature of your weapons is decided by the mission you're on and the enemy forces that you're expecting. Cannon fire is good at close range but you'll also need some Ffar rockets to take out infantry and gun emplacements where as Hellfire missiles are needed for armoured targets such as tanks and bunkers leaving the Sidewinder to greet enemy Hind helicopters.

As you travel the globe from Asia to the Middle East, Central America and Europe you'll be challenged by more powerful and better equipped enemies and will need all your electronic counter measures, flares and chaffs to stay in the air long enough to complete your mission.

Successful missions will earn you points, medals and even promotions until eventually you'll retire as a heavily decorated Colonel.

Gunship is a massive 100 mission, 3D flight simulation

where the sky is the limit for the pilot skilled in combat flying.

**Touchline:**

**Title:** Gunship. **Supplier:** Microprose, 2 Market Place, Tetbury, Gloucestershire GL8 8DA. **Tel:** 0666 54326. **Machine:** C64. **Price:** £19.95 (d), £14.95 (c). **Originality:** 8/10. **Graphics:** 8/10. **Playability:** 10/10. **Value:** 10/10.

## Aces of Aces

The Moquito fighter bomber flew a variety of missions during World War II and now it's your turn to take the controls as you try to become the Ace of Aces.

The game begins in the briefing room as the C.O. outlines the tasks ahead to destroy the U-boats as they leave their base, shoot down incoming bombers, deflect V-1 rockets and destroy a POW train but not the cars containing the prisoners. These missions can be tackled individually but to become the Ace of Aces you will have to tackle them all in a single sortie.

To fly the mission, you will have to master the controls on five screens that show your left and right wings and engines, bomb bay and weapon selector, operations map and forward view from which you must fly the plane and shoot down enemy aircraft.

Ace of Aces owes a lot to an earlier Artech game based on the Dambusters but features more options, missions and a lot more action.

**Touchline:**

**Title:** Ace of Aces. **Supplier:** US Gold (Artech), Unit 2/3 Holford Way, Holford Birmingham B6 7AX. **Tel:** 021-356 3388. **Machine:** C64. **Price:** £9.95. **Originality:** 7/10. **Graphics:** 7/10. **Playability:** 9/10. **Value:** 8/10.

## Skyfox

Skyfox is an all action 3D combat flight simulator set in the near future where you must battle an alien invasion force of tanks, planes and motherships. The scenarios range from training missions to all out invasions that have descriptive names such as the Alamo, Massive Onslaught and Cornered.

The screen display shows the cockpit of your Skyfox Phantom showing the radar scanner to plot the position of

the enemy, shield, fuel and speed indicators as well as your view of the battlefield. You can punch up a computer screen which will plot your position as well as those of the enemy tanks, planes and motherships. Your first target must be the motherships as these can launch squadrons of tanks to destroy your installations. Lose these and you lose your chance to refuel and rearm. You can then choose whether to take on the tanks at ground level or zoom up above the cloud cover to dogfight with the enemy aircraft.

A great game which was one of Ariolasoft's greatest hits and could get a new lease of life as Electronic Arts set up a UK base.

## Touchline

**Title:** Skyfox. **Supplier:** Electronic Arts, Angley Business Centre, 11-49 Station Road, Langley, Nr. Slough, Berks SL3 8YN. **Tel:** (0753) 49442. **Machine:** C64. **Originality:** 7/10. **Graphics:** 9/10. **Playability:** 9/10. **Value:** 8/10.

Here's a duo of destroyer action in which you must protect the free world from air, sea and underwater attack in Convoy Raider and Captain your ship in seven different Destroyer missions ranging from a Subhunt to Convoy Escort.

## Convoy Raider

In Gremlin's Convoy Raider your mission is to patrol the Inland Sea and attack and destroy any enemy planes, ships or aircraft that you find. Finding them isn't a problem as they'll find you even if you don't leave your port. Surviving is the skill.

The action is controlled from five screens that are accessed from a radar screen with three sweeping radar displays showing the presence of any enemy in the sky, on the surface or underwater. If a blip shows up on any of these you must go the appropriate battleships. You must man the anti-aircraft sea wolf missiles to shoot down enemy planes or incoming Exocet missiles, the depth charge helicopters to destroy submarines and guide your own Exocets to knock out enemy shipping. You must pilot your movements around the Inland Sea using the map screen and assess the state of your ship from the damage screen.

The action is fast and furious but isn't quite up to the standards of the other simulations.

## Touchline:

**Title:** Convoy Raider. **Supplier:** Gremlin Graphics, Alpha House, 10 Carver Street, Sheffield S1 4FS. **Tel:** 0742 753423. **Machine:** C64. **Price:** £9.99 (c), £14.99 (d). **Originality:** 5/10. **Graphics:** 5/10. **Playability:** 7/10. **Value:** 5/10.

## Destroyer

Can you man 13 stations on a Fletcher class Destroyer, all at the same time? Can you also use these stations to complete one of seven missions on the high sea? You will need to do all this and more as you take the helm in Epyx's Destroyer as well as the radar, sonar, navigation, bridge, observation deck, forward and aft guns, port and starboard anti-aircraft guns, port and starboard torpedo tubes, depth charge and damage control stations! You move between the stations by typing in two letter codes such as BR for bridge and after a few seconds you're faced with a new set of controls. Most controls are self-explanatory such as aiming guns or torpedoes before firing or setting the depth charges to a bracket of depths for a better chance of taking out a submarine.

In the controlled panic of a full mission you will need all your skill and strategy to ensure that you get your shot in first, and that it counts as you can't afford long battles with a single enemy ship when you've got a convoy to protect and damage control crews to assign, a course to plot and so on. An excellent multi-screen simulation.

## Touchline:

**Title:** Destroyer. **Supplier:** US Gold/Epyx, Unit 2/3 Holford Way, Holford, Birmingham B6 7AX. **Tel:** 021-356 3388. **Machine:** C64. **Price:** £9.95. **Originality:** 7/10. **Graphics:** 9/10. **Playability:** 9/10. **Value:** 9/10.

The stealth of a submarine as it lurks unseen underwater only to surface and strike at the heart of a convoy has always been great material for a game. Until now, C64 submariners could only sign up for the Silent Service. Now they can also go on patrol in Up Periscope and will soon be able to dive! dive! dive! with the submarine version of Epyx's Destroyer.

## Up Periscope

Illionis based ActionSoft have produced one of the best

simulations you're ever likely to play as you take to the depths in a World War II fleet class submarine.

The screen display is split into three sections. A strip across the top of the screen shows the command options available and highlights those selected. Below that a 3D view displays what you can see from either the conning tower or the periscope and below that is an instrument panel showing your bearing, depth, speed, power, torpedos left and every other dial or reading you'll need to find your targets and sink them.

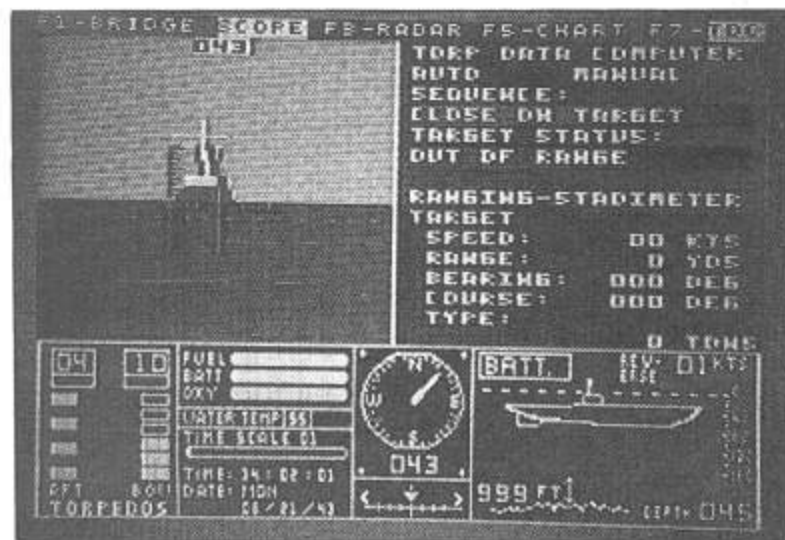

If you select the charts to plot your position or the radar to search for enemy destroyers or perhaps the torpedo data computer to lock on target then the 3D view will swap to a split-screen display with the instrument occupying the right hand side and the important part of the 3D view on the left. The result works extremely well either in a practice mode or on patrol in the Pacific.

The graphics are quite exceptional and are the result of ActionSoft using Sublogics 3D routines pioneered in its flight simulator.

A copy of this game arrived in the *Your Commodore* office in an unmarked pack and it took some time to track down where you could get it. There isn't a UK version of it yet so if you want a copy of the game disk, instruction book and tactics manual you'll have to get an imported copy from Strategic Plus Software.

**Touchline:**

**Title:** *Up Periscope*. **Supplier:** Action Soft/Strategic Plus Software, P.O. Box 8, Hampton, Middx. TW12 3XA. **Tel:** 01-979 2987. **Machine:** C64. **Price:** £30.

**Silent Service**

*Silent Service* was the first submarine simulation to reach these shores courtesy of US Gold.

Once the game has loaded and the scenario selected, the program displays the bridge with you standing by the periscope. If you press the button you can see through the scope (if you're not below periscope depth) but you can also move the joystick to go up to the conning tower to fire the deck gun, to the map table to plot a route and to the instruments to change course. Once selected the screen changes to show the relevant display.

As in *Up Periscope* you can put your submariner skills to the test in a series of scenarios and war patrols in which your targets will be tankers and troop ships and your enemy the

destroyers. To add to your problems you can include a selection of reality factors such as poor visibility, zigzagging convoys, dud torpedos and the worrying expert destroyers.

*Silent Service* is the easier submarine game to play but *Up Periscope* will provide a better campaign game. You may even get promoted.

**Touchline:**

**Title:** *Silent Service*. **Supplier:** Microprose, 2 Market Place, Tetbury, Gloucestershire, GL8 8DA. **Tel:** 0666 54326. **Machine:** C64. **Price:** £9.95.

**Originality:** 7/10. **Graphics:** 8/10. **Playability:** 8/10. **Value:** 9/10.

# Bothersome Basic

*Given up on Basic or never got started? It does have its uses – and it is worth having a second go, so follow this series. . .*

*By Eric Doyle*

**F**or several years now, Basic has been courted, struggled with and ultimately ignored by countless thousands of would-be programmers. The main problem is that there are very few training courses specifically aimed at the Commodore 64 home user. I was myself involved with an enterprise aimed at bringing Basic to the masses through intensive weekend courses. One message was clear, it is not easy to learn from manuals alone and most people require clear concise instruction to help them understand the whys and wherefores of specific programming problems.

Having just alerted the Editor to the apparent futility of this series I'd better quickly explain my Basic philosophy!

This series will deal with all aspects of Basic for the beginner, the crest-fallen and the persistent keyboard basher. If you find you don't understand any area that we cover during future months, pick up your pen and write to me. If a routine in one of your programs refuses to respond to gentle persuasion, let me know. Before I disappear under a flood of white envelopes I will say now that I can't promise to have enough hours in a week to answer all of your individual problems but I do promise to give all the help I can but only if you follow the instructions at the end of this article.

Each month the article will deal with a simple programming technique followed by a deeper dive into the workings of the computer which may be too advanced for those just wishing to write some useful routines, but which will provide the key to a fuller understanding of computers for those who wish to progress to machine code routines later on.

## Essential Attitude

A good attitude to take towards your computer is to think of it as a foreigner with a limited command of English. The first reaction a confused tourist will experience is the natural assumption that they're as thick as two short planks and as deaf as a post. In most cases this is not really a fair attitude but with a computer nothing could be nearer the truth. If you don't believe me think of all the times the machine has refused to perform the simplest of tasks without fault and consider why we have to use CAPITAL LETTERS!

Presumably you will all have read the erudite and definitive training given in the Commodore manual and, despite this handicap, have nevertheless gleaned a few of the very basic commands available to you. I will assume that you can now successfully PRINT messages on the screen and that you will also have sussed the fact that programs consist of numbered lines of instructions which the computer slavishly reads and obeys unquestioningly. A simple program would look like this:

```
10 PRINT "DON'T PANIC"
```

Type RUN and the words DON'T PANIC appear on the screen. All very comforting but not exactly useful.

We can get the computer to do something fractionally more thrilling by using a device known as a loop. This causes the program to madly repeat the program over and over again. The simplest way to do this is to add the line:

```
20 RUN
```

All this does is to get the program to re-run time and again and, despite the comforting message, it will induce extreme panic in the beginner when the wretched machine refuses to stop. Don't reach for the power switch, simply press the key marked RUN/STOP on the extreme left of the keyboard and the computer will take a break until you type in RUN again.

Believe it or not, one of the most common faults at this level of programming is to forget to press the RETURN key when typing in the program. If your computer isn't behaving properly type LIST (remember to press RETURN) and the contents of the program memory will be revealed.

Now that you're fully equipped with a way to drive computer salesmen up the wall with eternally repeating rude messages at your local computer store let me say that he will not be impressed with your programming style! Far better to substitute line 20 with:

```
20 GOTO 10
```

This simply tells the computer to loop back and repeat line 10 ad nauseam or until the RUN/STOP key is pressed.

Once again we have produced a program with very little practical application except for hi-tech vandals who make the salesman's life a misery of continual vigilance.

## To Usefully Go (To)

Before we see how the GOTO command can be used in a sensible way, we have one more kind of loop to consider which introduces a basic concept used by all programs: the variable.

Type NEW, press RETURN and you will clear the computer's memory ready for a new program. If you try LIST at this point the computer will simply respond with the word READY so type the following program in:

```
10 FOR A=1 TO 10
20 PRINT "DON'T PANIC"
30 NEXT A
40 PRINT "FINISHED"
```

Run the program and you will find the phrase printed just ten times on the screen. To explain this miraculous phenomenon concentrate on line 10.

The letter A is known as a variable. The best way to imagine this is to think of the computer as a stack of boxes. We have asked the computer to mark one of these boxes with a big letter A in which it will store anything we say that A is equal to. You may now think that we've told the computer that A=1 but what about the TO 10 bit? The main thing about a variable is that it can be varied! We've told the computer that A will vary between 1 and 10. The computer translates this as meaning that A will have a value of one at the beginning of the program so it stores that value in the box labelled A.

The program then runs to line 20 and prints the message. Then when line 30 is translated the computer checks back to where A=1 TO 10 was encountered and loops back to that line. Now the clever part occurs. Checking the contents of box A the computer finds that it still contains a one. Having been told that A will vary between 1 and 10 it increases the content of the box by one so that A now contains the value two. Line 20 is obeyed and NEXT A is encountered again so it loops back to line 10. Once more the content of box A is increased by one to three and the whole process is repeated until A has a value of ten.

When A is increased the computer checks to see if that number is greater than ten. We have now reached the point where A=10 and is incremented to eleven this is bigger than ten and so the program jumps to the line after the NEXT A command and FINISHED is printed on the screen.

How can we prove that this happens? First of all type PRINT A and press RETURN. The value eleven is printed on the screen. Hmm, it seems plausible but we need proof.

## Semi Differences

Let's try something different. LIST 20, move the cursor to the end of line 20 and type in a semi-colon. Press return and LIST the program. Masterfully, the computer should have inserted the altered line in its correct place in the program:

```
10 FOR A=1 TO 10
20 PRINT "DON'T PANIC";
30 NEXT A
40PRINT "FINISHED"
```

Change line 40 to read PRINT A and run the program. This time the message is printed ten times across the screen with 11 printed at the end. The semi-colon tells the computer that the next PRINT statement will continue from where the last print statement leaves off. Alter line 40 to:

```
40 PRINTA:PRINT"FINISHED"
```

Re-run and you'll see that the number 11 is now printed on a separate line. We have ended the semi-colons dictatorial reign. As you can see more than one command can be written on a program line as long as you separate the commands by a colon. NEW the program and type this in:

```
10 FOR A=1 TO 10:PRINT A:
"DON'T PANIC":NEXT A:? A
```

Don't worry about the question mark in line 10, just type in the line as printed here and run the new program.

This time the messages are preceded by a number which is the current value of A. List the program and you'll find that the question mark has changed to the word PRINT. The computer has a built-in shorthand

Command	Abbreviation

which can save space and time. You may have encountered listings which have lines that the computer refuses to accept because they stretch beyond two lines of text on the screen. This is known as the logical line length which, logically, is the maximum length of a line and equals 80 characters or in other words two screen lines.

We'll come back to this later so store it as the back of your mind in a box marked 'Don't Forget'.

## Nine Times?

Let's put our loop to some serious work. A computer is more than a sophisticated adding machine but it can be used to best effect for calculations. Let's construct a program which produces the nine times table. We could do this in the long winded way which would repeat lines such as:

```
10PRINT"2 x 9 = ",2*9
20?"3 x 9 = ",3*9
and so on, but using a loop simplifies
all this typing:
10 FOR A=2 TO 12
20 ?A;" x 9 = ";A*9
30 NEXT
```

You'll notice that I've failed to type A after NEXT in line 30, preferring to let the computer decide which variable we're currently using. This variable's name is not particularly helpful when you come back to look at the listing in ten years time so why not use the computer's ability to understand longer variable names. It could easily be called NUMBER instead of A, but you must change the name in each line where it appears.

We can run two loops at the same time by placing one inside the other:

```
10 FOR MULTIPLIER=2 TO 12
20 FOR NUMBER=2 TO 12
30 ?NUMBER;" x ";MULTIPLIER;"
   =" ;NUMBER * MULTIPLIER
40 NEXT NU,MU
```

Running this program causes the computer to put up the full set of tables from two to 12 but it all goes too quickly for any practical purpose.

You'll also notice that I've only used the first two letters of each variable's name in the NEXT statement. The name of a variable is a bit of a con because the computer only

labels the relevant boxes with the first two letters of the variable's name. When naming variables you must always remember this because the computer would treat variables called MULTIPLIER and MULTIPLICAND as the single variable MU and chaos would result.

## Loops Within Loops

You'll also have seen that I've gone back to naming the variables after the NEXT statement. When more than one variable is used it's safer to do things this way but make sure that the variables are named in the correct order. The computer will not accept loops which are not properly 'nested' inside one another. In other words the following is acceptable:

```
10 FOR A=1 TO 10
20 FOR B=1 TO 5
```

```
120 NEXT B,A
```

But in the following, the loops are not nested loops and would cause problems:

```
10 FOR A=1 TO 10
20 FOR B=1 TO 5
```

```
120 NEXT A,B
```

Meanwhile, back in our program there is one way to make it easier to see the times tables by adding the following line:

```
40 NEXT NU
50 FOR DELAY=1 TO 250:NEXT
60 NEXT MU
```

Now the program pauses between each table printout. Line 50 simply makes the computer count to 250 before continuing. Try varying the value and see what happens.

## Know Your Shorthand

Before I pull the plug on this week's beginner's course let's go back to the computer shorthand.

Apart from the question mark for PRINT, most of the other keywords can be shortened by using the first one or two letters of the keyword followed by the next letter Shifted. The best way to see this is to switch the computer into lower case mode by holding down

the Shift key and pressing the Commodore key once.

Type in the following:

```
10 ?:pO:nE:rU:reT
```

List the program and you'll find the keywords revealed in full. A full list of abbreviations can be found near the back of your Commodore manual but I included it here to show the number of command keywords at your service.

## The Deep End

The following line extends beyond the logical line on the screen. Try entering it as printed here and see what happens when you press RETURN:

```
10PRINT "THIS WOULD NOT
FIT INTO ONE PROGRAM LINE";
FOR A=1TO 10:POKE1024+A,0:
NEXT:"BYE"
```

Next switch to lower case and enter the line as follows:

```
10 ?"this would not fit into one
program line",fo a=1to19:pO102+a,
0:nE:"bye"
```

This time the line goes into memory. List it and it does the impossible by stretching over three screen lines. Why?

To understand this phenomenon you have to realise that every character in a program line is stored as a separate number in consecutive memory locations. Keywords are stored as a single number no matter how long their real name is. PRINT is stored in memory as the value 153 but in a statement such as:

```
PRINT "PRINT YOUR NAME"
```

the first PRINT would be stored as a single byte of value 153 but the second PRINT in the quotation marks would be stored as a string of ASCII codes for the relevant letters: 80,82,73,78 and 84. If it were possible to poke a line directly into memory you could feasibly enter almost 40 keywords on one line!

*Send your problems to Eric Doyle, Bothersome Basic, Your Commodore, ASP Ltd, 1 Golden Square, London W1R 3AB enclosing any relevant printouts or listing recordings relating to your query. I'm afraid that I cannot answer queries by phone under any circumstances.*

YG

# Mini Office II

**6** powerful home and business programs in just **ONE** package – at a price that simply can't be matched!

Outstanding value for money . . . If you want to use your 64 as a highly efficient office machine, Mini Office certainly gives you the power you need.

– CCI

It's a brilliant introduction to business computing. The only fault I can find is that it's just too generous for the price – Database could have sold it for a lot more. It makes some of its overpriced competitors hang their heads in shame.  
– Commodore User

'This package is incredible value'  
– Daily Mail Home Computing Guide

Voted Business Program of the Year – 1985 AND 1986  
Pop. Computing Weekly

## WORD PROCESSOR

Compose a letter, set the print-out options using embedded commands or menus, use the mail merge facility to produce personalised circulars – and more!

## SPREADSHEET

Prepare budgets or tables, total columns or rows with ease, copy formulae absolutely or relatively, move directly to a specific location, recalculate automatically – and more!

## GRAPHICS

Enter data directly or load data from the spreadsheet, produce pie charts, display bar charts side by side or stacked, overlay line graphs – and more!

## DATABASE

Build up a versatile card index, use the flexible print-out routine, do powerful multi-field sorting, perform all arithmetic functions, link with the word processor – and more!

## COMMS MODULE

Using a modem you can access services such as MicroLink and book rail or theatre tickets, send electronic mail, telex and telemessages in a flash – and more!

## LABEL PRINTER

Design the layout of a label with the easy-to-use editor, select label size and sheet format, read in database files, print out in any quantity – and more!

# Computer Communications

*Communicating with computers is very fashionable at the moment, but can also seem very confusing to the novice. We take an in-depth look at what communications are and why they are needed.*

*By Jennifer Goldsmith*

We all know and understand what is meant by human communications but computer communications are different, or are they? They are different because a computer is a machine which cannot think, but which is programmable and more importantly we can get to the inside of a computer whereas we cannot connect a lead from one person's brain to another! A computer and a person are similar in the way that data (ideas

or words) is sent from one machine and received and interpreted by another. That's fine, you may say, but why do two computers want to communicate?

The answer is simple, we want them to. We want and need the information which is only available through them. In a large company, perhaps using different systems, information may need to be transferred from one computer to

another within the same building, so a phone line is not necessary but a fast rate of transfer (baud rate – explained later) is.

On the other hand, to transfer data between different offices or between your home and a computer miles away necessitates the use of a telephone line (except in a specialised field where data is transmitted via satellite). A telephone line limits the rate of transfer which can take place.

## Connecting Your Computer to the Phone Line

In order to connect your computer to the phone line, there are two essential items you need.

First of all, your phone line must have the 600 Jack type sockets. These sockets allow you to plug in your phone, answering machine or modem providing of course, that the peripheral, i.e. your phone or item that you wish to plug in, is fitted with a little white plug.

Secondly you need a modem. The word modem is an abbreviation of the words MODulator DEModulator. The signals a computer understands are not the same as those which go along a telephone line and therefore a translation process is necessary at both the sending and receiving ends. This translation process is carried out by the modem.

Also the software used depends on the modem you use and the purpose for which it is to be put. Some modems come with software either in them (in ROM) or on disk with them, others require you to purchase the software separately.

### Which Modem?

Before this question can be answered, you have to decide what services you want to access with your computer, in other words you have to decide what you want to do once you have it connected up. It's rather like buying any other software; you have to decide what features that software should have, which will be dependent on what you want to do.

### Which Features?

The first thing to consider when deciding on which modem to use, is baud rate. Baud rate is the rate at which data transfer occurs and is measured in bits per second (bps). (Remember that a single character is made up of eight bits or one byte, at least as far as eight bit machines are concerned.)

However, when characters are sent from one machine to another, additional signals are needed to indicate to the receiving computer, i.e. 'end of character'.

Therefore, as a rule of thumb, when converting from baud rate to

characters a second, you should divide by ten. Thus a baud rate of 300 is equivalent to 30 characters per second. Also the maximum baud rate which most telephone lines can use in this country is 1200 bps.

The common baud rates used in Britain over the telephone line are 300/300, 1200/75 and 1200/1200.

When baud rates are written, the downloading or receiving rate is written first and the uploading or sending rate is written second. In two out of three cases the rates in both directions are the same.

The baud rate 1200/75 is very popular in Britain, (although never used in America) enables information to be received at 1200 bps, yet sends information at only 75 bps. The baud rate 300/300 is used for Telecom Gold, Packet Switch Stream (PSS) and bulletin boards both in this country and the USA.

The baud rate 1200/1200 is used mainly for user-to-user file transfers and fast upload by editors on Prestel and Compunet. This is also used in the USA. Companies such as Prestel, Compunet, Telecom Gold, PSS and bulletin boards favour 1200/75.

### Mini Update

Without going into too much detail at this stage, I'll briefly explain some words that I've used.

*Prestel* is a service run by British Telecom, yet its information comes from various firms, organisations and hobbyists.

*Compunet* is a service run by Compunet Teleservices Ltd and is specifically for 64 and 128 users at the moment.

*Packet Switch Stream* is a service run by British Telecom (in this country) which allows you to access computer systems in other countries, e.g. USA, Europe, etc, which use different communications protocols, i.e. have different parameters, to our own.

*Telecom Gold* is another service run by British Telecom.

*Bulletin Boards* are services provided by private individuals or companies for people with similar interests, e.g. a catalogue of a company's products, or a particular hobby such as amateur radio or commodore users.

### Interfacing the Modem to the Computer

When deciding which modem is needed, the next part to consider is how to interface the modem to the computer. The two main interface standards used are a) interfacing to the cartridge port and b) interfacing with the RS232 (usually via the user port). This can be an important point to consider, e.g. if you plug a modem or cartridge into the cartridge port of the 128 it will power up as a 64. Also some software will not let you print out via the user port if the modem is plugged into the cartridge port, but this is much more of a software problem.

## What Must the Software Do?

Thirdly, and perhaps the most important issue, is software. Must the software be viewdata compatible? Viewdata compatible is the term used for systems which work like Prestel where a 'page' of information comes up in colour on your TV screen using 1200/75 baud rate. It is similar to teletext, but not identical.

Compunet is another system where you receive a screenfull of information at a time but are its protocols (parameters) different to those of Prestel? Have you thought about sending and receiving files via the phone line so you can work in conjunction with your friends miles away? Do you want to be able to look at Bulletin Boards and if so at what baud rate? For the more adventurous, how about running your own bulletin board or becoming an editor on Prestel? Do you want to be able to print the information out on paper (e.g. a screen dump)? And so on.

Finally, there are the more 'advanced' features which you look for in a modem, e.g. can it autodial? That is, can you type in the number at the keyboard and let the modem dial for you? Can the modem autoanswer, e.g. if someone rings your number, will the modem answer? This feature is only really necessary if you are running a bulletin board and then it becomes essential. Has the modem error-checking? This is a very important feature if you are downloading software, i.e. receiving a file from another computer, e.g. Prestel, and storing it on disk. Another question to be asked is whether the modem is full-duplex or half-duplex? Full-duplex is a true two-way communication because your computer screen displays what you are typing, as well as what is being typed on the other computer. (Actually, whatever you type, is first sent to the other computer and then sent back to your computer and displayed on the screen. So if you are using full-duplex and your typing appears on screen, you know that the connection has been made.) Half-duplex, however, lets you see only what is typed on the other computer. Some services use full-duplex and others half-duplex, and so it is necessary to consider this feature with baud rate once you know how you will be using your modem.

## Comparing the Modems Available

Today there are many modems on the market. I will discuss some of them, along with the various software packages that either come with them or which can be bought separately. This will provide you with sufficient information to let you investigate on your own before deciding which products to buy.

### The Commodore Modem

This autodialling modem is no longer being manufactured but many do exist. It is the most versatile modem, in as much as you can access all systems with it. In fact, it is the *only* modem which can be used for accessing Compunet. The disadvantage of using the Commodore modem is that it works at 1200/75 or 1200/1200 (half-duplex) and does not work at 300/300. Compunet Teleservices do a very good, cheap deal if you purchase your modem when joining Compunet: the modem is given away free! (see later).

If you join Compunet, you can download (either for free or for a small charge) various software including software for accessing Prestel, terminal software (i.e. for accessing scrolling systems like Telecom Gold) and user-to-user software (for transferring files), from Y2. Software for prestel editing is available from Y2. This modem can be used with the 64 or

128. It is also British Telecom approved!

### 64 Multi-modem

The 64 multi-modem can be used with the 64 and 128 will let you operate at all three baud rates and has all of the software in ROM. It costs £116.15 including VAT, but has many features including autodial and autoanswer which includes facilities for logging callers and taking messages. The only additional software you need is user-to-user and to check whether the prestel editing software works with it. However as most people do not become editors on Prestel, this is not so important at this stage. Software for running a bulletin board is also available from Y2.

### Voyager 7

The Voyager 7 is no longer being manufactured yet there are still a lot around as it has the advantage of being used on other micros, with the appropriate software. It is similar in specification to the 64 Multi-modem but a cartridge is included which provides the software you need. Although the cartridge plugs into the cartridge port, (logically!), the modem is an RS232 modem which is why it can be used on other micros.

## Modems from Tandata

Tandata Marketing Ltd have produced various modems which use a serial interface from the TM110 which could be used with the VIC20, 64 and 128 at a cost of £99 compared with the TM512E which costs £339. Tandata's modems usually allow all the combinations of baud rate with both full and half duplex along with other facilities, like being able to store your phone numbers and passwords. This means that in order to log onto a system you simply press a couple of keys and the modem automatically dials the appropriate number and logs you on – very convenient, as long as the modem does not fall into the wrong hands!

## Modems from Miracle Tech.

The 64 Multi-modem is a product from Miracle Technology but it cannot be used with other micros. On the other hand the WS2000, WS3000 and WS4000 are very versatile RS232 modems. The WS4000 costs £159 and has many features – as they all do. On the other hand the WS2000 costs only £99 and is still available. The WS3000 comes in various versions costing from about £300 upwards! They all come with the necessary software to drive both Prestel and Telecom Gold (terminal/scrolling software). There are various versions of these modems including some expensive ones, which have useful features like detecting the baud rate of the host machine and setting itself accordingly.

## Connecting to a Service

Before powering up your computer, make sure that your modem is in place and correctly connected to your computer. Never connect or disconnect your modem once you have switched on the computer. Always switch off first. If you do not, you can blow some of the chips inside the computer. Once everything is physically in place, dial the computer you want to communicate with. If your modem autodial then just follow the manual's instructions and type in the appropriate phone number. If your modem does not autodial, then you have to make sure that your phone is either plugged into your modem or into the same Jack as your modem

depending on which type of modem you have. Once you have dialled the computer and it has answered, you will hear a high pitch whistle. You then connect the modem by pressing a button or a switch.

## Which Service?

So far we have said that you have to decide on what you want your software to do before obtaining your modem. To do that you have had to decide which computers you will want to access. We will now take a brief look at the main systems in Britain, namely Prestel, Compunet and Telecom Gold.

## Prestel

This is British Telecom's viewdata system. It is in colour with graphics and a screenfull of data is displayed at a time. A screen of data is 22 columns high and 40 columns wide. Although British Telecom own the computers which store the information, the information is provided by various Information Providers (IPs). The IPs are numerous and vary immensely from the AA to the Zimbabwe Tourist Board. There are over 300,000 pages of information on almost every subject including Agriculture, Education, Banking, Microcomputing, Hobbies, Travel and Teleshopping.

Some of the IPs use Prestel as a gateway to their own computers, i.e. Prestel automatically connects you via a phone link to another computer. On Prestel there is the facility to receive and send mailboxes, receive and send telexes, to download software and to purchase certain items using your credit cards. You can even now use Prestel to access Telecom Gold! Prestel is not just a factual encyclopaedia; there are also many games available (including multi-user games) quizzes and competitions.

Prestel is also cheap, 99% of all people in the UK have local call access. Even if you are abroad you can use PSS to access it. Computer connect time is only charged from 8am to 6pm Mondays to Fridays. At all other times it is free. Most pages are also provided free but some are charged for (city finance pages) but you are always notified in advance. The only other charge which you will come across, besides the Prestel subscription of £6 per quarter is the charge for various closed user groups (CUGs). Some CUGs are free, others are very expensive. The Prestel Microcomp-

uting CUG is only £10 per quarter and this gives you access to literally thousands of pages. So for £16.00 per quarter, you have access to a magazine which is updated frequently and which consists of thousands of pages. Some interesting areas are also in the Prestel Microcomputing CUG even though they are not exactly Microcomputing, such as Amateur Radio in the ClubSpot area.

## Micronet

The Prestel Microcomputing CUG is owned by a company called Micronet. Micronet is the biggest IP on Prestel which explains why they can produce so many lovely things. The advantage for newcomers who have not yet purchased a modem, is packages. These packages, usually £99 (although £129 for the Amiga) include a modem and software for accessing Prestel *plus* a year's subscription to Micronet and Prestel (which is worth £64). So for £35 you get a modem and software. These packages exist for the Commodore 64, 128, +4, Amiga and PC (as well as for other micros).

## Compunet

As I've said before, only the CBM modem can be used to access this system. A subscription to Compunet can cost anything from £9 to £15 a quarter, depending on the type of account required. There are connect time charges but some of these can be dispensed with if you have a GOLD account (£15 per quarter). If you take out a quarter's Gold subscription plus post and packing of £3.50, a modem will be provided free of charge!

There is not local call access for everyone. So why use Compunet? Compunet does provide facilities that Prestel does not, e.g. you can buy items and have them charged to your Compunet account (which is something Prestel does not do). Compunet also has various IPs but not nearly so many as Prestel, but the information on the system is all geared to 64/128 users, but is not only to do with Microcomputing – there is also a hobbies section. Unlike Prestel where viewers cannot edit or upload pages unless they have access to the editing computer, Compunet users can upload pages into an area called the Jungle and without the need to use a

separate computer.

Compunet also has a useful editor which can be used both online and offline. It has many facilities and it is the way you print pages from Compunet. Compunet also has a duckshoot menu, so when you want to go into the editor for example, you move the cursor until it gets to editor and then press return. Prestel on the other hand is mainly operated by numbers which originates from the days when most terminals were not alphanumeric. Prestel has recently begun to use words called keywords, so instead of \*8107# you can key \*RSG# or \*ICPUG#. The main disadvantage with Compunet is that it is slow, but improvements are being in the system to speed it up.

### Telecom Gold

This is a scrolling system in black and white. It is ideal for sending and receiving long documents or for searching special databases which are

expensive (£1 a minute). Telexes are fairly cheap on Telecom Gold. There are however, connect charges at all times and these are expensive when compared with Prestel or Compunet. For example after 7pm in the evening, Telecom Gold's connect charges are three pence a minute. Prestel is free and Compunet is about 60 pence an hour (a penny a minute). However, no-one remains on Telecom Gold for long, it is not meant to be a system which you browse around, although various items of useful information and facilities are provided. Like Prestel it can be accessed by PSS.

Bulletin Boards vary considerably and either use scrolling or view data compatible software. One of the well-known viewdata compatible BBs is Databox, RSG's bulletin board for Amateur Radio Hobbyists (Tel 0707 52242). Like most Bulletin Boards few phone lines are available which means that you may find it hard to get on to the system at popular times or of course the software can fall over!

### Touchlines:

## AMAZING NEW 'TOTAL BACKUP' CARTRIDGE FOR COMMODORE 64 AND 128 (IN 64 MODE)

# NEW ACTION REPLAY V.3 FROM DOSOFT UNSTOPPABLE 'TOTAL BACKUP' CARTRIDGE

OUR NEW INNOVATIVE HARDWARE AND SOFTWARE COMBINATION  
GIVES YOU MORE POWER, MORE FEATURES, MORE FUN!!

Action Replay V.3 is now more powerful, has more features and will back up more programs than any competing cartridge. It handles the latest protected games!

Just plug it into the expansion port then press the Magic Button! Our new hardware design makes this absolutely unstoppable. Now you are in complete control. Tape to tape. Tape to disk. Disk to disk. Disk to tape. No special knowledge is required. It tells you exactly what to do. It's so friendly—and it's a lot of fun too!

Become invulnerable! Action Replay V.3 now has a SPRITE KILLER. Play weird games! The unique SPRITE MONITOR lets you save sprites from one game and load them in another! The mind boggles!

Nothing else offers all these features at this price!

### ■ Mega-Freeze

Freeze and save ANY working program—the Magic Button is unstoppable—unlike other cartridges. Also it is now undetectable by software!

### ■ Independent

All programs reload without cartridge—and at turbo speed—tape or disk.

### ■ Extra Fast

Make all backups at Turbo Speed—much faster than rival cartridges. Dual speed Tape Turbo is up to 3 times faster than commercial Turbos 10 times faster than Commodore.

### ■ Super Compact

Intelligent compacting techniques minimise program size into single files. Save 3 or more per disk side.

### ■ Multistage Saves

Transfers MORE multistage loaders from tape to disk than any other. And all parts Turbo load—another feature unique to Action Replay.

### ■ So Easy to Use

Action Replay V.3 is a delight to use. All functions described on screen. No user knowledge is required.

### ■ SpriteControl

Unique Sprite Monitor lets you disable them. Save them! Change them!! Customise your games!!

### ■ Picture Save

Unique! Save ANY Multicolour Picture, including title screens. Compatible with Blazing Paddles, Koala, Graphic Slideshow etc. Built-in Slideshow for tape users.

### ■ Disk Fastloader

Superb bonus feature loads five times faster. Takes up NO memory.

### ■ Code Inspector

Look at whole memory—program, registers, etc. Everything you need.

### ■ Compatible

Fully compatible with Commodore 64, 64C, 128 and 128D in 64 mode, 1541, 1541C, 1570, 1571 and Enhancer Drives, CBM compatible tape recorders, FastDOS, and Turbo ROM—can the others say that???

**£29.99** GET MORE FOR LESS!

Buy Action Replay with DiskMate in ONE cartridge ONLY £39.99

Action Replay and DiskMate are also available from Datel Electronics

THERE'S NO STOPPING ME NOW!

### DiskMate Cartridge V.2

This is the way Commodore should have their DOS. Single keystroke commands: e.g. LOAD and RUN straight from directory, and much, much more! Works with all drives: 1541, 1570 and 1571.

- 2 minute complete Backup • Very fast disk functions • Invisible Toolkit • 10 second Format • Powerful Floating Monitor • SAVE "at" bug cured • Takes up NO memory • Unstoppable reset

**£14.99** TERRIFIC VALUE

Buy DiskMate with Action Replay in ONE cartridge ONLY £39.99

### Graphics Slideshow

View pics from games, graphic packages or loading screens singly or in sequence. 16 pictures per disk. Turbo load. Disk only.

LOOKING GOOD AT £4.95

### SPECIAL OFFER!

Enhancement and Slideshow on one disk ONLY £11.95

### 100% SUCCESS? WE ASK: WHO'S KIDDING WHO?

Action Replay V.3 will back up ANY program which ANY other cartridge can—and much more! It also has unmatched features. For instance, 'Freeze Frame' uses more disk space, saves SLOWER, has a SLOWER tape loader and has NO built-in disk fastloader, NO picture, NO Sprite, NO restart features, yet costs £10 more!!! So, come on, who's kidding who? If Action Replay V.3 doesn't live up to our claims, return it within 7 days of receipt and you can have your money back!

### Enhancement Disk

Get even more from Action Replay with this Bonus Disk to back up the new non-standard multi-stage loaders.

GREAT VALUE AT £7.95

Our cartridges carry a twelve month guarantee against mechanical failure.

### How to get your DoSoftware

Please send cash/cheque/P.O. with order for fast despatch (SAE only for full details). Send off now to: DoSoft (Dept YC), 2 Oakmoor Ave, Blackpool, FY2 0EE.

UK Postage included. Europe add £0.75, or £2 if order includes Blank Disks. Overseas add £1.50 for Airmail, or £3.50 if order includes Blank Disks.

**DoSoft**

You'll Do it Better with DoSoft

## SUPER SOFTWARE SALE

Buy NOW and SAVE! SAVE! SAVE!

### The DoSoft Collection

UNBEATABLE OFFER! The latest versions of MegaTransfer, MegaUtility, MegaTape and ProSprite ALL on One Disk.

HALF PRICE £12.50 WOW!

### DoSoft Super Disk Kit

AS ABOVE but with 12 Xidex Precision Boxed Disks. A great start to get your programs on disk at a giveaway price!

SAVE! SAVE! SAVE! £19.99

### Mega MegaTape Savings

OUR FAMOUS Tape-to-Tape utility for one Datasette at an unbeatable price.

BUY NOW £5 BRILLIANT!

### Xidex Precision Disks

From the WORLD'S LEADING SUPPLIER—12 Double Sided, Double Density 5 1/4 Disks complete with sleeves, labels, tabs and FREE high impact plastic storage box.

TWELVE FOR ONLY £8.50!

FAST DISK UTILITIES • LOADERS • 2-MIN DISK COPY • FAST DISK FILE COPY • FAST FORMAT

HARDWARE TRANSFERS MULTI-PARTS • DUMPS HI-RES SCREENS

# Freeze - A Jolly Good Fellow?

*Freeze Machine is a combination of two of Evesham Micros utility programmes encapsulated within a single cartridge. Bringing together Freeze Frame MkV and Lazer MkII enables you to back up your programmes in a form which will reload in seconds rather than minutes.*

*By Eric Doyle*

**F**reeze Frame is designed to produce backups of any program that you own, including commercial programmes. This obviously raises the question of copyright and piracy (or theft as I prefer to call it). Evesham Micros are well within their legal rights to produce utilities such as this and would say publicly that they do not condone program theft. By stamping the legend **STRICTLY FOR PERSONAL USE** across their instruction booklet, they absolve themselves of any uses which the purchasers of the cartridge may put it to. The misuser of the cartridge is the thief.

It's a bit like buying a gun. The purchaser is bound by the law not to fire the weapon in such a way as to cause personal injury to someone. That doesn't mean that shootings don't occur and when one does the legal process swings into action against the user, not the manufacturer. This analogy holds out quite well, but I feel I must point out that there is no such thing in Law as accidental copying!

To own a backup you should also have the original program, if you don't then how can you plead innocence? If you steal a program then it is not just the company producing that package that suffers but the programmer. Your Commodore in no way condones the theft of games but we cannot ignore the fact that fast backup copies are businesslike.

As a journalist the main application for my home micro is for word processing. I favour the Superscript package but it takes 2 minutes 24 sec to set it up the way I want it. Not a long time, but it's over two minutes of not earning cash! Could a fast load help me out? Yes, with Freeze Machine it takes about 20 seconds using the Lazer loader and 50 seconds without it. Over a year this could increase my take-home pay by over £100, more than enough to cover the cost of the cartridge, plus there are all the other programmes I use ready to be backed up.

**"It's handy to be able to save and load all my development programmes at high speed and this is possible with Lazer"**

The Lazer cartridge has two reset buttons, one brings in the Freeze facility and the other toggles between the fastload and Lazerload menus.

In trials I was not convinced that Lazer was necessary for two reasons. Firstly, the fastload facility was not significantly slower than Lazer but secondly, and far more importantly, the Lazer program file is stored as a locked USR file. This means that either the cartridge or a 'boot' program is necessary to load it and it always loads at turbo speed. The effect of this is that when your disk drive becomes slightly misaligned or varies in speed later in its

life, all of your USR files will be useless until your drive is repaired. This can be a nuisance.

Turbo loaders are far more sensitive to speed variation than is the standard loading system. So a system which offers both alternatives is the belt and braces system for me. This means the fastloader in the Lazer cartridge.

Of course, backing up commercial programmes is just one use of the cartridge. For a programmer like myself it's handy to be able to save and load all my development programmes at high speed and this is possible with Lazer. I can also fast-format disks and use the DOS system to scratch and validate files. The only thing I miss is a built-in monitor which would be useful. I'm spoilt because I must admit to being the proud owner of Evesham Micro's miraculous Dolphin DOS system which makes Lazer look slow. Evesham claim a speed increase of over 20 times with Lazer but my tests using a standard C64 came nowhere near to this.

Inside the Lazer cartridge there is a very powerful utility set for your C64. It won't work with every piece of commercial software on the market but a large proportion of them can be backed up. At £28.95 it's a steal!

# Contributions

*So you own a Commodore? So you've  
written some programs? So why haven't you  
sent them to us?*

**Y**our Commodore is always on the look out for new programs, hints and tips, articles and even regular series. In fact if you have something that you think could be of use to other Commodore owners we want to hear about it.

So if you have got something which you think we may be interested in. How do you go about submitting it to us?

Below you will find a list of guidelines that will help us to deal with any item that you send in to us. We don't expect everybody to be the next William Shakespeare but if you do follow these simple rules then it will make our job a lot easier.

1) If possible all material sent to the magazine should be typed or printed out on a computer printer.

2) All text should be double spaced i.e. there should be a blank line between each line of text. You should also leave a margin of about 10 characters around the text.

3) On the very first page you should put the following:

Name of the article  
Machine that it is for  
Any extras required - disk, printer etc.  
Your name  
Your address  
Your telephone number

4) The top of every page should have the following information on it:

Abbreviation of the article title  
Your name  
The page number

For example, suppose you had submitted an article on C64 interrupts. You should put something like the following at the head of the page:

Interrupts/J.Smith/1

5) Please make sure that you do not make any additional marks on your text especially underlining.

6) Try and write in clear concise English, it does not have to be a work of literature but it must be comprehensible.

7) On the bottom of each page you should put the word MORE if there are more pages to the article or ENDS if it is the last page.

8) If possible, enclose a listing of all programs.

9) Under no circumstances use a staple to hold the pages together. Use a paperclip instead.

10) Programs should be included on either disk or tape. Make sure that you SAVE two copies of every program so that we have a better chance of loading them if problems occur.

11) Programs under 10 lines can be included in the text. If your program is longer than this you must enclose a disk or cassette.

12) If your article needs any artwork then supply clear examples of what is needed. We don't expect you to be an artist but we do need to see what is required.

13) Photographs, if necessary, must be either black and white prints or colour slides. We can take shots ourselves so don't worry about this too much.

14) Submissions of any length are welcome. If you have a five line routine that you think may be of use to someone else we welcome it just as much as a full blown six part series.

15) Payment varies quite a lot and depends on quite a number of factors, such as complexity of program, presentation of program, number of magazine pages it takes up etc. Payment is generally between £10.00 and £800.00.

16) All payments are made in the month that the magazine containing your article has appeared in print.

17) If we do find your submission suitable for inclusion in the magazine we will write to you giving the terms of publication, the rate of payment and an agreement form. Prompt return of this form will allow us to use your program as soon as possible.

18) If you want the program returning to you, should we find it unsuitable for publication, then you should enclose a stamped self addressed envelope.

19) The last and most important point to make is 'get writing', we are waiting for your articles.

**ACE2**  
THE ULTIMATE  
HEAD TO HEAD  
CONFLICT

# Using an Epson-type printer with the C64

*The Epson-Type printer is probably put to best use when used in conjunction with a word-processing program such as Commodore's own Easy Script.*

**I**nterfacing a C64 to your printer can sometimes be a real chore. It is necessary initially to obtain an interface cable to connect the C64's user port to the printer's Centronics interface. This can be bought for about £20 (including some interfacing software) or can be made for about £8 if you are handy with a soldering iron (see separate panel). *No expensive interface cartridges are necessary!*

Connect the printer to the C64 and load up Easy Script. On the initial screen you should enter a '1' in printer type and a 'C' when you are prompted for interface type. From then on the printer responds normally and you may use a number of extra command characters to exploit the various modes of the printer. Some details are found on the Easy Script disk in the 'MX/FX info' file which you can print out.

## Overcoming Problems in Basic

Listing BASIC programmes is a possible problem since Epson printers don't have the special Commodore

cursor/colour control symbols. However, overcoming this is not too difficult – load and run the BASIC extension program supplied with November's *Your Commodore*, load the program to be listed, and use the CODE command to convert the listing into a readable format without special codes. Now open a file to disk or tape and list the program as follows:

```
Disk: OPEN 2,8,2"0:programname.
      TXT,S,W" : CMD2 : LIST
Tape: OPEN 2,1,1,"Programname.
      TXT" : CMD2 : LIST
```

This writes the program as a text file. If you now use Easy Script you should be able to load this file and print it as normal. This has the added advantage that your listing will have pagebreaks that don't print over the perforations. Also you can re-format the listing to indent FOR/NEXT loops, etc.

## Without the Basic Extension

If you don't have the BASIC extension

then don't worry, any special characters will usually appear in the listing as blank spaces. If you don't have a word processor then it is possible to use the interface software supplied with the cable. Or run this short program by P. Cornes which echoes all screen output to the Centronics printer (activated/deactivated by SYS 49152:

```
10 FOR C = 49152 to 49238 :
    READ B
20 POKE C,B : NEXT C
30 DATA 162,0,142,1,221,202,142

Screen shots are taken from the C64 version.

## Making a Centronics Cable

If you feel that you can tackle fairly fine soldering then you can make your own Centronics cable quite easily. You will require:

1 × Amphenol 36 way male Centronics plug for the printer end.  
1 × Commodore 64 user port edge connector for the C64 end.

3m × 12 core shielded round cable. (These should all be available from hobbyist electronic shops.)

The two plugs must be wired as follows:

Printer end

Computer end

### PRINTER

### C64

1	M
2	C
3	D
4	E
5	F
6	H
7	J
8	K
9	L
10	B
16	A

Please note: Making the lead longer than 3m is likely to cause problems (technically known as 'Skew errors').

## Easy Script and Epson-type Printers

If you have successfully connected

your C64 to an Epson-type printer you may find it helpful to know how to get all of the printer's special functions to operate from Easy Script. Some of the special characters required to operate an Epson printer are integral to Easy Script since Precision Software had Epsons in mind, when they designed the program.

These features are accessible by pressing <f1> and then one other key. Other functions must be sent to the printer as a row of characters, usually commencing with the *ESCAPE* character which is produced by pressing <f1> and then the up-arrow which then appears as a reverse 'E'. Escape and '4', for instance, selects italic printing.

Some functions require the use of other character codes which are not available from the keyboard such as

the ASCII character whose code is 0. In order to use these it is necessary to predefine a special character for each code and assign that character the required decimal value.

Easy Script provides up to ten such special characters which can be used by pressing <f1> followed by one of the numbers 0 to 9. To define, say a character of ASCII value 65 to key 6 and a value of 67 to key 8 type a line in Easy Script as follows:

```
<f3>6=65:8=67<return>
```

Now pressing <f1> followed by a '6' should produce a reverse '6'. When printed this character will act as if it were ASCII 65 i.e. a capital 'A'. It is useful to define 0=0:1=1 since many functions use these ASCII values. Some other printer commands are produced by <f3> plus a short command.

## Controls for Epson-Type Printer with Easy Script

### Enhanced

<f1>/[ and <f1>/]

### Emphasised

<f1>/ ( and <f1>/ )

### Underlined

<f1>/; and <f1>/:

### Double

<f1>/% and <f1>/%

### Condensed

<f1>/< and <f1>/>

### Superscript

<f1>/' each character.

### Superscript on constant

esc 'S' 0 until

### Superscript off

esc 'T'

### Subscript

<f1>/, each character

### Subscript on constant

esc 'S' 1 until

### Subscript off

esc 'T'

### ELITE

<f3>/pt10

### PICA

<f3>/pt12

### Italic

esc '4'

### Italic off

esc '5'

### Proportional on

esc 'p' 1

### Proportional off

esc 'p' 0

### NLQ on

esc 'x' 1

NLQ off	esc 'x' 0
Disable paper-end error	esc '8'
Enable paper-end error	esc '9'
Initialize printer	esc '@'
8 LPI line spacing	<f3>/lp8
6 LPI line spacing	<f3>/lp6
7/72" line spacing	esc '1'
Line spacing n/72"	esc 'A' n
Line spacing n/216"	esc '3' n
Standard density graphics	esc 'K' n <sub>1</sub> n <sub>2</sub>
Double density graphics	esc 'L' n <sub>1</sub> n <sub>2</sub>
D/d'sity D/speed graphics	esc 'Y' n <sub>1</sub> n <sub>2</sub>
Quad density graphics	esc 'Z' n <sub>1</sub> n <sub>2</sub>
Backspace	<f1>/<backarrow>

Most of these commands are self-explanatory, but a few need explanation. Backspace can be used to produce special characters by combining two others e.g. using = and / to produce ≠. First type '=' then <f1> backarrow then '/'. This will produce the new symbol.

Producing single graphic characters is done in a similar way to user-defined graphics on the C64. The characters are designed on a grid 8 dots high by up to 65535 dots wide. Suppose we want to define a lower case Greek DELTA:

First we design:

0	0	*	*	*	0	0	×	128
0	*	0	0	0	*	0	×	64
0	0	*	0	0	0	0	×	32
0	*	*	*	0	0	0	×	16
*	0	0	0	*	0	0	×	8
*	0	0	0	*	0	0	×	4
0	*	*	*	0	0	0	×	2
0	0	0	0	0	0	0	×	1
---	---	--	---	--	---	---		
12	82	178	146	140	64	0		

Note that it requires 7 ASCII numbers to define this character. 7 in Low byte/High byte format is 7 and 0 (i.e.  $(1 \times 7) + (0 \times 256) = 7$ ).

Now we define the ASCII characters for each column, plus two for the numbers of columns to be used:  
 <f3>0=0:1=1:2=7:3=12:4=82:5=178:6=146:7=140:8=64

To produce the delta in single density graphics we now type:

<esc>K<f1>2<f1>0<f1>3<f1>4<f1>5<f1>6<f1>7<f1>8<f1>0

To produce the delta in double density graphics we must have double the number of columns so we define:

<f3>2=14

and type:

<esc>L<f1>2<f1>0<f1>3<f1>3<f1>4<f1>4<f1>5<f1>5<f1>6<f1>6<f1>7<f1>7<f1>8<f1>8<f1>0<f1>0

The same principle holds for quad density graphics.

One final trick - micro-lettering! This is achieved by using subscripts (which are half-height) with condensed mode characters and also reducing the line feed to about half the normal distance.

Select Condensed mode by using <f1><.

Select Subscript by using esc'S'<f1>0'.

Choose a line spacing of about 14/72" and therefore define <f1>9 as 14 by:

<f3>9=14 return

Select 14/72" linespacing by using esc'A'<f1>'9'.

The result, as you can see, is completely tiny. Goodbye and enjoy writing your letters...

# Shadow Boxing

*Use the shadowy area of your computer's memory to improve your Basic storage space.*

*By Rick Astley*

A rather back-handed compliment that may be paid to the C64 is that it has encouraged many a programmer to learn machine code, the reason being that its space-saving Basic is rather slow for some types of program.

However, there are programmers who do not necessarily agree that a move to machine code is a progressive step. To meet these programmers' needs, many machine code routines have been written which augment the C64's Basic. The following describes three more.

The programs have been written in recognition that the 64's 40K of Basic bytes can be severely drained by the need to store data. This data may represent numerical or text information, sprites or perhaps screen data and associated colour memory. The 4K of memory from 49152 to 453247, whilst easy to address, is nevertheless rather limited. The programs we are to meet here, known by mnemonics MEX, MAVE and SYSSY, make the 8K RAM, hidden in the shadow of the Basic interpreter, much more accessible in Basic.

The shadow memory referred to, between 40960 and 49151 and known as LORAM, is actually perfectly simple to POKE to in the normal way. The C64 knows that it is futile to try to write to ROM, and so responds to any attempt to do so by switching the ROM out and the RAM in to receive

the POKE. The Catch 22 with LORAM is that in order to PEEK it, you need to switch the ROM out; however, this ROM is the Basic interpreter and with it switched out, the PEEK instruction cannot be understood.

The answer is to utilise a short machine code program which can access the Shadow RAM. The program here is called MEX, short for Memory Exchange. MEX will exchange any nominated segment of memory for any other of identical size. If a chosen area includes that from 40960 to 49151, then LORAM will be exchanged. This allows the Basic programmer to LOAD or POKE data to LORAM (sprite data perhaps or a screen), and when required, call MEX and swap it for similar data which is not required for the moment, and which is in memory-accessible to Basic. No data is lost; calling MEX again will re-exchange each byte back to its original place, or to some other position if you change the parameters.

Before using MEX it is necessary to decide on three pieces of information: the number of 256-byte blocks to be exchanged and the two addresses from which they are to start.

As an example, suppose you wished to swap the 8k bytes from 32768 to 40959 for that in LORAM from 40960 to 49151 inclusive. First, remember that the area 32768 to 40950

should have been protected from being over-written by Basic if you want to use it for data storage. Do this by POKEing location 52, the bottom of string storage, and 56, the highest address used by Basic, with 128 (because  $32768/256=128$ ) before RUNing any programs. The size of the memories to be exchanged is 8k, which equates to  $8*1024$  or 8192, so the number of 256 byte blocks involved is  $8192/256$ , which is 32.

Your program line may look something like this:

```
5 POKE 52,128: POKE 56,128:
  SYS50000,32768,40960,32
```

MEX is wholly portable and, although it has been put at 50000, and is called by SYS 50000, it may move to wherever you wish by changing line 10 of the basic loader, and modifying the SYS command accordingly.

## Saving from Memory

MAVE is the Memory, SAVE program. Unlike MEX, which is RUN from within your program, MAVE uses a small amount of your memory but is not needed within the program. However-like the other two programs it may be moved to any convenient area in the manner explained later. If using a disk drive, the cassette buffer is available to you and in this case

MAVE is outside your main program/data area.

MAVE is called by the immediate command:

SYS 50075,SA,EA,"PN",DN

where: SA is the start address (usually 0801); EA is your end address + 1; PN is your program name; DN is the saving device number (1 for cassette or normally 8 for disk).

PROGRAM: SHADOW

```

```

Where MAVE differs from other SAVE utilities is that, should you have data stored in LORAM, then it will save this, rather than the Basic interpreter ROM.

## Overcoming LOAD Problems

Unfortunately, there is a disadvantage to using a cassette when LOADING to LORAM. The C64 loading system will LOAD your data into LORAM, but this data is recorded twice on your tape, and at the second pass the system compares the tape data with that supposedly LOADED on the first pass. This is normally a good check for LOAD errors, but when loading to LORAM the check is made, not against the contents of that area, but against the ROM above it. The result is an error message which you can ignore in immediate mode, but which stops a program if the LOAD is made from within it.

LOADING data into high memory from disk can also be a source of annoyance, but this time, the difficulty occurs in immediate mode rather than from within programmes. The problem reveals itself as an out of memory error, the system assuming that because the last data was high in memory, everything below it is full.

SYSSY overcomes both these quirks. SYSSY starts 155 bytes after MEX and so, if you keep the basic loader start at 50000 and then make the variable SY equal to 50155, you call it as follows:

```

SYSSY,"NAME",1,1
for tape or
SYSSY,"NAME",8,1
for disk.

```

MEX, MAVE and SYSSY have been kept quite simple, using many routines already resident in the 64, so that they will not take hours to type in via the single Basic loader SHADOW. Nevertheless, it is worth testing them, and practicing their use with the short Basic programmes listed here called SCREEN TEST 1 and SCREEN TEST 2.

## Testing

First LOAD and RUN SHADOW and, if the computer responds with "OK", delete the Basic loader with NEW. Next type in SCREEN TEST which operates as follows:-

Line 5 sets the character colours. This line is required only on older C64s. If POKE 1024,160 on a freshly switched-on computer does not produce a square in the top left hand corner, you will need this line.

Line 10 sets the variable MEX to the start address of the program;

Line 20 draws a series of vertical lines onto the screen;

Lines 30 through 60 draw a similar set of horizontal lines in LORAM;

Line 70: the SYS command directs the program to the routine MEX, the memories to be exchanged to start at 1024, (the screen) and 40960, (the start of LORAM), and the amount of memory involved to be 4 blocks of 256 bytes which equates to 1024, exactly one screen's worth of data;

Line 80 ensures that the exchange occurs whilst the flying spot, which traces your T.V. picture, is off the screen;

Line 90 loops back to re-exchange the data.

SAVE and RUN SCREEN TEST. Note how slowly the vertical lines are drawn in Basic and wait a little longer for the horizontal lines to be drawn in LORAM. As soon as MEX is called, however, the speed of the machine code program is immediately evident, as it alternately exchanges the vertical and horizontal lines from screen to LORAM. In fact, the speed of interchange produces a chequered pattern which is even more apparent if line 80 is deleted.

Now press RUN/STOP and SAVE the pattern in LORAM with:

SYS50075,40960,41984,"PATTERN" 1

If using disk, then the last digit should be set to 8. As with standard SAVE routines you may add a final ,1 as a secondary address to ensure that the pattern LOADs back to the memory from which it was SAVED. This can also be achieved by adding ,1 when LOADING.

Now modify SCREEN TEST 1 to make program called SCREEN TEST 2. In the new program:

Line 1 is simply an aid to memory; Line 10 ensures the program RUNs from line 20 after LOADING "PATTERN";

Line 15 has to be added. SYSSY calls the LOAD routine, and is actually SYS SY where SY = 50155;

Lines 20 to 50 are modified so as to draw a diagonal pattern, which

contrasts with the horizontal or vertical lines, whichever were LOAded with "PATTERN".

Line 60 is no longer used, and should be deleted;

Lines 70 to 90 remain unchanged.

When it is RUN, SCREEN TEST 2

#### PROGRAM: SCREEN TEST1

```
70 1 REM SCREEN TEST
EF 5 POKE 53281,14:PRINT CHR$(1
47):POKE 53281,6
33 10 MEX=50000
EB 20 FOR X=1024 TO 2023 STEP 2
:POKE X,32:POKE X+1,160:NEXT
B5 30 FORX=40960 TO 41920 STEP
80
C5 40 FORY=0 TO 39:POKE X+Y,32:
NEXT
D1 50 FORY=40 TO 79:POKE X+Y,16
0:NEXT
BE 60 NEXT
C4 70 SYS MEX,1024,40960,4
F9 80 WAIT 53265,128:WAIT 53265
,128,128
F4 90 GOTO 70
```

should first LOAD the SAVED "PATTERN" without the error message which would normally occur from a tape LOAD into LORAM.

Next the diagonal pattern will be drawn, after which MEX starts swapping the pattern LOAded into LORAM with the diagonals drawn by lines 20 to 50.

In the above exercise, MEX, MAVE, and SYSSY have all been used. Each, however, may be loaded elsewhere in memory, either independently, or as a single program. To do this, change line 10 of the Basic loader. Once loaded, MAVE can be used to SAVE each one as a machine code program, as was done with "PATTERN".

Note the position of each program when loaded using SHADOW:

MEX runs from 50000 to 50074;

MAVE from 50075 to 50154;

SYSSY from 50155 to 50190.

The ability to use LORAM gives

the Basic programmer continuous RAM from 2048 to 53247, save for the 190 bytes used to store the utilities described here. Used effectively, more elaborate Basic programmes can be produced, hopefully compensating for that oh-so-evident lack of speed.

#### PROGRAM: SCREEN TEST2

```

#### MESSAGE SCROLLER

1/1

How often have you wanted to put a scrolling message across your screen?

Presented here is a short Basic routine that will enable you to place a scrolling message anywhere on your screen with ease.

The routine requires that the message to be scrolled is held in the variable A\$. The delay between printing each character should be assigned to DEL. The width of the message is held in variable WD and the positioning of the string is held in D\$.

The positioning of the string is done by placing a HOME and a number of cursor downs and lefts in the string.

Note A\$ and D\$ should not exceed 255 characters in length or a string too long error will occur.

Alexander Chambers  
Brislington

1110 GOTO1070
```

# TOTAL BACK-UP POWER CBM 64/128

PERIPHERALS..THE FINAL FRONTIER..OUR MISSION..TO BOLDLY  
GO WHERE NO OTHER UTILITIES HAVE GONE BEFORE

CAPTAIN'S LOG...THE TOTAL SOLUTION TO ALL YOUR BACK-UP NEEDS... THE ULTIMATE BACK-UP CARTRIDGE HERE NOW !!

## REPORT ON FINDINGS

Action Replay Mk III is more powerful, more friendly and will back up more programs than any competing utility by taking a 'Snapshot' of the program in memory so it doesn't matter how it was loaded... from disk or tape, at normal or turbo speeds... the results are the same - Perfect!!! Amazing!!!

## STARBASE UPDATE

- Simple to use: just press the button and make a complete backup: Tape to Tape, Tape to Disk, Disk to Disk, Disk to Tape. - THE PROCESS IS AUTOMATIC - JUST GIVE THE BACKUP A NAME.
- All backups will reload at turbo speed independently of the cartridge.
- Dual speed tape turbo system. Programs can load up to 3 times faster than commercial turbos - that's over 10 times normal Commodore speed.

- Freeze the action then view the program with the monitor feature. Add pokes for infinite lives etc. Then restart the game or backup - ideal for customised versions of your games.
- Picture Save. Save any multi-colour. Hires screen to disk or tape. Compatible with Blazing Paddles, Koala, Slideshow etc.
- Fully compatible with 1541, 1541C, 1570, 1571, and ehancer or any CBM compatible data recorder.
- For C64, 64C, 128, 128D (in 64 mode).
- Unique Sprite Monitor. Freeze the Action and view all the Sprites, watch the animations scroll across the screen. Save Sprites to disk or tape. Customise your games by loading sprites from one game to another - then restart the program or make a backup.

- Compatible with fast DOS and Turbo ROM systems.
- Backup process in turbo speed - faster than any rivals.
- Special compacting techniques. Each program is saved as a single file.
- Transfers multistage tape programs to disk - more than any other cartridge - even the extra stages are turbo load - a unique feature.
- Sprite Killer! make yourself indestructible by disabling Sprite collisions in games.
- Fast disk format (20 secs).
- Built-in unstoppable reset button.

ONLY  
**£29.99**  
POST FREE

**ACTION  
REPLAY  
MK III**

**PLUS Built In  
FASTLOADER**

Action Replay III even has a built in disk fast loader which speeds up loading 5 times. Uses no memory - invisible to the system. You could pay £20 alone for this feature.

**WARP 25  
BREAKS THROUGH  
THE 10 SECOND BARRIER!**

Action Replay III now comes with an amazing new Disk Bootloader that will reload your backups at TWENTY FIVE TIMES normal speed. The fastest disk turbo yet devised!! There are NO CATCHES! WARP 25 works with ALL your games. Works with any disk drive. No pre-load required - No hardware modifications necessary - No user knowledge required - programs load INDEPENDENTLY. LOADING TIME - 9.8 SECONDS (for a typical game saved by WARP 25 in conjunction with ACTION REPLAY III). This time is for the COMPLETE load process from start to finish. Reload is entirely INDEPENDENT of the cartridge or any other hardware. Compare these (accurate!) figures for some rival backup systems:

SYSTEM	LOAD TIME	PROGRAMS PER DISK	CARTRIDGE REQUIRED?
ACTION REPLAY MK III SAVED WITH NORMAL TURBO	25 SECS	THREE	NO
ACTION REPLAY MK III SAVED WITH WARP 25	9.8 SECS	THREE	NO
FREEZE FRAME (MK IV)	40 SECS	TWO OR THREE	NO
FREEZE FRAME (LAZER)	25 SECS	TWO	YES
EXPERT SYSTEM	30 SECS	THREE	NO

All purchasers of Action Replay III will receive WARP 25 FREE with their cartridge. Existing Action Replay III owners can obtain WARP 25 Disk turbo by sending £2.50. post free. (No need to send your cartridge). OR obtain it FREE on the Enhancement Disk (£7.95).

### THE ACTION REPLAY ENHANCEMENT DISK

The best collection of tape to disk transfer routines for nonstandard multiload programs (eg Dragons Lair I and II, Championship Wrestling, Summer Games, Ace of Aces, Gauntlet, Supercycle, Marble Madness, World Games). 31 titles in all. Uses our unique parameter system. No user knowledge required. Turbo load throughout. NOTE: Standard cartridge transfers normal multiloaders eg Winter Games etc. etc. Disk includes file copy and disk backup utilities. PRICE £7.95 with FREE! Multicolour Slideshow for display of loading screens, hires pictures etc. saved by Action Replay. Great entertainment!

### PERFORMANCE GUARANTEE

100% Success? Rival Claims? Who's Kidding Who? Action Replay Mk III will backup any program which any other cartridge can backup - and more! It also has an unmatched range of features. Consider 'Freeze-Frame' for example, which uses more disk space, saves at slower speed, has slower tape loader, has no built in disk fast loader, no picture, Sprite or restart features and costs £10 more than Action Replay. So who's kidding who? Buy Action Replay Mk III. If you find that it does not live up to our claims return it within 7 days of receipt and your money will be refunded.

USUALLY SAMEDAY DESPATCH ON ALL ORDERS.

# DATTEL ELECTRONICS

## 3 SLOT MOTHERBOARD

Save wear and tear on your Expansion Port

- ☐ Accepts 3 cartridges. ☐ Onboard safety fuse.
- ☐ Switch in/out any slot. ☐ High grade PCB.
- ☐ Fully buffered. ☐ Reset button.

**ONLY £16.99**

## DATA RECORDER

- ☐ Quality Commodore compatible data recorder.
- ☐ Pause control. ☐ Suitable for 64/128.
- ☐ Counter. ☐ Send now for quick delivery.

**ONLY £24.99**

## SMART CART

Now you can have an 8K or 32K cartridge that you program like RAM then acts like ROM!

- ☐ 8K or 32K pseudo ROM.
- ☐ Battery backed to last up to 5 years (lithium battery).
- ☐ Simply load the program you require - then flick the switch. The cartridge can then be removed just like a ROM cartridge.
- ☐ Make your own cartridges including autostart types - without an EPROM burner.
- ☐ Can be switched on or off board via software.
- ☐ I/O 2 slot open for special programming techniques.
- ☐ 32K version has 4 x 8K pages.
- ☐ Some knowledge of M/C is helpful - but full instruction is provided.

**8K VERSION £14.99**  
**32K VERSION £29.99**

## SMARTCART UTILITIES

A series of utility programs for use with Smartcart. Simply load in the program and you have a powerful cartridge. When you have a different requirement - load in another program and you have a new cartridge. The process takes seconds, and can be repeated any number of times.

We intend to release a range of programs. The first available are:

## DISKMATE II

- ☐ all the features of Diskmate II (see ad).
- Loaded in seconds - with full instructions. **ONLY £9.99**

## PRINTER IV

Now you can turn your MPS 801 into 4 printers in one!!

- ☐ Alternative character set ROM - fitted in seconds.
- ☐ All four sets have true descenders.
- ☐ 100% compatible with all software.
- ☐ Descender. ☐ Eclipse.
- ☐ Scribe. ☐ Future.
- ☐ Choose any set at the flick of a switch.

"For anyone who uses their printer often this chip is a must. It's quick and easy to use and the end results are impressive" - Your Commodore, Jan 87.

**ONLY £19.99**

## BLAZING PADDLES

A complete lightpen/graphics illustrator package.

- ☐ A fully icon/menu driven graphics package of a calibre which should cost much more.
- ☐ Complete with a fibre optical lightpen system for pin point accuracy.
- ☐ Multi feature software including:
  - Range of brushes ● Airbrush ● Rectangle ● Circle ● Rubberbanding ● Lines ● Freehand
  - Zoom mode ● Printer dump ● Load/save ● Advanced colour mixing - over 200 hues!!
  - Cut and paste allows shapes/windows/pictures to be saved to/from tape/disk.
- ☐ Blazing Paddles will also work with many other input devices including: Joysticks, Mice, Graphics Tablets, Trackball etc.
- ☐ Pictures can be saved from Action Replay and edited with Blazing Paddles.

Complete Blazing Paddles & Lightpen **ONLY £24.99**

Blazing Paddles available separately for **£12.99**

## TOOLKIT IV

The ultimate disk toolkit for the 1540/1541

- ☐ A disk toolkit is an absolute must for the serious disk hacker. Toolkit IV has more features than most for less.
- ☐ DISK DOCTOR V2 - Read and write any track and sector including extra and renumbered tracks. Repair damaged sectors. Look underneath read errors.
- ☐ HEADER/GAP EDITOR - Decodes and displays ALL header information including off bytes and header gap. Rewrite the entire header and header gap. Renumber sectors. Also edit any sector tail gap.
- ☐ DISK LOOK - Sort directory. Recover lost files. Display file start/end addresses. Disassemble any file program directly from the disk to SCREEN or PRINTER including undocumented opcodes. Edit Bam. Much, much more.

## RAM DISK

- ☐ Turn your Smart Cart into a 32K RAM/disk.
- ☐ 32K of instant storage area for files/programs.
- ☐ Load/save instantly.
- ☐ Disk type commands: load, save, directory, scratch.
- ☐ Program data retained when computer is switched off!
- ☐ Full command set with instructions. **ONLY £9.99**

## TURBO ROM II

Turbo Rom II is a replacement for the actual kernal inside your 64. It provides superfast load/save routines.

- ☐ Loads most programs at 5-6 times normal speed.
- ☐ Saves at 5-6 times normal.
- ☐ Improved DOS support including 10 sec format.
- ☐ Programmed function keys: load, directory, old, etc.
- ☐ Return to normal kernal at flick of a switch.
- ☐ FCOPI - 250 block file copier.
- ☐ FLOAD - special I/O loader.
- ☐ Plus lots more.
- ☐ Fitted in minutes - no soldering usually required. (On some 64's the old ROM may have to be desoldered).

**ONLY £14.99**

## DIGITAL SOUND SAMPLER

- ☐ The new sampler allows you to record any sound digitally into memory and then replay it with astounding effects.
- ☐ Playback forwards/backwards with echo/reverb/ring modulation etc.
- ☐ Now with full sound editing module to produce outstanding effects.
- ☐ Full 8 bit D to A and ADC conversion.
- ☐ MIDI compatible with suitable interface. (I.e. Datel unit for £29.99, see ad).
- ☐ Live effects menu includes real time display of waveforms.
- ☐ Line in/mic in/line out/feedback controls.
- ☐ Powerful sequencer with editing features.
- ☐ Load/save sample.
- ☐ Up to 8 samples in memory at one time.
- ☐ Tape or disk (please state).
- ☐ Complete software/hardware package **£49.99**
- ☐ Com-Drum software is available separately at **£9.99** to turn your Sampler II into a Com-Drum system as well as a sampling system.

## COM-DRUM Digital Drum System

- ☐ Now you can turn your computer into a digital drum system. ☐ Hardware/software package.
- ☐ 8 digital drum sounds in memory at one time.
- ☐ Complete with 3 drum kits.
- ☐ Real drum sounds - not synthesised.
- ☐ Create superb drum rhythms with real and step time. ☐ Full editing. ☐ Menu driven.
- ☐ Output to hi-fi or through tv speaker.
- ☐ Load/save facilities. (state tape or disk)

**ONLY £29.99**

## COM-DRUM EDITOR

- ☐ 24 drum sounds supplied on disk to enable you to construct your own drum kit.
- ☐ Re-arrange sounds supplied with a Com-Drum to make new kits.
- ☐ With sound sampler hardware you can record your own kits. ☐ Load/save facilities.

**ONLY £4.99** disk only

## ROBOTEK 64

Model & Robot Control made easy

- ☐ Robotek 64 is a comprehensive hardware/software package which enables you to connect your 64/128 to the outside world.
- ☐ 4 output channels - each with onboard relay
- ☐ 4 input channels - each fully buffered TTL level sensing.
- ☐ Analogue input with full 8 bit conversion.

- ☐ Voice input for voice control.
- ☐ Software features: test mode/analogue measurement/voice activate/digital readout etc.
- ☐ Excellent value! **ONLY £39.99**

including hardware/software/mic etc. (State tape or disk)

# DATTEL ELECTRONICS

## 256K SUPEROM EXPANDER

- ☐ Now you can select from any of 8 32K EPROMs instantly.
- ☐ 8 sockets to accept upto a 32K EPROM in each.
- ☐ On board operating system - no programs to load.
- ☐ Program your own EPROMs using our EPROM programmer.
- ☐ No need to have loads of cartridges - just make a selection from the Superom menu.
- ☐ Directory of utilities on power up.
- ☐ Fully menu driven on power up.
- ☐ Select any slot under software controls.
- ☐ Unique EPROM generator feature will take your own programs - basic or m/c and turn them into autostart EPROMs. (EPROM burner required).
- ☐ Accepts 2764/27128/27256 EPROMs.
- ☐ On board unstoppable reset.

**ONLY £29.99**

## 4 WAY KERNAL BOARD

- ☐ This board fits in place of the kernal in your 64 and accepts a 16K or 32K replacement kernal giving 2 or 4 different operating systems.
- ☐ Just flick the switch supplied to select between systems.
- ☐ This is a carrier only - ready to accept your own chip.
- ☐ Now you can have all your different systems available at one time.
- ☐ Full instructions. ☐ Fitted in minutes.

**ONLY £8.99**

## 5 WAY KERNAL EXPANDER

- ☐ A multi carrier board accepts up to 3 chips.
- ☐ Fits in place of original kernal of 64.
- ☐ Three sockets - one for the original kernal plus two others each accepting a 16K chip - that's 5 operating systems available at the flick of a switch!
- ☐ Fitted in minutes.
- ☐ Full instructions.

**ONLY £12.99**

## RESET CARTRIDGE

- ☐ Unstoppable reset button.
- ☐ Resets even so called "unstoppable" programs.
- ☐ Add pokes from magazines etc.
- ☐ Fits in cartridge port.
- ☐ Simply plug in.

**ONLY £5.99**

## QUICKSHOT TURBO™

- ☐ Top quality fast action.
- ☐ Top & trigger fire buttons.
- ☐ Rapid fire/auto action.
- ☐ Suction feet for one handed action.
- ☐ Extra hardwearing.

**ONLY £12.99** for 64/128

**ONLY £13.99** for C16

## QUICKSHOT II

- ☐ World's top selling joystick.
- ☐ Top & trigger fire buttons.
- ☐ Rapid fire control.
- ☐ Suction feet.

**ONLY £7.99** for C64/128

**ONLY £8.99** for C16

## 16K EPROM BOARD

- ☐ Accepts 2 x 8K EPROMs.
- ☐ Switchable to configure as 2 x 8K or 16K or off.
- ☐ On board unstoppable reset.
- ☐ Full instructions.

**ONLY £8.99**

## DISK NOTCHER

- ☐ Quickly and easily double your disk capacity.
- ☐ Use both sides of your disks.
- ☐ Simple to use.
- ☐ Takes seconds.

**ONLY £4.99**

## DEEP SCAN BURST NIBBLER™

- ☐ The most powerful disk nibbler available anywhere, at any price!
- ☐ Burst Nibbler is actually a two part system - a software package and a parallel cable to connect the 1541/1570/1571 to 64/128 (state type).
- ☐ What gives Burst Nibbler its power? Conventional nibblers have to decode the data from the disk before it can transfer it using the serial bus - when non standard data is encountered they are beat. Burst Nibbler transfers data as raw GCR code via the parallel cable without the need to decode it so you get a perfect copy of the original.
- Will nibble upto 41 tracks. ● Copy a whole disk in under 2 minutes. ● Full instructions.
- Regular updates - we always ship the latest. ● Fitted in minutes - no soldering usually required.
- Full or 1/4 tracks. ● No need to buy parallel cable if you have Disk Demon/Dolphin etc.
- Cable has throughbus extension for other add ons.
- ☐ Whether to choose FastHack'em or Burst Nibbler? Fast Hack'Em is unbeatable value as an "all-rounder" - with nibblers, 1 or 2 drive copy, format, file copy, 1571 copy etc. etc., so if you have a more general requirement perhaps FastHack'Em is for you. Burst Nibbler is a pure nibbler second to none, for the reasons stated. So if it's just making backups you are interested in, there is no other product to beat it.

**ONLY £24.99 COMPLETE**

**SOFTWARE ONLY £12.99 CABLE ONLY £14.99**

## EPROMMER 64™

- ☐ A top quality, easy-to-use EPROM programmer for the 64/128.
- ☐ Fully menu driven software/hardware package makes programming/reading/verifying/copying EPROMs simplicity itself.
- ☐ Will program 2716, 2732, 2764, 27128 and 27256 chips, 12.5, 21 or 25 volts.
- ☐ Fits into user port for maximum compatibility with cartridges/Superom Board etc.
- ☐ Full feature system - all functions covered including device check/verify.
- ☐ We believe Eprommer 64 is the most comprehensive, most friendly and best value for money programmer available for the 64/128.
- ☐ Ideal companion for Superom Board, Cartridge Development System, our kernal expanders or indeed any EPROM base project.
- ☐ Comes complete with instructions - plus the cartridge handbook.

**ONLY £39.99 COMPLETE**

# DATTEL ELECTRONICS

## PROFESSIONAL DOS™ MIKROTRONIC £64.99 POST FREE with Disc Demon operating system "The world's fastest parallel operating system"

- ☐ Loads a typical 202 block program file in under 3 seconds!
- ☐ 60x faster load (PRG files).
- ☐ 25x faster load (SEQ files).
- ☐ 20x faster save (PRG files).
- ☐ 20x faster save (SEQ files).

### PLUS AN ADVANCED COMMAND STRUCTURE INCLUDING:

- ☐ Fast format — up to 40 tracks (749 blocks).
- ☐ 16 function keys: list, run, load, directory, format, save, old, verify, etc.
- ☐ Flood will fastload files up to 250 blocks (other similar systems will only cope with 202 blocks).
- ☐ Number conversion. ☐ Reset.
- ☐ Unique built in file copier will copy files up to 250 blocks like lightning — multiple copy options — perfect for copying Action Replay files.
- ☐ Highly compatible with commercial software — can be switched out for non compatible programs.
- ☐ Perfect for use with Action Replay 3 — a typical AR3 backup will reload in about 3 seconds — yes 3 seconds!
- ☐ Speeds up other DOS functions including verify, scratch etc.
- ☐ Comes complete with superfast file and whole disk copier free!
- ☐ Screen on or off during loading.
- ☐ Enhanced command set — over 30 new commands.
- ☐ Easily fitted — Disk Demon plugs inside the 1541 and the new operating system chip plugs inside the C64/128. Fitting takes only minutes and usually requires no soldering.
- ☐ User port throughbus supplied free — you could pay \$15.00 for this alone.
- ☐ Supplied complete — no more to buy.
- ☐ Works on C128/1541 in 64 or 128 mode.

## FAST HACK'EM™

The Ultimate Disk Copier/Nibbler for C64/128

C128 version  
**£69.99**

- ☐ MULTI-MODULE SYSTEM — ALL ON ONE DISK
  - ☐ SINGLE 1541 MODULE
  - AUTO NIBBLER: Copy an entire protected disk in 3 minutes. Automatically senses type of protection and treats it as normal data to produce working copy.
  - NIBBLER: Copy an entire disk in 2 minutes. As above but parameters can be set manually.
  - FAST COPY: Copy a disk in under 2 minutes.
  - FILE COPY: Copy and file in 9 seconds.
  - ☐ 1541 PARAMETERS MODULE
- This is the module that gives Fast Hack'em its power. The parameters module contains dozens of "Parameter Keys" that are used to unlock those heavily protected programs. Each parameter is designed for a particular software brand or even a particular program. Other copy programs may make strong claims, but without special parameters they just can't cope. Datel will be offering updates to Fast Hack'em on a quarterly basis, featuring 20-50 new parameters plus other improvements as they're made. Prices to be \$6 plus old disk.
- ☐ 1541 PARAMETERS MODULE
  - AUTO NIBBLER: Copy an entire unprotected disk in under 1 minute. Features auto track/sector analyzer.
  - FAST COPY: Copy entire disk in 36 seconds with verify.
  - AUTOMATIC FASTCOPY: As above but with completely automatic operation. In fact once set up doesn't even need the computer. A must for duplicating disks on a large scale.
- ONLY £19.99**

## DISKMATE II

The Disk Utility Cartridge

- ☐ Disk fastload cartridge.
- ☐ Up to 5 times faster.
- ☐ Fast save. ☐ Fast format (10 secs).
- ☐ Improved DOS — single stroke commands — load/save/dir/old etc.
- ☐ Redefined function keys for fast operation of common commands.
- ☐ Powerful toolkit commands including: old/delete/merge/copy/append/autonum/linesave etc.
- ☐ Plus a full machine code monitor — too many features to list but it has them all!
- ☐ Special switching techniques make Diskmate invisible to the system. Therefore it is a more compatible fastloader than other types.
- ☐ Diskmate II is \$14.99.

### Special Offer!!

Diskmate II can be purchased on the same cartridge as Action Replay III for **ONLY £39.99**

## MIDI 64

A Full Midi Interface for the 64/128 at a realistic price

- ☐ MIDI in. ☐ MIDI thru. ☐ 2 x MIDI out.
- ☐ Compatible with most leading software packages including: Sell, JMS, Advanced Music System, Joreth, Steinburg etc.

**ONLY £29.99**

## MOUSE

- ☐ CBM 64/128 mouse.
- ☐ Wide compatibility with software including: Blazing Paddles.
- ☐ Works by mimicking joystick so will work in any joystick application including graphic packages only designed for joystick.
- ☐ Functions on either joystick port.
- ☐ Optical system operation.

**ONLY £24.99**

## CHIPS

- ☐ 27128 **£3.00 EACH**
- ☐ 27256 **£4.50 EACH**

## CARTRIDGE DEVELOPMENT SYSTEM

- ☐ All the necessary parts to produce an 8K/16K auto-start cartridge.
- ☐ Top quality PCB. ☐ Injection moulded case.
- ☐ Reset switch. ☐ 16K EPROM.
- ☐ "Cartridge Handbook" gives full details and tips on building and configuring the cartridge for many uses.

**ONLY £12.99**  
complete with handbook

# Code Comfort

*York Electronic Research is a small company specialising in hardware and software utilities which are worthy of more attention. The latest releases include a 6502 assembler and a Z80 compiler for the C64.*

*By Eric Doyle*

**T**he 6502 Assembler from York Electronic Research (YER) is a no frills two-pass assembler which eases the problems of coding considerably by allowing labels to be used. This means that subroutines can be called by giving them a name of your choosing and variables used within the routine can also be named. It's easier to explain this by example.

Let's use a short routine for clearing four lines of the C64 screen in conventional mnemonic form:

```
C000 LDY # $28
C002 LDA # $20
C004 STA $03FF,Y
C007 STA $0427,Y
C00A STA $44F,Y
C00D STA $0477,Y
C010 DEY
C011 BNE $C004
C013 RTS
```

In YER assembly code this becomes:

```
0001 ORG 49152; decimal for $C000
0002 SPACE=32
0003 SCREEN=1024
0004 WIDTH=40
0005 ;ROUTINE STARTS HERE
```

```
0006 LDY # WIDTH
0007 LDA # SPACE
0008 CLEAR: STA SCREEN-1,Y
0009 STA SCREEN+39,Y
0010 STA SCREEN=79,Y
0011 STA SCREEN+119,Y
0012 DEY
0013 BNE CLEAR
0014 RTS
```

As you can see the purpose of the routine is much clearer and the facility to include REM style statements following a semi-colon adds to the clarity. The main advantage is that jump and branch calls rely on a label, not a finite memory location. This means that adding a line within the program automatically adjusts the calls accordingly on assembly of the final code. Relocation is also easier. By simply changing the ORG address, the assembler will then use this as the base address for all jumps and branches.

Although I've said that YER's assembler is lacking in frills this has the advantage of leaving 39K of memory free for program workspace. Add to this the fact that programmes can be chained onto one another and you soon see the power that this utility conceals.

There are only fourteen editor commands:

- A - assemble current source text
- R - return to Basic
- C - verify a saved file
- D - delete lines
- E - edit a line
- G - get a file from tape/disk
- H - hunt text for a string
- I - insert new lines in text
- L - list a line, set L
- N - clear memory (new)
- O - recover text (old)
- P - save text to tape/disk
- S - define output device
- V - list text to screen

Some kind of DOS to call up disk directories and scratch unwanted files would have been a sensible addition, but this would be at the cost of assembler program space. At least you can always switch back and forth from program control to Basic without disturbing your assembler code.

Within the actual assembler listing the normal mnemonic codes work as expected but there are ten directives to assist program writing:

```
LOF
LON
CHN
BEG
```

```

1000 ;*** HIRES PLOTTING ROUTINE ***
1010 *** X=BC Y=DE ***
1020 ;
1030 *=$0924
1040 :HSCR=8192
1050 ;
1060 ;*** SWITCH ON HIRES AT 8192 ***
1070 ;*** THEN CLEAR HIRES SCREEN ***
1080 ;*** AND SET NORMAL SCREEN UP***
1090 ;
1100 LD A,%00000001 ;BLACK ON WHITE
1110 LD (1024),A
1120 LD HL,1024
1130 LD DE,1025
1140 LD BC,1000
1150 LDIR
1160 ;
1170 LD A,1 ;BORDER WHITE
1180 LD (53280),A
1190 ;
1200 LD A,(53272) ;HIRES SCREEN=8192
1210 OR 8
1220 LD (53272),A
1230 ;
1240 LD A,(53265) ;HIRES ON

```

DBY  
DWO  
SPC  
POK  
ORG  
AUT

At assembler code generation time LOF and LON simply suppress or enable the listing of the assembled code to go to the monitor screen. As printing to the screen takes time, a significant increase in assembly time can be gained by suppressing the screen display of the code when the assembly option (A) is employed.

CHN and BEG always appear at the end of programmes when several

listings are chained together. CHN tells the assembler to load the next part of the chain during assembly, and BEG is used at the end of the final part of the chain so that the second pass can be initiated from the first part program of the assembled chain.

The reason the chain has to be loaded twice is that the first pass sorts out the labels and their related actual address in the assembled code. The second pass is to insert these finite addresses into the code as it assembles.

DBY and DWO are used when look up tables are inserted into a listing. DBY stands for Define BYtes and anything following this command will be stored as a memory byte or

string of bytes. For example:  
DBY 147, "READY"

This would store the clear screen (147) value as the first byte followed by each value for the word READY in the following five memory locations.

DWO is followed by a series of label names used in the program. At assembly time the program stores the high and low bytes of the memory locations of the label as a look-up table.

SPC is followed by a number which allows a gap of up to 256 bytes to be placed within a program to leave space for variables and arrays.

At assembly time you have two options. The code can either be poked directly to its final address or stored as a basic booted relocater program.

The straightforward memory assembly is directed to the start address by the POK command. In our screen clearing routine POK 49152 would cause the assembler to try to poke the code directly into memory. In this case a clash with the storage area of the actual assembler program would cause an OUT OF MEMORY message to be generated forcing the use of the second assembly method.

ORG assembles the program in the low basic programming area preceded by a routine which will move the block of code to its actual execution address when RUN is entered. The AUT command can also be used to force the boot program to jump to the new code without having to enter a SYS command.

On the whole the assembler works well but correction of a bad line is a long-winded affair. If an error has been entered in line 0006 of the program, the correction routine would look like this:

L6 list correction line  
0006 LDM # WIDTH  
D1 delete that one line  
I insert a line  
0006 LDY # WIDTH

The instructions are good but the area of saving assembled code is not covered in sufficient detail. There is no way within the program to save the assembled code so a return to Basic must be made and a save can then be made using the normal SAVE command. None of this gets a mention which could confuse a beginner, and it took me a while to work it out for myself.

```

0208 ;
0209 NEWLIN:JSR CHROUT ;PRINT CR

```

Nevertheless the York Electronics Research Assembler is one that I would recommend for someone making their entry into machine code programming. All of the essential features are included within the program, and there are not enough commands to confuse a novice.

## The Z80 Emulator

The second of YER's products is the Z80 Emulator. Before going any further I would just like to say that this is purely an educational aid. There is little possibility of transporting the code directly across to a Spectrum or Amstrad machine. This is an *emulator* not a *simulator*.

For a long time after mastering 6502 machine code I wanted to try Z80 code, but I was inhibited by the fact that I'd have to buy another computer to do so. If only this emulator had been available then I would not have had to shell out a fortune on a machine I don't really need.

The YER emulator is really a compiler which takes each Z80

command and translates it into a corresponding piece of 6502 code from a library stored on disk. It's a bit like Basic really in the sense the interpreter takes the Basic keyword and executes a corresponding piece of code. The result is that the program runs more slowly than a dedicated machine code equivalent as is the case with this emulator. A compiled Z80 program runs at about a sixth of the speed of a dedicated 6502 routine. Not that this matters a great deal as long as it runs well enough to show if the Z80 coding would work.

The Z80 assembler is a lot more flexible than YER's 6502 equivalent and includes facilities such as search and replace, a simple delete command, hex/decimal/binary calculator and a complete DOS support.

The actual assembler listing follows almost the same conventions as laid down by the 6502 assembler except that the code follows the correct Z80 mnemonic system.

Any emulation of one CPU by another is liable to compromises in the interests of speed and efficiency. In

this case only the essential Z80 flags are supported: carry, zero and interrupt. With the exception of the IR pair, all of the CPU registers are supported, including the twin alternative set of registers. The net effect of these omissions is that some of the commands cannot be supported by the emulator. This is limited to 20 specific commands and doesn't cause any problems in learning Z80 code.

After writing your code in the assembler editor, you then save it to disk and load the compiler program. The compiler produces the object code which in turn is converted into the final 6502 version by the special saver program.

This is a novel and relatively cheap way of becoming familiar with the Z80 environment.

## It's easy to complain about advertisements. But which ones?

Every week millions of advertisements appear in print, on posters or in the cinema. Most of them comply with the rules contained in the British Code of Advertising Practice.

But some of them break the rules and warrant your complaints. If you're not sure about which ones they are, however, drop us a line and we'll send you an abridged copy of the Advertising Code. Then, if an advertisement bothers you, you'll be justified in bothering us.

**The Advertising Standards Authority.**  
If an advertisement is wrong, we're here to put it right.  
ASA Ltd, Dept 2 Brook House, Torrington Place, London WC1E 7HN

## ACTION PACK 3

The Action pack series are compilations of Alligata programmes that are sold exclusively through W.H. Smith. This, the third in the series, contains the Commando style shoot 'em up, Who Dares Wins II, an odd arcade game called Kettle, the terrible Indoor Bowling and superb Trap.

In Who Dares Wins II you're a man with a mission, a machine gun and eight grenades. Your objective is to single handedly take enemy outposts and free any of your comrades that need your unique (blast everything) help.

Indoor Bowling is a ten-pin bowling style of game but it lacks four pins and any point. The six pins that are there to be bowled over defy most of the laws of physics when they move as when you get a strike they all fall over, in perfect formation as soon as you touch the first pin.

Kettle is a curious arcade adventure in which you must break free from a 30 level underground complex. To move from level to level you must find the tin opener that's hidden in giant pots. Unfortunately, these pots also emit a constant stream of energy draining bubbles that must be deflected by your shield of protective orbiting crizza which can also be used to wipe out aliens. A weird game but fun to play particularly if you like kettles.

The final game, Trap, is undoubtedly the best of the compilation and after a simple but ship expensive charge through an asteroid belt becomes a Zaxxon style game in which you must zap aliens, disable lasers, collect fuel, shoot spy eyes (if these escape they alert the dreaded polic craft) all to collect orbs to gain a better ship to survive a harder course.

The skill of the game (apart from surviving) is to plan your attacks so that you take out the levels aliens first (there's only a set of quota of aliens per level) before blasting the boats and lasers to get through to the end of the zone where you have to proceed on foot, past walkways to claim your orb. A great shoot 'em up in the finest tradition.

Trap and Who Dares Wins II are the games worth considering in this compilation, and the others should be viewed as a bonus. If you've got neither then it's worth a look but if you've already got one of these think again.

T.H.

## GUN RUNNER

Vroooooom, daka daka, booom, oh sorry but I've just been playing the new game from Power House, Gun Runner and I'm hooked!

You play a highly trained helicopter pilot on a mission to rescue your trapped buddies. Their ground bases have been blown to bits and they are sitting ducks, out in the open as enemy planes and other deadly aircraft swamp the sky - you are their only hope. Fly into the invaded territory and shoot down all aircraft (well, as many as you can) but most importantly rescue your pals.

Your helicopter has been fitted with the latest hydrolic winch and with a flick of a button it will drop down to ground and level and pick up any running people (your

friends) leaving you to worry about the aircraft around you.

The background is very impressive and gives the true feeling of depth – yes the famous parralax scroll. The music is jolly (although there is none in the game) and spot effects are adequate. The end result is a highly playable, addictive well-presented game and at just under two pounds it's excellent value. Hats off to Power House.

K.R.

## DEMOLITION

**D**emolition is a breakout/arkanoid style of a game in which you must guide a ball with a bat around a series of screens to clear away walls of bricks.

These bricks occupy most of the screen except the left hand side where you can move your bat up and down. If a ball gets past your bat then you lose a life, but if you clear all the bricks you'll survive to play the next level. They'll be a different pattern of bricks to break through as well as a few indestructable bricks and special bricks that can have a

dramatic effect on the game.

Some bricks appear as numbers (1,2,3) which is the number of times you must hit it to destroy it and others give you bonus points and lives and some change the size and speed of your bat. One reverses your bat controls while another acts as glue that sticks the ball to your bat until you press the button and yet another builds a wall of single bricks behind the bat to save the ball if you miss it.

The result is a good variant of the tried and tested breakout formula that first appeared in the arcades over 12 years ago!

T.H.

## STARPAWS

**O**ut in the far reaches of space, in the farthest Galaxy, a huge money war is being pledged. Well, not exactly money but space birds known as griffins. You see as this bird was acclaimed a galactic delicacy, and acquired such value it came to be used as an extremely valuable unit of intergalactic currency, traded on the stock market of the universe.

On the moon of a far-away planet, a gang of unscrupulous mercenaries have been secretly breeding the tasty space griffin and plan to flood the market with them. This would of course throw the monetary systems up in the air, allowing them to seize over all power.

This can not be allowed to happen so starfleet command intend to send Neil Armstrong to wipe out this dirty trick and anyone caught breeding them. But due to an error on the communications computer the dodgy captain Rover Armstrong was sent instead. Of course, he was vastly inexperienced but the task is simple enough – just capture or destroy all the griffins on the planet. The griffins note his arrival and promptly make themselves scarce, (not so easy after all!). Captain Rover gets help from the scout ships that drop off various supplies to help catch the birds, such as speed. When you are nearing the griffin, press the button

and you will leap, hopefully right onto the griffin back, and then you eat him. Other goodies include the space explosives (my favourite) when you are right near the griffin they will slow down but won't let you get too close, just select this weapon, push the button and POW feathers fly (hee, hee!).

There are loads of different traps and such like and even when you've seen them all, this is a fabulous arcade game combined with a fair bit of strategy.

For just over a fiver this game represents very good value, nice sound (Robb Hubbard), amazing parallax background.

I don't need to tell you to buy, I bet you're putting on your coat now, go on then, get down to your local software shop.

cause him to walk into one of the hazards you have just avoided, then so much the better.

Although a nice idea, I found Road Runner totally lacking in playability on the cassette version. Each level, although short, has to be loaded in separately from tape. When you die, the tape has to be rewound as you start again. Even if you take the proffered short cut to the last level you reached in the previous game, you have to wait for all the intermediate levels to load in one by one. If Road Runner had to wait this long, he would have been barbecued long since.

If you can put up with the problems of using the tape, the game itself seems to be a competent version of the arcade version and fans will no doubt want to buy a copy. Otherwise, it's a case of try before you buy. That's all folks.

G.R.H.

## ROAD RUNNER

**B**eep. Beep. Stopping only for a quick peck of corn, Road Runner zooms off into the distance leaving only a cloud of dust behind while the hapless Wile E. Coyote is left to suffer the consequences of his latest, backfired plan. That at least is the theory.

Having started in a cartoon and progressed to an arcade game, Road Runner has finally arrived on the 64. You play the part of the scrawny looking bird and your objective is simple - to survive.

Each level presents a new series of obstacles apart from the ever-present Wile E. Falling boulders, speeding trucks, crevasses and mines must all be avoided and throughout you must keep eating piles of seed.

Wile E. Coyote makes frequent use of the Acme company as he buys their latest gizmos in an ever-more desperate attempt to catch up with you, so expect to see him whizzing past you at high speed on a jet-propelled skateboard, rocket, jetpack or even pogo stick. Should you

## ROCKFORDS RIOT

**A**t last, First Star, the makers of the famous Rockford character have released Bouldersash I and II at only £2.99 each.

I was pretty chuffed as I was never able to get hold of the first game which was very good. I wondered why they had waited so long to release it?

Anyway, for those of you who have not heard of these games, I'll tell you more. There was a little guy called Rockford and he liked nothing better than collect precious gems and valuable rocks.

One day, while out walking his dog he stumbled across a cave, and being of a curious nature he decided to investigate. He sent his dog home and went in and was amazed at what he saw - huge gems and jewels stuck in the ground, so not to miss the big chance he started to collect the gems, when he had them all he heard a strange noise and noticed that the entrance was gone and a new one had appeared. So in he

went, and there he discovered another cave containing more jewels. As he progressed deeper into the complex he started to encounter various nasties such as deadly butterflies that would explode and turn into jewels. 'Great', he thought, that was until he got caught up in the explosion, but strangely he felt alright after a while, he had just lost one of his three lives.

Other meanies he met included huge fireflies that would explode when hit by one of the many boulders, which caused a very powerful explosion but maybe he could use it to his advantage?

Soon Rockford meets up with the giant Amoeba, a huge green slime that slowly oozes its way through the cave destroying anything that gets in its way. Then Rockford has an idea, surround it with rock so it can't move. So he does this, and waits patiently, and after about two minutes he is standing nearby tapping his feet when POW the green slime goes bang and turns into jewels. 'Wow', he says, 'I must have suffocated it. Quite a good idea though.'

You should have the idea by now - Boulderdash and Rockfords Riot are just search-think-collect-dodge games and prove very taxing on the old grey matter. If you do not have any of these two games then go and get them. They are very good value and you should think yourself lucky that you did not buy them two years back when you would have paid just under a tenner. Good graphics, nice sound, decent gameplay and brilliant value, which is surely enough reason to add these to your collection. **K.R.**

#### Touchline:

**Title:** Boulderdash/Rockfords Riot. **Supplier:** Prism Leisure, Unit 1, Enfield, Middlesex EN1 1SJ. **Tel:** 01-804 8100. **Price:** £2.99 (each). **Originality:** 6/10. **Playability:** 9/10. **Graphics:** 7/10. **Value:** 9/10.

## HERO

**Y**ou are Roderick Hero, ace member of the Helicopter Emergency Rescue Operation team. All you know is that there is a miner trapped somewhere underground by a freak explosion and that you have a limited amount of time in which to rescue him.

A re-release of the old Activision game, which consists of

a number of cave systems, each one of increasing complexity. Rock falls block your way and must either be dynamited or shot through. Strange creatures appear in front of you and must be shot or dodged, such as, spiders, bats and green slimy arms that try to grab you as you pass. Accidentally hitting a light switch will plunge the caves into darkness so that you have to navigate by guesswork - very dangerous as contact with lava results in the immediate loss of one of your lives. All you have to do then is to make sure that you don't plunge your helicopter into the icy waters. The added time pressure does little to help either.

The game looks more than a little dated now (not surprisingly really) and is graphically crude. For all that, there is still an initial addiction but once you start remembering where all the hazards are, that also wears off soon. **G.R.H.**

#### Touchline:

**Title:** Hero. **Supplier:** Firebird Silver, Wellington House, Upper St Martins Lane, London WC2H 9DL. **Tel:** 01-631-5206. **Machine:** C64. **Price:** £1.99. **Originality:** 3/10. **Graphics:** 3/10. **Playability:** 4/10. **Value:** 4/10.

## TERRA NOVA

**I**f you need to flex your fire button finger then load in Terra Nova and get zapping. It's a no frills shoot 'em up in which you have four zones to clear. In Terra Nova 'clear' means blast everything to smithereens.

To complete the game (which is extremely unlikely) you must blast your way through each zone three times! The first trip is the relatively easy one as you can fly and blast away quite happily without worrying about fuel or ammo, but in the next two flights you must collect these by destroying the enemy dumps.

Your main hazards come in the form of alien crafts that buzz you and space mines that you can't shoot but which wreck you. The mines are fired by ground installations that must be destroyed to gain points and reduce the number of mines, leaving you to dogfight with the aliens.

The first zone is set in space and once you complete that, three times, you can tackle the battles of a ground base, an Earth like landscape and the high seas.

A fun shoot 'em up that you'll enjoy but don't expect too much.  
T.H.

**Touchline:**

**Title:** Terra Nova. **Supplier:** Anco, 35 West Hill, Dartford, Kent DA1 2EL. **Tel:** 0322 92513/8. **Machine:** C16/Plus/4. **Price:** £7.99. **Originality:** 6/10. **Playability:** 6/10. **Graphics:** 5/10. **Value:** 5/10.

**REALM**

**R**econstructing the entire solar system is the minor task facing you. The Planetary Orbiting Co-ordinator has developed a serious malfunction and planets are scattered everywhere. You must control an XR3 droid and manoeuvre it round the Inner Co-ordination Sanctum.

In other words, the game consists of a large maze and you must wander around it collecting objects and solving problems. As you progress, you must relocate the nine planets in their correct place around the sun.

Not all areas of the maze are immediately accessible to you. Walking past certain points causes doors to spring shut behind you, trapping you if you have not taken sufficient care over your route. Arrows point the way but their main use is that when you stand next to them, they cause doors to open elsewhere in the maze; causing a lot of backtracking. As your progress further, so there are items to be collected which are then used to remove further obstacles in your path.

The maze is constructed of brightly coloured blocks and designs – graphically simple but effective enough. Certain blocks are lethal to touch but it shouldn't be too difficult to work out which ones they are as skull and crossbones usually tend to conceal something nasty!

Lack of any sort of action is likely to limit the appeal of Realm to maze fans, but it's not a bad game for the price.

G.R.H.

**Touchline:**

**Title:** Realm. **Supplier:** Firebird Silver, Wellington House, Upper St. Martins Lane, London WC2H 9DL. **Tel:** 01-631 5206. **Machine:** C64. **Price:** £1.99. **Originality:** 5/10. **Graphics:** 5/10. **Playability:** 6/10. **Value:** 6/10.

**LAUREL AND HARDY**

**L**aurel and Hardy have had a tiff. Nothing unusual in that you may say, they had at least one in every film that they made. Still, satisfaction is demanded and can be settled in the only way slapstick comedians know how – a custard pie in the face.

So, Stan and Ollie set off round a strange town in search of the local flan emporium. On their way, they will find plenty of opportunities to collect objects and use them to hinder the other – ball bearings, oil and broken glass. Just the sort of things an unsuspecting person can trip up on. Other features include riding on a bike to speed up your movement, recruiting the dubious services of a small dog and the presence of the Keystone Kops.

The screen is divided into three sections. The top shows Ollie's current whereabouts. All movement is shown on an east-west axis regardless of which way you are actually heading. As this is rather confusing it is strongly recommended to get a map. Likewise, the bottom half of the map is used for Stan. You can play either character against the computer or a friend.

The central area shows a picture of each character together with a series of icons indicating what he is currently carrying. The colour of your face shows how thirsty you are. You have to stop off occasionally to take on board liquid refreshment – non-alcoholic of course.

I'm afraid that this is yet another example of a dreadful licensed game. Companies pay a lot of money to use a title like this and are obviously eager to get something onto the market to recoup their investment as quickly as possible. All this pressure can only squeeze one thing – the game, and it shows. In Laurel and Hardy, the action is spread over too great a distance which makes the gameplay extremely tedious in the extreme. Less than adequate game control and display don't help either. The result is a poor man's Spy versus Spy.

Perhaps if software houses took the time and money to employ the services of a games designer and graphic artist rather than expect the poor programmer to come up with ideas, graphics and music as well as code everything, licensed games might have a better reputation. With Laurel

and Hardy, as Ollie might have said, 'Here's another fine mess.'

G.R.H.

**Touchline:**

**Title:** Laurel and Hardy. **Supplier:** Advance Software, 17 Staple Tye, Harlow, Essex CM18 7LX. **Tel:** 0279 412441. **Machine:** C64. **Price:** £9.95. **Originality:** 5/10. **Graphics:** 5/10. **Gameplay:** 3/10. **Value:** 2/10.

## ZYNAPS

**Z**ynaps is the latest shoot 'em up from Hewson in which you must fly your Scorpion fighter through screen after screen of alien spacecraft, command ships, mother ships and planet installations that shower you in homing and seeker missiles.

Your Scorpion fighter is fitted with a standard missile launcher but also a fuel scoop that can absorb the energy capsules left after a wave of aliens or ground installation is destroyed. Collect enough of these and you could activate other weapon systems such as more speed, greater firepower, bombs and homing missiles.

At the end of each sequence you will have to fight your way past a mothership or a command vessel that can only be destroyed by several well-timed shots or by homing missiles.

As you blast aliens and avoid their missiles as well as the background structures (that are just as deadly) your ship will get stronger and stronger, but so will the opponents you'll face.

Although Zynaps will give your fire button finger a good work out it is a little more than a Nemesis variant. It's good, but we've come to expect more than this from Hewson.

T.H.

**Touchline:**

**Title:** Zynaps. **Supplier:** Hewson Consultants, 56B Milton Trading Estate, Milton, Abingdon, Oxon OX14 42X. **Tel:** 0235 832939. **Machine:** C64. **Price:** £8.99 (ca), £12.95 (d). **Originality:** 3/10. **Playability:** 7/10. **Graphics:** 6/10. **Value:** 7/10.

## ZOLYX

**D**o you remember an arcade game called Qix that was then converted for every machine possible in a bewildering array of names that all ended in the letter X? Now here comes Zolyx which is the same old annoyingly addictive game that I just can't stop playing.

The game is incredibly simple. All you have to do is paint 75% of a screen by moving your zolyx and boxing off sections which then turn blue.

Naturally, there's a catch in the shape of zolyx zapping balls that cost you a life if they either collide with you or a box that you're drawing with the white line that follows your movements in clear territory. Lose your lives and you lose the game.

If you manage to complete a screen then you're rewarded

with a bonus life and you're onto the next screen which has even more balls to avoid.

A simple but ridiculously addictive game.

T.H.

**Touchline:**

**Title:** Zolyx. **Supplier:** Firebird, Wellington House, Upper St Martins Lane, London WC2H 9DL. **Tel:** 01-631-5206. **Machine:** C64. **Price:** £1.99. **Originality:** 2/10. **Playability:** 7/10. **Graphics:** 4/10. **Value:** 7/10.

## TABLE FOOTBALL

**H**ave you ever played those table football games where the pieces are controlled by turning handles? Well, now you can bring the excitement into your home and onto your computer screen at a budget price.

The game is only a two player game in which left and right joystick pushes move the selected bar (this is the one nearest the ball) and forward and back to kick.

The game is a best of nine goals match with the current score displayed on the pitch and not in the oceans of room above the table.

Budgie isn't the first software house to attempt to computerise table football, indeed Bubblebus produced a good version called Kick-off. This is not a good version for two annoying reasons.

Firstly all the players look as if they standing upright but aren't as the ball will pass under them unless you kick it. This is, of course nonsense and spoils the game as well as stopping the players trapping and controlling the ball and turns the game into a kicking match. Secondly, should you score a goal (these can sometimes be scored by kicking the ball past the post??) your opponent may get the goal or occasionally both of you get it!

Even if the program wasn't bugged, it just wouldn't be worth the money even at a budget price.

T.H.

**Touchline:**

**Title:** Table Football. **Supplier:** Budgie, 1 Orange Street, Sheffield, S1 4DW. **Tel:** 0742 755796. **Machine:** C64. **Price:** £1.99. **Originality:** 3/10. **Graphics:** 4/10. **Playability:** 6/10. **Value:** 4/10.

# The Personal Choice Collection

*A trio of packages for the home or small business user which includes a word processor, database and spreadsheet program that can be used separately or integrated through common files.*

*By Tony Hetherington*

**T**he collection is supplied in a library box set with each program accompanied by a quick reference guide. Also a full manual is provided complete with worked examples and tutorial sections that takes you through the basic operating instructions, and then onto advanced features and finally how to interface with the other programmes in the collection.

## Writer's Choice

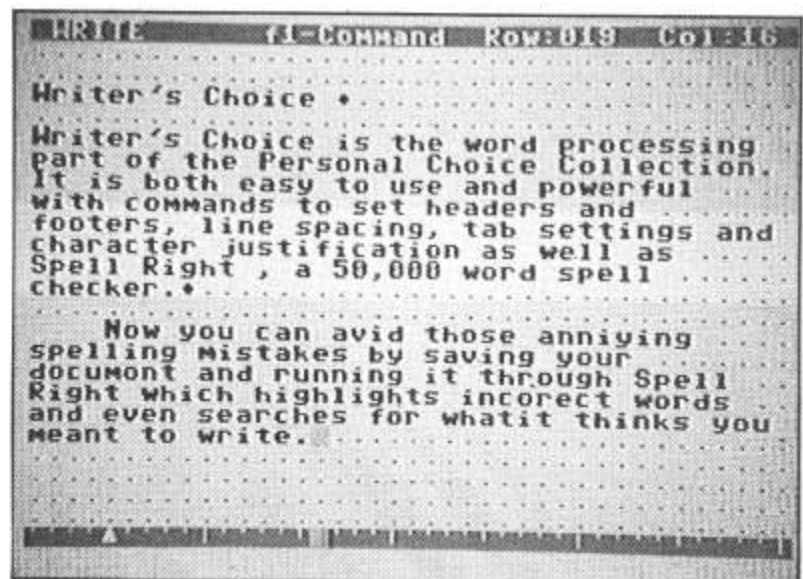

Writer's Choice is a full blooded word processor capable of handling complex documents with headers and footers, justification search and replace, formatting and a 50,000 word spell checker!

Once Writer's Choice has loaded, you are presented with a menu to write a document, format a page, LOAD, SAVE or PRINT a document or format a blank disk or produce a test print. You can then easily write a letter, memo or magazine article and correct typing mistakes, copy, move or delete blocks of text by pressing a few keys.

A Writer's Choice document can consist of 600, 40 character lines that appear on the screen as dots until they are over-typed. That should be enough for most applications but if it isn't you can chain documents together to form massive documents that can be printed out on almost every combination of printers and interfaces.

You can also read in files created by Filer's Choice and Planner's Choice and incorporate them into reports or use the Filer's Choice data to form a mailing list.

Writer's Choice is probably one of the easiest word processors I have ever used (there's always a help key in reach if you get stuck) yet it possesses some complex

functions and commands. For example, the search and replace command 'the' will find 'the' and 'The' but the command '/the' is even more powerful as it finds part words such as 'there' and 'whether'.

Once you've created your letter, memo or article you can preview to see what it will look like on paper and then check it with the impressive Spell-Right and get a word and character count.

Spell-Right is supplied on a separate disk so you must save your document and then load it in for checking. The Spell-Right disk is double-sided and both must be used in turn to check words that begin with letters between A and N and O and Z. This takes a while particularly if you've added your own dictionary to the 50,000 words that are already checked.

Once the program has finished it highlights any words it can't find. These can be altered, ignored or added to another dictionary. If you don't know how to spell a word you can have another go, and have that checked or you can even get Spell-Right to list all the similar words it can find for you to choose between!

### Filer's Choice

Every integrated package needs a database program to store and organise information so that it can be updated, sorted into order and then printed out by the word processor.

A Filer's Choice database consists of records that are created by typing on a screen and can be between 20 and 80 lines long. To create a database you simply have to type on the screen the records you want to keep and then save them to disk. You can then add new entries, delete records or edit existing ones, sort the whole file into alphabetical order (to whatever is defined at field 1) and search for a specific record or group of records by setting greater than and less than parameters.

Once you have the information stored in a format that's easily edited and updated you'll want to do something with it such as create mailing lists and print out labels and other reports or lists. Creating a report is easy as the program presents you with a list of the fields in each record in your file and all you have to do is put them in the order you want them on your form. You don't have to include all of them (indeed a useful printout is a list of phone numbers) and you can signal the computer to print more than one on the same line. This report or print out can then be displayed on the screen, saved to disk to be used with Writer's Choice or printed out directly.

### Planner's Choice

Planner's Choice is the third and final part of this application program package and features a fully fledged spreadsheet program for planning your finances and asking those 'what if' questions. What if VAT goes up, what if the cost of disks doubles, what if I sell 20% more games, what will happen to the price Mega Game 3? The answers and many more can be posed and answered by a spreadsheet.

CELL AC,15 28563 BYTES RECALC OFF			
VALUE OR FORMULA			
(AC,7 - AC,13 )			
	AB	AC	
1	JACHE SALES 1987	January	February
2	Units Sold	234.00	287.00
3	Price	12.46	12.40
4	Total	2915.64	3558.80
5	Tax at (40%)	1166.26	1423.52
6	Wages	900.00	900.00
7	Deductions	2066.26	2323.52
8	Profit/Loss	849.38	1235.28

The uses and applications of a word processor and a database are obvious but who would use or need a spreadsheet? The answer is that you don't need a multi-million pound budget to gain from using a spreadsheet. Club treasurer's, comparing investments or home and tax accounts are all made easier by using a spreadsheet and even if you're planning to run your own business, a spreadsheet printout will impress the bank manager.

Unfortunately, the spreadsheet screen looks daunting with only a few lines that outline the cells of the programmes work space. By using the Planner's Choice manual you'll learn that each of these cells can contain text (a heading so that you understand what's going on), figures and formulas to add up the contents of other cells or perform calculations. With these you can add up the subscriptions you've received, deduct the heating and lighting bills and rent of your club house and find out how much you've got left for trips or equipment and see whether this figure is increasing or decreasing, in which case you'll have to increase your subs. Similarly, a businessman can calculate profits, expenses and wages to set prices to keep the taxman at bay and be ready for any crisis such as the Chancellor deciding to put up beer, petrol or VAT.

By changing a single figure you can create a whole different set of circumstances which the program can recalculate in seconds giving you the new results and a jump ahead of the opposition.

Once your spreadsheet is complete you can either save it to disk and incorporate it into a word processor document or print it out individually directly from Planner's Choice.

The Personal Choice Collection is a powerful trio of packages that will put your C64 to work. There is also C128 versions that load automatically from disk that basically extend the screen size from 40 to 80 characters. The collection is a little expensive at £69.95 but does contain all you need to write documents and check the spelling, store information and get your finances into shape. The packages are easy to use and are supported by some superb documentation.

### SWOOPER

Special report from xenon space station+++ yesterday at 10709 startime pariah epidemic broke out+++ vaccine newly developed on earth urgently required+++ epidemic probably due to attack by the Wegans+++ they blocked off our station, battle craft needed+++ hurry, as already many casualties+++ ends xenon+++  
Super fast scrolling arcade game, brilliant sound.  
Atari ST £19.95 Amiga £19.95

### DIABLO

This game is very simple really. You slide pieces of track in front of a moving ball, and as it passes over a section of track, the track disappears. You just have to keep the ball rolling until all the track is gone. Graphics are simple but effective, sound is nice and the mouse interface easy to use. It's also so maddeningly addictive that it could earn you a one way ticket to the funny farm.  
CBM 64 disc £9.95 Atari ST £19.95 Amiga £19.95

### HOLLYWOOD POKER

Hollywood poker is a high class strip poker with the help of digitised graphics. Play poker against beautiful girls, one of them a real miss Germany! When your partner loses money she has to take off her clothes. You can choose between four different girls. Try your luck.  
CBM/64 cassette £7.95 CBM 64 disc £12.95 Atari ST £14.95  
Amiga £19.95

# FOR SPEED, POWER AND EASE OF USE

## FREEZE MACHINE

Now with..  
"Single part  
save"  
Includes..  
"Freeze  
Frame MkV  
& Lazer II"

- **Freeze...**  
Totally unstoppable Freeze facility from the originators.
- **Fast Save...**  
Saves in as little as 15 seconds. Nothing else can match this.
- **Multiple Save...**  
Make as many saves as you want once frozen, in different styles if you wish.
- **Ultra Compact...**  
The most efficient compact? Our tests indicate this, as many as 5-6 games per disk.
- **Game Killer...**  
Incorporates an effective routine to disable collision detection.
- **Independant...**  
Even produces stand alone Lazer files that reload in as little as 10 seconds.
- **Ease of use...**  
Always a strong feature, now even more enhanced.
- **Multi-Load...**  
Standard cartridge handles many games of this type. With the utility disk even more!
- **Fast Format...**  
Formats your disks in about 12 seconds.
- **File Copier...**  
Built in fast copier handles files up to 248 blocks long and is really easy to use.
- **Two Fastloads...**  
A normal disk turbo at 5-7 times normal PLUS the astonishing Lazer at 20+ times normal...BUILT IN.
- **Selectaload...**  
Just use cursors to scroll to the program you want and press a function key.
- **Reset...**  
Built in, so you can enter pokes for more lives etc.
- **Tape Turbo...**  
For quick save/reload on tape.

### CHILLS THE REST!

From reviews of Freeze Frame Lazer

Don't take our word for it  
"...far outstrips  
the opposition on  
both price and  
performance ..."

Commodore Review

"...the most  
exciting and  
lightning fast I  
have ever used..."

Commodore Computing International

### Why Freeze Machine?

This is the latest and most effective backup cartridge from Evesham Micros, the originators. It's speed of operation is the staggering feature. Imagine being able to SAVE & reLOAD your favourite games in as little as 10 seconds and no more than 18. No other "device" can remotely match these figures...remember these facilities are built in. Buy the "Freeze Machine" and see it perform, if you don't agree that it is the most formidable cartridge available return it within your statutory 28 days for full refund, we are that confident.

ONLY  
**£28.95**

### UPGRADES

MkI, II, III, IIIB...£ 19.95  
MKIV.....£ 7.95  
Lazer.....£ 2.00

**FREEZE  
FRAME  
STRIKES  
BACK**

### Freeze Machine Utility Disk V3.0

Latest version of the disk that complements the use of the Freeze Machine. Includes well over 30 routines. Allows the complete transfer to disk of many programs that load extra parts as the game progresses (the ones the standard cartridge cannot handle). Includes many of the latest popular titles like Last Ninja & Gunship plus many "standards" like World Games & Supercycle. A very useful add-on to your Freeze Machine.

Upgrades: £2.00

ONLY **£7.95**

## QUICKDISC + Disc Disector V5.0 DOUBLER

Our highly popular fast load and save plus utility cartridge has received many favourable reviews.

- \* **FAST LOAD (5 to 7 times improvement)**
- \* **FAST SAVE (5 to 7 times improvement)**
- \* **FAST FILE COPY (up to 248 blocks)**
- \* **RESET BUTTON (unstoppable)**
- \* **CENTRONICS PRINTER DRIVER**
- \* **FAST FORMAT (20 seconds)**
- \* **FAST BACKUP (4 minutes)**
- \* **EASY DOS COMMANDS**
- \* **HELPS MENU**
- \* **USES NO MEMORY**
- \* **128 COMPATIBLE ('64 mode)**

ONLY  
**£19.95**

### 1541 Quiet Stops

Cure for ever the dreaded 1541 drive head "hammering"

- \* **Easy to fit**
- \* **Detailed instructions**
- \* **One kit does two drives**
- \* **Helps prevent misalignment**

Not suitable for "turn lever" type drives

ONLY  
**£4.95**

The fifth version of the country's leading disc backup utility program. This latest version includes many "PARAMETERS" to handle the latest highly protected discs. This includes the latest American and English software. Be warned if you want to back up software by Ocean, Gremlin, Hewson, Domark, and even U.S. Gold whose protection schemes are NOT always the same as the American versions, then you MUST have "D.D.". At press date, we are sure NO other advertised product will handle all these, be it American or German.

#### INCLUDES THE FOLLOWING

- \* **EVESHAM 3 MINUTE NIBBLER**
- \* **EVESHAM 8 MINUTE NIBBLER**
- \* **MANY PARAMETERS** (The vital code for the protection schemes)
- \* **DUAL DRIVE NIBBLER**
- \* **MENU MAKER** (with select facility)
- \* **DISC ORDERLY**
- \* **FAST FORMAT**
- \* **FAST FILE COPY**
- \* **UNSCRATCH**
- \* **DISC RESCUE**
- \* **DISCOM+**
- \* **ETC., ETC., ETC.**

Upgrade fee: £7.95  
Most routines CBM 128 & 1570/71 compatible  
Perfect operation with Excelsior+

ONLY  
**£24.95**

Many thousands of this popular product have been sold and sales continue to flourish. Why? We think because it is the best product of its type. Consisting of hardware and software it uses a unique method controlled by the software that allows you to produce perfect backups of your tape software.

It is very easy to use and very successful. Our tests have proved that Doublor can achieve 100% success

ONLY  
**£12.95**

### 1541 Physical Exam

Have you got...  
**Alignment problems**

If so, you need this package. Contains digital alignment disc and drive fault diagnosis software that allows you to check and correct head alignment

- \* **CHECKS RADIAL ALIGNMENT**
- \* **CHECKS SPEED**
- \* **CHECKS BELT AND CLAMPING**
- \* **THOROUGH INSTRUCTIONS**
- \* **INCLUDES QUIET STOPS**

ONLY  
**£39.95**

**Evesham  
Micros**

## THE EXCELERATOR+

### FEATURES

- Ultra compatible
- Very quiet
- External 8/9 switch
- Direct drive motor
- Handles disk turbos
- Doesn't overheat
- Compact size
- Super reliable
- Year guarantee
- Great value

### FOR COMMODORE COMPUTERS

Don't buy a 1541C when you can buy this compact, reliable & modern drive for less money!

**GUARANTEED**  
MORE compatible than 1541C

SEE RAVE REVIEWS  
IN ALL THE MAGS

One reviewer said, "the only thing I could find wrong with it was that the sticker was on crooked".

**ULTRA  
COMPATIBLE**

### TWO PURCHASE OPTIONS

1. SPECIAL INTRODUCTORY  
PRICE  
**£ 159.95**

2. COMBINATION OFFER:  
Excelsator+  
& latest Freeze Frame  
**£ 179.95**

## THE Star

### PRINTERS FOR BUSINESS

### NL-10

New LOW price  
includes 2 spare  
ribbons FREE!  
(value £ 13.90)

**£219.00**

This is the class printer in its price category. The perfect choice for Commodore owners because the interface is changeable. So buy with the 64/128 cartridge then if you change computer at a later date just buy a new cartridge!

In a group test with other popular printers in the price category such as Epson, Citizen & OKI What Micro described the NL-10 as "THE ROLL ROYCE OF THIS GROUP". Why settle for less? (Amiga users order with parallel cartridge, price includes cable).

- Auto single sheet feed
- Tractor & Friction feed
- "Front Panel" mode selection
- Interchangeable i/face cartridges
- Double & Quad height characters
- Low cost cut sheet feed
- Superb "NLQ"

### Selected Products

**DISK NOTCHER.** Double your disk capacity, allows you to easily & accurately cut a second write protect notch. £ 4.95

**POWER PACK.** Replacement power pack to suit 64/128. £ 24.95

**AZIMATE 3000.** Check and adjust CBM cassette head alignment. Easy to use. £ 6.95

**MOTHERBOARD.** 4 slot with either all upright or with one straight thro' for modem use, please state type when ordering. £ 28.00

**XETEC SUPERGRAPHIX.** The best centronics i/face for 64/128, 8K buffer downloadable fonts etc. very good. £ 69.95

**DATA RECORDER.** CBM compatible type. Same performance etc. as C2N/1531 but cheaper and with pause. £ 24.95

**1541C DISK DRIVE.** We will sell you one but why not buy an Excelsator, less money and many advantages. £ 189.95

We have a good stock of Commodore related equipment. If you don't see what you want please give us a call

**SPECIAL OFFER: PRICE NOW INCLUDES DOLPHIN COPY**

## DOLPHIN DOS

**THE EFFECT IS STAGGERING.**

The established standard parallel operating system for the 64/128 and 1541 disk drive. Now in use with most of the top software houses including Gremlin, Software Projects, Thalamus, CRL, Alligata, Superior etc. etc. as well as many of the top independent software programmers. The speed and efficiency is incredible, who would believe that the humble old 1541 could load 202 blocks in less than 5 secs. It is compatible with the majority of commercial software and can be switched out when necessary. One of the real pleasures of using this system is to use it with the likes of EasyScript & Superbase to speed up both the normal loading and the sequential files. It is important to point out that this is achieved using standard CBM disk format and not a special system, therefore you can still use your existing disks.

### INSTALLATION

Fitting involves fitting two sub assembly boards, one in the 64/128 and one in the 1541. Normally these just plug in but some 164s need a small amount of soldering.

**ONLY  
£69.95**

### EXTRAS AVAILABLE

- User port expansion card. £ 14.95
- Kernal for 128 in 128 mode. £ 9.95
- Second drive assembly. £ 44.95
- Dolphin Copy (selection of copiers includes very powerful nibbler, extra fast unprotected and selective). £ 7.95

### SOME OF THE FEATURES

- LOAD speed 25x normal (PRG)
- SAVE speed 12x normal (PRG)
- LOAD speed 12x normal (SEQ)
- SAVE speed 8x normal (SEQ)
- LOAD/SAVE 3x normal (REL)
- Easy & fast DOS commands
- Format 40 tracks (749 blocks)
- Monitor built in
- LOADs 202 blocks in 5 secs
- Enhanced screen editor
- Drives centronics printer
- Extra BASIC commands
- Compatible with standard DOS
- Can be switched out

### Disks & Boxes

**25 bulk packed DS/DD disks.** With sleeves, w/p tabs and labels. Good quality & fully guaranteed. £ 13.95

**25 disks + box.** Disks as above plus 50 capacity locking storage box. £ 22.95

**25 disks + box.** As previous offer but with 100 capacity locking box. A very popular offer. £ 24.95

**50 capacity box.** High quality lockable disk storage. Smoked perspex top. £ 10.95

**100 capacity box.** Larger capacity version of above. £ 13.95

# Arcade Action

*Producing your own scrolling messages and plotting on the screen.*

*By Tony Crowther*

**S**crolling messages have become commonplace within game programs. Such messages can range from game instructions to amiable slanders about friends and other programmers. Here's a routine that allows you to scroll a message up to 255 characters long across the top of the screen.

Drawing borders and lines, and doing it quickly, is very important in games writing. So, I've also presented a routine that enables you to plot small blocks extremely quickly at any point on the screen.

## Get It Scrolling

The routine presented here for scrolling messages is nothing to jump up and down and shout about. However it is a simple but effective way of producing your own scrolling messages.

As usual there are three programs associated with the message scroll routine. Firstly, we have the Basic loader, called 'MESSAGE LOADER'. This routine holds the necessary machine code within Basic DATA statements. These are then POKED into the correct area of memory when the program is RUN. The second listing, 'MESSAGE M/C', is an assembly version of the program so that those of you interested in machine code can see how the program works. The third routine, 'MESSAGE DEMO', is a simple demonstration that shows the program in operation.

## Using The Routine

The scrolling is extremely simple to use and should cause you no problems. It does require the IRQ DATABASE routine to be in memory before you RUN. For those of you who missed the IRQ DATABASE in the March 1987 issue of Your Commodore I have included it here. To use the routine you should follow this procedure:

- 1) POKE 839.0
- 2) Clear the screen.
- 3) Print the message on the screen (255 characters long).
- 4) Type SYS 50817, COLOUR, SPEED.
- 5) Clear the screen.
- 6) POKE 839, 1 to return the message on.

The values for COLOUR are the normal colour codes as described in your manual.

SPEED should be between 0 and 8, where 0 means stop and 8 is fastest. If you are still unclear as to what you should do read the example — it should make things clearer.

## Screen Plotting

The second routine presented here allows you to place a quarter-character sized block, 4 x 4 pixels, at any specified position on the screen in any colour.

At first glance this routine will appear to be of little use in arcade programming, however it will become invaluable when drawing borders or lines on the screen.

Once again three programs are presented. The first, 'PLOT LOADER', is the Basic loader for the PLOT routine. The second program, 'PLOT M/C', is the machine code version of the program. As usual a demonstration is included. 'PLOT DEMO', showing the program in use. The syntax for this routine is as follows:

SYS 50616, X, Y, COLOUR

where X is the range 0-79 and is the horizontal co-ordinate for the dot. Y is in the range 0-49 and is the vertical co-ordinate of the dot.

Colour is a standard colour code (0-15).

## Brought Forward

In the last gripping episode I set you a couple of tasks to perform with the routines that I had already published. I am sure that you all managed to carry out the specified tasks without too many problems. Just in case you didn't, I have included here my versions of the programs.

The first program 'DEMO EXTENSION', links together the two sprite routines and produced animated, moving sprites. The second routine, 'HELI DEMO' moves last month's sprite around the screen.

If you couldn't get your own sprites moving then following these programs through should make life easier.

**REMEMBER** before you RUN any of these programs you must have the relevant routines from my previous articles in memory or your computer will crash.

## COMMODORE PLUS-4/C16

### WISP — Amazing new product!

WISP offers you a refreshing new way to operate your PLUS 4. WISP stands for Windows Icons Silicon-disc Package. It is packed with many powerful features. Everything in your new operating environment is run through windows — just like on very expensive computers. Built-in window facilities include a) clock b) calculator c) silicon disc d) note pad e) directories f) fast load and save g) error trapping h) programming windows. Windows may be closed and neatly stored as icons. A smooth sprite is used to select the windows you wish to use from the pull down menus. With the silicon disc you can instantly save, load and directory — all in under half a second (much faster than even a disc drive). The fast load and save to cassette is about ten times normal speed! We have never before sold such a feature packed program to give you power to control your computer to its limits. The ultimate programming environment. Incredible value. Plus 4 only. Cassette £9.95. Disc £14.95.

### THE MIRROR — TAPE BACK UP

Superb tape to tape back up copier catering for the majority of PLUS-4/C16 games. Backs up both standard and FAST loading software. All major loading systems catered for. Very large menu of both general back up routines and popular games. Basic machine code and protected games all easily handled. NO extra hardware and NO second cassette unit are required. Easy to use with full instructions. Very popular utility — Excellent value — £7.95.

### THE WAND — TAPE TO DISC

Make full use of your disc drive by effortlessly converting your games/software to disc. Convenient and fast loading from disc. Handles all major loading systems with a very large menu of general back up routines and games. We have had many letters telling us how much people appreciate this utility. Don't be left out — buy one! Every disc user should have one. Excellent value — supplied on disc — £12.95.

### PHOTON LOAD — FAST LOAD AND SAVE

Have you ever wasted time waiting for your programs to load or save? This excellent program will make a real difference to your computer. PHOTON LOAD, the new cassette operating system loads in seconds and allows you to load and save your programs at about TEN times the speed of a normal load or save. Two additional Basic commands make this extremely easy to use. Why spend money on a disc drive when you can load and save this fast. Features such as striped screen loading and an audio warning when loading is complete assure you loading/saving is going to plan (unlike the Commodore system). A well designed cassette loading and saving system — once you have one you won't want to be without one. Great value — £7.95.

## SUPER SPRITE

This extremely clever utility allows you to use 8 sprites simultaneously over a low-resolution screen. With this program you can now imitate the sprites found on the Commodore 64. Each sprite is composed of 16 x 16 pixels for high definition. Sprites can be independently moved in any direction with VERY SMOOTH scrolling. Sprites may take on any colour and travel at any speed. Sprite priorities and collision detection are provided. Despite adding all these complex features to your computer it is very easy to use. We provide extra Basic commands to make it very easy to use sprites with your programs. On top of all this we provide you with FREE demo programs and a FREE sprite designer. What more do you need to bring real power to your games on your C16/PLUS 4. This entire package is a must for games programmers. Excellent value — Cassette £7.95. Disc £9.95.

## ELECTRIK PENCIL!!!

A truly excellent high resolution art program. Magnificent masterpieces can be quickly drawn using the powerful facilities provided by this package. The program is entirely written in high speed machine code and includes Variable pencil size. Variable drawing speed. Easy select cursor menu, pixel draw/plot, freehand, lines, circles, flood characters/letters plotted on high-res screen at any position. 125 colours all usable simultaneously, hard copy to printer, load and save of pictures to cassette or disc, joystick or keyboard operation. Many other facilities too numerous to mention. Complete with instructions. Bring some colour into your life with ELECTRIK PENCIL. Impressive results in no time at all. Amaze your friends! Cassette only £7.95. Disc only £9.95.

## MERLIN ASSEMBLER

100 o/c machine code assembler for the Plus-4/C16. Very fast assembly of source code. Easy entry editing of code via the full screen editor. Full error messages pinpointing the errors. Full load/save and printer facilities. Intelligent assembly. Variable names, labels, hex/decimal, text and data statements, remarks, post indexing of variables etc. Many other facilities too numerous to mention. Highly recommended — A truly superb assembler. Comes with instruction booklet and FREE booklet of machine code routines. READ THE EXCELLENT REVIEW IN YOUR COMMODORE — MARCH 1987. Cassette £8.95. Disc £13.95.

## SPECIAL OFFER!!!

This month if you buy two or more of the following programs you may knock a POUND off the price of EACH item! This offer applies to Merlin assembler, Electric pencil, Super Sprite and Photon Load.

## BLACK CAT — CASSETTE CONVERTER

Have you ever wanted to use your PLUS-4 Wordprocessor, Spreadsheet, Business graphics etc. with a cassette unit? This program allows you to save your files to cassette rather than disc (as forced to by Commodore). Quick, convenient, easy to use. Only £4.95.

## JOYSTICK ADAPTORS

Converts any joystick to Plus 4/C16 format. Simply plug in and go! Only £3.50.

## CASSETTE INTERFACES

If you have a Commodore 64 cassette unit which you would like to use with your C16/PLUS 4 then you need one of these. This adaptor lead is simple to use. Just plug in and go! A sound investment £5.95.

## Tape Head Alignment C16/Plus 4

The perfect cure for the majority of loading problems. Specification as for the Commodore 64 (see below). Only £6.95.

## COMMODORE 64

### EVER HAD A LOADING PROBLEM?

Then send off for WIZARD'S TAPE HEAD ALIGNMENT KIT 64. No one should be without one! The most common cause of loading failure is bad alignment of your tape heads. This kit allows you to set up the tape heads of your cassette unit for the best possible loading conditions. In many cases this will make a remarkable difference in loading reliability. Our kit comprises of:  
1) A precision recorded cassette containing a sophisticated test program.  
2) A special adjustment screwdriver.  
3) A direction indicator.  
4) A turning meter.  
5) A detailed instruction booklet with diagrams.  
6) A Loading Doctor — to help you diagnose any loading problems. All of this for only £6.95!!!

## RAPID dispatch of orders

U.K. p&p FREE and by FIRST CLASS post, Europeans please ADD 50p. Outside Europe ADD £1.50 for AIR MAIL. Overseas orders welcome. All payments must be in pounds sterling.

Cheques/POs to: WIZARD SOFTWARE (Dept K.K.) 20 Hadrian Drive, Redhills, Exeter EX4 1SR.

# WIZARD SOFTWARE (Dept. K.K.) 20 Hadrian Drive, Redhills, Exeter, Devon EX4 1SR.

# Cut Price Disks from Direct Disk Supplies

from only £10.99 for 25 disks delivered to your door.

**Cash 'n Carry prices on disks from Direct Disk Supplies**

## OFFER 1 Premium Universals One disk for all reasons!

The Premium Universal disk tested to DSDD 96tpi - suitable for all drives needing high quality media. (SSDD, DSDD 40/80 track)

25 disks	£ 14.99
50 disks	£ 27.99
100 disks	£ 49.99
200 disks	£ 96.99
250 disks	£119.99
500 disks	£229.99
1000 disks	£399.99

Packed in 25's, complete with envelopes, labels, WP tabs and hub-rings. Disks individually certified and tested (on both sides) to 96tpi means no problems and higher reliability. Lifetime Warranty.

**ALL PRICES INCLUDE VAT & DELIVERY TO YOUR DOOR! NO HIDDEN EXTRAS**

## OFFER 2 Rainbows

Sets of 5 colours in each pack. Universal coloured disks to code your files and programs. Without doubt the best value coloured disks on the market. (SSDD, DSDD 40/80 track)

25 disks	£ 18.99
50 disks	£ 35.99
100 disks	£ 69.99
200 disks	£129.99
250 disks	£149.99
500 disks	£279.99
1000 disks	£499.99

Packed in 25's, complete with envelopes, labels, WP tabs and hub-rings. Disks individually certified and tested (on both sides) to 96tpi means no problems and higher reliability. Lifetime Warranty.

## OFFER 3 Flippies

This is the disk for turning! Reversible disk tested both sides. 2 notches and 2 index holes. Ideal for BBC, APPLE, Commodore etc.

25 disks	£ 18.99
50 disks	£ 35.99
100 disks	£ 69.99
200 disks	£129.99
250 disks	£149.99
500 disks	£279.99
1000 disks	£499.99

Packed in 25's, complete with envelopes, labels, WP tabs and hub-rings. Disks individually certified and tested (on both sides) to 96tpi means no problems and higher reliability. Lifetime Warranty.

## OFFER 4 Hlgrade Doubles & PC Preformatted

	Hlgrade Doubles	PC Formatted
25 disks	£ 12.99	£ 18.99
50 disks	£ 23.99	£ 35.99
100 disks	£ 45.99	£ 69.99
200 disks	£ 89.99	£129.99
250 disks	£105.99	£149.99
500 disks	£199.99	£279.99
1000 disks	£359.99	£499.99

Premium quality, individually certified to DS 48tpi. Made for the PC, giving premium quality at budget prices.

Why not spoil yourself, and buy them formatted - a little extra saves a lot! There's never a disk formatted when you need it.

## OFFER 5 Bargain Box

Price per order qty. Approx price per disk ex-VAT (inclor only)

20 disks	£ 10.99	.48
40 disks	£ 19.99	.44
60 disks	£ 28.99	.42
80 disks	£ 36.99	.40
100 disks	£ 42.99	.38
200 disks	£ 82.99	.36
500 disks	£199.99	.35
1000 disks	£389.99	.34

Branded SCOTCH (made by 3M) SSDD 48tpi at prices below other people's plain label. Certified error free and tested by 3M; disks have hub-rings, tyvek envelopes and labels. Stocks are decreasing rapidly, these have been extremely popular.

# Pirates

*If it's excitement and danger on the high seas that you're after, look no further than the latest release from Microprose.*

**A**vast behind! No, it's not a reference to the size of the Editor but Pirates, the swashbuckling game of derring-do and blood and thunder (or, in my case, thud and blunder) from those masters of the simulation – Microprose.

It is the seventeenth century and like many of your compatriots, you decide to seek your fame and fortune on the high seas. Just how your career develops is up to you. Maybe you fancy becoming an outright pirate, plundering anything that you can get your hands on; regardless of its country or origin. Or perhaps you would rather serve King and Country (England, France, Holland or Spain) as a privateer; in which case you act as a sort of legalised pirate, providing you only plunder the enemy. Should you have delusions of grandeur, you can try and emulate the feats of some of history's greatest mariners – Francis Drake or Henry Morgan for example, although only the experienced should apply.

Your business in the West Indies has failed and you decide to sign up on a ship and seek alternative fortune. The skill level you choose determines how well your future crews will behave but also how big your share of the plunder will be. You also get the chance to specialise in one particular skill such as fencing, navigation, gunnery, wit and charm or medicine. Fencing is strongly recommended for beginners. Your first trip as a crew member goes well and the crew suggest getting rid of the old captain and elevating you. The dispute is settled in the time honoured way – a duel. You

win, and it's not too difficult, and you assume command of your first ship.

The real game starts off in a friendly port. Here you can pick up the latest gossip, sell your plunder, recruit new crew and visit the Governor. He will give you a quick run down on the main political news, i.e. who you are at war with and will invite you to go out and sink a few of the enemy's ships. The tavern is a source of more specific gossip, e.g. which towns have been hit by disease, where the latest silver deposits have been found and so on. These nuggets of information influence your strategy as you decide which areas to explore.

After gleaning all the information you can, you will want to sign up a crew and set sail as quickly as possible. Although you are provided with a map of the Spanish Main, you must still learn the principles of navigation. Each type of ship behaves differently in the wind and you will have to discover how to make the best speed when the winds are against you. Get it wrong and you may run out of supplies and end up with a mutinous crew.

Sooner or later, your lookout will report a sail on the horizon. All you know is whose waters you are in, so you will probably want to go in closer and investigate. Chances are that she will be Spanish (assuming of course that you are playing a Brit). She may also be a pirate ship, Dutch or French.

Eager for some action, you decide to close for battle. The two ships are displayed on the battle screen together with

their relative strengths. You have three basic choices in battle. You can try and sink the enemy, you can try and ram her with the intention of boarding her or you can run away. The battle develops into a cat and mouse struggle as each ship tries to make the best use of the changing winds, raising and lowering sails, getting square on, in order to fire a broadside or getting close enough to board. What ship you have is important here. A galleon may offer you a lot of protection but you will find that other lighter ships will be able to run rings round you.

Obviously, if you sink a ship, you don't get too much chance to do some plundering so the trick is to damage her so much that she surrenders when you sail close. Failing that, you will have to board her. A good captain always leads from the front and you must engage the enemy captain in a sword fight. How well you do reflects on the morale of the crew so it is important to hone your fencing skills.

You have a choice of three weapons – rapier, long sword and cutlass. The cutlass does most damage but you do have to be close to your opponent, whereas with the rapier, you can keep your man at long range but have to hit him an awful lot of times. Attacking moves include thrusting and slashing at high, mid and low levels. The slash does more damage if it connects but gives your opponent a lot more time to counter. If you win, the enemy captain goes down on his knees and surrenders his ship to you and of course, being a gentleman, you accept. Far be it from me to tell tales but the editor of this journal, cad that he is did insist on hitting the enemy when they were on their knees begging for mercy.

As well as plundering a capture ship, you have the choices of sinking her or taking her along with you. Obviously, the latter action is better as you can increase your effective hold capacity and later sell the ship but make sure that you have enough crew to man both vessels.

Ships are not your only target – you can attack towns as well. This involves sailing your ship close enough to the town's fort before the enemy blows you out of the water. Your men can then land and you get to fight the Governor.

Alternatively, you can attack a town by land. This involves a completely different set of tactics. You have two or three groups of men to control as they attempt to make best use of the available terrain as you lure the city's defenders into battle.

Naturally, you will want to capitalise on your newfound wealth, but remember that the crew want their share too. Sail into a friendly port, sell your goods and divide the

plunder. This will mark the end of a particular voyage and your crew will automatically disband. To keep your reputation high, it is important to have a lot of gold to give out so use this option sparingly.

Depending on your successes, you get promoted by the various governors. Elevation in rank and a few acres of land all help add to your wealth and make for a happy retirement. You also get the chance to chat up the Governors' daughters with a view to finding yourself a wife.

Other quests meander through the game. Your sister usually manages to get herself kidnapped and you have to find the man who did it and duel for maps leading to her whereabouts. There are also treasure maps to be bought and more ill-gotten gains to be found.

Not every cruise ends in success though. You may lose a battle and be imprisoned for as long as it takes for someone to decide that you are worth paying a ransom for. Lose a ship through carelessness and you will be stranded on some uncharted island until a friendly ship happens to pass by. Eventually, the passage of time and the old war wounds take their toll and you are forced to retire. At this point, your rating is worked out based on treasure, land and titles accumulated over the years.

The best thing about Pirates is that even though it is a game on a huge scale, it is very easy to get into – unlike certain other simulations. There is no need to be aware of all the political implications at the beginning of the game

although you will want to later on in order to maximise your profits. The game is simplicity itself to control and there are some nice graphics in the non-sailing scenarios. Documentation in the form of a ninety page book is excellent. My only reservation is that I am not sure how well the cassette version of the game will play as disk access is frequent.

Pirates is a superb simulation. It is difficult to think of anything else that could have been included. Deceptively simple, it is only when you play for an extended period that you begin to recognise the subtlety of the tactics involved.

G.R.H.

# Adventure Kit

*Want to write a gripping adventure? This series will provide a kit of machine code routines which will simplify the procedure and enable you to develop an individual style. We start off with the location/exit module.*

As many of you know, there are a number of packages around which are aimed at making adventure writing easier. The best known are Quill and Graphic Adventure Creator. With these, all you need to do is think up the plot and the rest is done for you. The main drawback with these products however, is that the adventures written with them tend to have a similar feel and you are constrained by the imposed limitations of each package.

In essence an adventure is a data base which is accessed during the game. The tedious part is the need for efficient and rapid access of the data held in it. This aspect will be tackled by this kit. This will leave you more time to work on the flow of the game and the addition of embellishments.

The kit comprises of six modules:

1. A location/exit module which allows the handling of the geography of the adventure.
2. A text module which handles messages, location descriptions, etc.
3. An object module which eases such actions as taking, dropping, eating, drinking objects, looking and inventory.
4. A parser allowing the input of commands and the checking of words against a vocabulary.
5. A window module allowing the manipulation of screen windows so that you can erase or scroll different text areas.
6. An interrupt module which will build in a real time element into the game.

Naturally you don't get something for nothing. The machine code will steal about 8K leaving you about 30K for BASIC. The routines will, however, give you instant access to 20K of memory for the game database.

Each module will be accompanied with an editor allowing you to set up the data base. However, I'll go through the setting up of an editor in sufficient detail to allow you to write your own.

## Location Exit module

All adventures need some way of giving you the power to move about. This is done by using locations. Each location may be considered to be a room or cell linked to its neighbours by routes. It is necessary to specify two sets of data:

- a) which exits each location has;
- b) where each location leads to.

This month I will deal with the first set of data and cover the second set at a later date.

Ten possible exits are available for any given location. These are the eight basic compass directions and up and down. These are described in two bytes for each location. The first byte has a bit allocated for each compass bearing.

North occupies bit 0, north-east occupies bit 1 and so on. This information is held in a table of 256 bytes residing between 37632 and 37887 (\$9300-\$93FF). Location 0 uses the first byte in the table (37632) and location 255 uses the last byte (37887). Up and down use the first two bits of

bytes stored in a table from 37888 to 38143 (\$9400-\$94FF). This works in the same way as the other table.

The destination data occupies rather more memory. Each location has ten bytes reserved for it. These hold the number of the location reached when moving in any of the ten possible directions. If no such route exists, the byte value will be zero by default (more on that later). The table starts at \$9500 (38144) and occupies as much memory as required by the number of locations used. If a full complement of 256 locations is used, the table will end at \$9F00 (40704). Location 0 uses the first ten bytes, location 1, the next ten and so on.

The code in this module uses these tables to provide four functions. This routine prints the exits in any given location on the screen. The syntax of the command is:

```
SYS 36864, LOCNO, PRINTTYPE, X, Y
```

LOCNO is the location number. PRINTTYPE specifies the form of the display. Type 0 prints the exits across the screen using commas to separate them.

Type 1 prints the exits in a column in a form suitable for use in a window. X is the horizontal position of the top left corner of the output. It is ignored by type 0 output.

Y is the vertical position of the output.

#### EXITCHK

This checks whether an exit exists. If there is not an exit, location 900 will contain a zero. If the exit does exist, it will contain 255. Its syntax is:

```
SYS 36867, LOCNO, DIRECTION
```

LOCNO is as before

DIRECTION specifies the direction you want to move:

- 0...North
- 1...North-east
- 2...East
- 3...South-east
- 4...South
- 5...South-west
- 6...West
- 7...North-west
- 8...Up
- 9...Down

An example of its use would be:

```
1000 SYS 36867, LN, DI
1010 IF PEEK(900)=0 THEN PRINT
"YOU CAN'T GO THAT WAY"
```

#### CHANGE

This allows you to create or remove an exit during the game. Its syntax is:

```
SYS 36870, LOCNO, DIRECTION, ACTION
```

LOCNO and DIRECTION are as before.

ACTION specifies what will happen. A value of 0 closes the exit and a value of 1 creates an exit. An example of its use is:

```
2000 SYS 36870, 3, 2, 1: PRINT "A
ROCKFALL SEALS THE
PASSAGE TEST"
```

#### CHKDEST

This command checks the destination reached if you were to move in a specified direction. The number of the destination is held in location 901. The syntax of the command is:

```
SYS 36873, LOCNO, DIRECTION
```

The routine does not check whether an exit exists, you must do that. The following code fragment assumes that your current location is in LO and attempts to MOVE you in direction DI:

```
100 SYS 36867, LN, DI
110 IF PEEK(900)=255 THEN
PRINT "YOU CAN'T GO THAT
WAY": RETURN
RETURN
120 SYS 36873, LO, DI: LO=PEEK
(901): RETURN
```

The code is provided as a normal BASIC loader but you will no doubt wish to save it as object code. For those of you with machine code monitors, save the block from \$9000 to \$92D2. The editor includes a small saving routine which can be used for the job. What you do is:

- 1) RUN the editor and select the SAVE option.
- 2) When prompted for the file name, break out of the editor with RUN STOP/RESTORE.
- 3) Give the command:

```
SYS 870 filename, 8, 2, 36864, 37586
```

if you are a disk user or

```
SYS 870 filename, 1, 2, 36864, 37586
```

for cassette.

The resulting code can be loaded directly by:

```
LOAD filename, 8, 1 or LOAD
filename, 1, 1
```

The editor is menu driven and therefore self-explanatory. A few points should, however, be made.

The initialise tables option fills the data tables with zero bytes. Since the destination table is of variable size, you must specify the highest location to be used. This value is used to decide how much memory must be saved later. The program does not save the number of locations. You must remember it since you will be prompted for its value when you use the LOAD option.

The display location option lists the destination and exit entries for the specified location. The set up option allows you to specify the exits and destinations. You should set up the exits first. The destination portion will then ask you to specify the destination for each available exit.

If you plan to create an exit during the game, use the editor to create the exit and the destination and then use the editor to close the exit. The destination entry will be retained for when you need it.

The thing to remember is that you should plan everything on paper before using the editor. Changing databases once you've started work may not always be possible. The final code fragment pulls three of the commands together in a simple routine for moving about.

```
10 DATA N, NE, E, SE, S, SW, W, NW,
W, U, D
20 FOR I=0 TO 9: READ DI$(I): NEXT
30 LO=1
40 PRINT CHR$(147):PRINT
"LOCATION" LO
50 SYS 36864, LO, 0, 0, 5
60 INPUT "WHICH WAY": DI$: I=0
70 IF DI$=DI$(I) THEN 100
80 I=I+1: IF I<10 THEN 70
90 GOTO 60
100 SYS 36867, LO, I: IF PEEK(900)=0
THEN PRINT "YOU CAN'T GO
THAT WAY": GOTO 60
100 SYS 36873, LO, I: LO=PEEK(901):
GOTO 40
```

That's all for now, next time I will look at text storage.

```

# I.Q.

*If you hate shooting aliens and feel that you need something more intellectual to stimulate your grey matter then look over this selection of games.*

## ULTIMA I

Anyone who has ever played the excellent Ultima III or even bigger and better Ultima IV will have wondered how it all started. Playing these games is like watching a film that's already halfway through but now you can find out how it all began in this re-released version of the prequel, Ultima I.

There was once a land called Sosaria that prospered under the rule of Lord British. Unfortunately, there was also an evil Wizard called Mondain who grew in power until he eventually invaded the land with an army of hideous

Inside towns and castles you can buy food and drink to keep you alive, a room to sleep off injury and exhaustion and shops to buy equipment and weapons to prolong your quest.

As in the subsequent Ultima games you move around, fight and cast spells by pressing single key commands that are detailed on a quick reference guide. This is supplied in the display game box with the disk, booklet of spells and monsters, colour maps of the realm and a small bag of coins.

Ultima I has been rewritten and speeded up for this relaunch and is a must for Ultima adventurers. You may find it a little easy after III and IV but it's still a challenging quest that will lead you to the stars (I'm not saying anymore, you'll have to find out the rest yourself). Coming soon Ultima II and then V!

T.H.

monsters that quickly crushed all resistance. Sosaria now desperately needs a hero to challenge the Wizard and free the land.

If you haven't already guessed you're the hero and you have to complete this quest on your own. As the game begins you can define your character by assigning an extra 30 points to the existing values (ten) that decide your strength, agility, stamina, charisma, wisdom and intelligence before choosing whether to be a human, elf, dwarf or bobbit and if you're a fighter, thief, wizard or cleric. Once you've decided who and what you are, you head for the great outdoors and a familiar Ultima wilderness screen littered with towns, castles and dungeons. Enter one of these and the screen will change to show the rooms of the building.

## ALTERNATIVE REALITY

Imagine all your worst nightmares joined together, and there is a fair chance that most of them will materialise in the Dungeon. Hidden somewhere beneath the City of Xebec's Demise you find yourself in the middle of a bitter conflict with evil proliferating around you. Can you survive long enough to discover how you can turn this discord to your advantage?

The Dungeon is the second scenario in Datasoft's Alternate Reality series. It follows on from the City but you do not need to own this game in order to play. The story is that you have been kidnapped by an alien spacecraft. You find yourself in a room with only one exit which leads into an alternate reality.

As you leave the room, a panel of quickly rotating numbers freeze and your character statistics are generated.

These are strength, intelligence, wisdom, stamina, charm, skill, wealth and hit points. A high figure for hit points – the amount of damage that your body can sustain is recommended. You will not have time to judge any of the other statistics. There are several other characteristics being monitored that you are not told about but must discover as you go. Moral alignment and weapon proficiency would seem to be included.

As you start out, you find yourself by a shop and should take the opportunity to equip your character as best as your few silver pieces will allow with weapons, provisions and clothes. You can haggle for better prices but don't make too low an offer or you will be thrown out on your ear. A club is a useful first weapon.

As you wander down the corridors and explore rooms, it will not be long before you encounter someone or something. What happens next depends on who surprised who. You can try to transact with the creature, attack it or run away. Each of these options leads into a further menu of choices. For example, if you choose transact, then you can offer something such as treasure, talk your way out of a fight, trick your opponent or just try to engage him in normal conversation.

The 'typical encounters' range include paupers, healers, thieves, mages, trolls and goblins (who are at war), the undead, dragons and devils. Remember that if you make a friend somewhere, the chances are that you have made an enemy somewhere else.

Doors lead off in all directions. Most open easily but some require brute strength, a key or the ability to break an enchantment before they yield. Just because you can't see them doesn't mean that they are not there. There are hundreds of secret doors and you will just have to keep walking into walls in order to find out where they are. Or you could use magic.

Magic comes in many guises. If you join a guild (if you can find one in the first place) you can learn the art of spell casting, for a hefty fee of course. Treasure gleaned from vanquished opponents often contains magical items. Potions, wands, tomes, scrolls, trump cards, magic eyes and horns all feature prominently.

Of course, not all treasure is good treasure. Quite a bit of it is cursed, and in which case you will need to repair your guild in order to have the curse removed. Other occupational hazards include catching diseases, being poisoned, getting hungry, thirsty or tired or suffering from extremes of temperature.

Although survival is your initial aim, as you progress, you find that there are various quests that you can undertake. A prisoner wants rescuing, a golden apple needs delivering and you need to find two halves of a ring, forge them together and then destroy the ring in the fires of the oracle.

The dungeon is displayed in 3-D with large illustrations representing special areas such as shops, guilds, the oracle and so on. In size, the Dungeon is a third bigger than the City. Spread over four levels, level one is on a 64x64 grid with successive levels each being a quarter of the size of the one above. This means that accurate mapping is essential. A starter map is included and it is suggested that you photocopy this. Certainly, you will make many mistakes. I found whole areas that I just could not match up and it was not a case of being only one square out either. Teleports, one way doors and mazes only add to your problems.

The game is immensely playable, although expect to kill off a few characters until you get your bearings. One of the complaints levelled against the city was that disk management was very poor and this is something that has now been sorted out. My one grumble is that the save routine is a little clumsy. After saving, it would be nice to be able to resume straight away rather than having to reload the character, but I can live with that.

The description above has only touched on a few of the features of the game. The Dungeon oozes atmosphere and as such, must be one of the best role-playing games on the market today. If the next five modules in the series are anywhere near as good, then fans of this type of game have a treat in store.

## CONFLICTS 1

There's a treat in store for wargame fans with the release of three of PSS's best known games on one compilation tape. The games are about as different in subject matter as it is possible to get – an air battle, an assault on an island and the defence of an entire continent.

Battle of Britain takes you back to 1940 as you try to pit the limited resources of the RAF against the might of the Hitler's Luftwaffe. The game can be played on three levels ranging from a training game to a fully blown thirty day campaign.

The display is a map of southern England and you are responsible for scrambling squadrons of Spitfires and Hurricanes to counteract the threats of the German fighters and bombers. Not every squadron is available to you as weather conditions play an important part of the game – airfields may be fogbound. The problem is to get a squadron into the air, put it on a course where you think it will intercept the enemy and then after it has attacked, direct it to

land so that it can refuel and rearm. That is simple enough for one squadron but becomes a nightmare when you have eighteen to control, all in real time. There is an optional arcade sequence in which you sit in a Spitfire cockpit trying to shoot marauding Messerschmidts.

Theatre Europe was the game that brought fame and notoriety to PSS. Set in the near future, it simulates an attack by the Eastern block against the combined forces of Nato. The controversy was caused by the fact that you have a nuclear strike capability, either limited or full scale. There were howls of protest from the anti-nuclear brigade and the people who thought that all wargames encouraged bellicosity and ought to be banned. As is usual in these cases, everyone missed the point entirely.

Whichever side you play, it soon becomes apparent that using the nuclear option is a losing one, in so much that both sides escalate everything it becomes goodbye world as we know it. That said, there is still enough in this game to keep you thinking. You must keep your troops supplied, use your airborne forces to their best advantage and decide whether to use chemical weapons. All this on top of fighting a ground battle on a massive scale. There are seven different air missions that you can fly ranging from reconnaissance to attacking enemy supply units.

Falklands 82 has five different levels of play. You must decide where on the island you are going to land your forces and then you only have a limited amount of time in which to clear the island of Argentinian forces. Wise use of your SAS and SBS forces for reconnoitring purposes should help you here.

Each unit has attack and defence factors, a movement allowance and attacking range. For example, a battery cannot move very far each turn but can attack from long range, whereas the Paras have to be next to their opponents before committing themselves to battle. After an attack, you may well, depending on conditions, be able to summon up an airstrike or request naval gunfire to help you. Time is limited, especially on the harder levels and the task of liberating all the settlements is no easy one, especially as you don't know the disposal of the enemy forces.

All three games are very well presented and easy to control, being by and large menu driven. Whereas they lack the complexity of some fully blown wargames, they more than make up for it by being very easy to get into and retaining a high degree of playability. As such, they are highly recommended to beginners and newcomers of this fascinating art.

**STATIONFALL**

**Y**our career still hasn't developed the way that you envisaged when you joined the Stellar Patrol some five years ago. You started off as Ensign seventh class, sweeping the decks of space ships. Then, by some quirk of fate, and more than a little skill on your part, you manage to save a planet. Promotion came fast. You are now a lieutenant first-class but still the excitement promised in the glossy brochures when you joined the patrol is nowhere to be found.

Look at your present assignment. Hop over to some remote space station and pick up a supply of Request for Stellar Patrol Issue Regulation Black Form Binders Request Forms. Hardly the stuff of which legends are made, is it? Your eyes light up a bit when you go to pick up your robot, as one of your three available choices is Floyd who assisted you so ably when you rescued Resida (as detailed in Planetfall). He is delighted to see you again and begs to be picked. How could you refuse such an offer?

Completing the paperwork as quickly as possible (in triplicate of course) you set the autopilot in your spacetruck and sit back until you arrive at the space station. You are a trifle surprised to find that there is no-one there to greet you. As you explore, you quickly discover that the entire station is deserted. Even Plato, another robot that Floyd makes friends with is surprised to see you but isn't too sure why.

Wandering around the station, the only clue that you find is in a tape of the Captain's log which has entries about the arrival of a strange alien spaceship which seemed to coincide with a progressive series of malfunctions in every piece of technical equipment. Your worst fears are confirmed when you are attacked by a homicidal hull repair droid.

As is usual with Infocom games, the story is lovingly crafted. It is impossible not to fall for Floyd, nuisance that he is as he creeps up noisily behind you to shout 'boo' lovingly in your ear. The descriptions of locations and objects are wonderful and no-one has mastered the art of guessing the players' 'incorrect inputs' and answering them back in a similar vein - quite like Infocom.

Their parser though, once the wonder of adventurers everywhere is beginning to look somewhat frayed round the edges, especially when compared to the likes of Magnetic Scrolls. For example, a phrase like 'get the tape and examine it', won't work as the parser assumes that you are trying to get something called an 'examine'.

I can't see any adventurer being disappointed, especially if they enjoyed Planetfall. The packaging, which includes a sew-on patch, a set of blue prints and your mission's instruction dockets, just helps to create the atmosphere of yet another excellent Infocom adventure.

VG

# Making Music

*The second installment of our music series continues coverage of the 64's sound chip, SID, and explains how to play tunes on your Commodore.*

*By Peter Gerrard*

**Y**ou will find in your Commodore 64 manual a list of high and low value frequencies for a number of notes. They're on page 161, if you've lost them! Here we are concerned with locations (V+0) and (V+1), which will contain the low and high order value frequency respectively.

Say we want to play the note C-3. A glance at the table reveals that the high value frequency is an 8, and the low value frequency is a 97. So, in order to play that note the final line of our program becomes:

```
30 POKE V+0,97:POKE V+1,8
```

Obviously, the V+0 could be abbreviated to just V if you wanted. To play any other note, just alter the low and high value frequencies in line 30 (values between 0 and 255). To alter the waveform, alter the number in line 25 (remembering to alter the pulse width as well if you select a pulse waveform), choosing between 17, 33, 65 and 129. To alter the ADSR settings, fiddle with the values in line 20 (values between 0 and 255), and to alter the volume just change the value in line 15 (values between 0 and 15 only, please, for now).

When you're satisfied with creating

a few simple noises or notes, we'll travel onwards and take a look at producing some harmonies, using all three voices.

## In Harmony

Producing notes with all three voices is not that much more difficult than producing notes with one. Having gone through the effort in the last section of setting up a simple note, let us now take a look at some simple ground rules when operating with all three voices.

## Volume

This, unfortunately, has to be the same for all three voices, and if the control register is set at 15 then all three will be pumping out their notes at maximum volume. However, by using different waveforms and playing notes from different octaves, one can create the effect of different volumes for the different voices. A low note played using a triangle waveform will sound much quieter than a high note played using a sawtooth waveform, for example.

## ADSR

These can be different for the three voices, and it is usually a good idea to make use of this fact when playing notes in harmony. Harmonic effects are probably heard to their best effect when notes are sustained for a reasonable length of time, rather as one would expect on an organ, and so in our program to follow we'll be doing precisely that. Attack and decay rates, however, are probably best left up to the requirements of the individual voices.

Remembering that musical notation refers to notes as C, D, E, F, G, A, B and then back to C again, one octave further up, of course!

To produce a simple chord of C then, we'll take the following high and low value frequencies:

Note	Low Value	High Value	Frequency
C	24	2	536
E	163	2	675
G	35	3	803

From that you can probably work out the relationship between frequency and high and low values. Multiply the high value by 256 (now *there's* an unfamiliar number!) and add the result to the low value. This gives us the frequency value. So why are frequency values easier to work with? Well, if we wanted to play our chord in a higher octave, say the next octave up the scale, we would multiply the frequencies by 2: this is the relationship between notes in different octaves. To go up another octave then, we'd multiply the frequency by 2 again. It's a lot easier multiplying one

number by 2 than it is multiplying two numbers and trying to extrapolate a result from that!

So, having got the values, let's take a look at our program, bearing in mind that we're going to be using all three voices, and that the control registers that look after each voice come in blocks of seven. That is, if we use our variable  $V=54272$ , we'll see that the waveform for voice one is controlled by register  $(V+4)$ , for voice two by  $(V+4+7)$  or  $V+11$ .

## Waveforms

Once more we can make use of the facilities available with the SID chip and use different waveforms for each of the voices. However, the white noise waveform is not going to be an awful lot of use if we're going to be attempting to produce intricate, pleasant sounding harmonies, so for the purpose of this exercise we'll stick to just triangle, sawtooth or pulse.

## Note Values

Fortunately all of these are worked out for you in the Commodore 64 manual, and as well as giving you the high value and low value frequencies for each note over some seven octaves, they also give you the value of the note in cycles per second. This is related to the frequency values in quite a simple fashion, but it can be of more use to us, especially when lengthy tunes or more

voice three by  $(V+4+7+7)$  or  $V+18$ . This enables us to set up a simple FOR ... NEXT loop to look after all three voices.

## The Program

As before, we'll flush out the entire SID chip contents first before we start by setting the variable  $V$  and turning the volume on.

```
5 FOR I=0 TO 24:POKE 54272+I,0:
NEXT
10 V=54272
15 POKE V+24,15
```

So far so good, and exactly the same as before. Now let's set the ADSR sequences up for the three voices.

```
20 POKE V+5,9:POKE V+6,240
21 POKE V+12,9:POKE V+13,240
22 POKE V+19,33:POKE V+20,36
```

There is no great significance to any of those values, other than that we have used quite a long sustain and release for each one. Now to set the waveforms.

```
25 FOR I=0 TO 2:POKE V+I*7+
0:NEXT I
26 POKE V+4,17:POKE V+11
33:POKE V+18,65
27 POKE V+16,0:POKE V+17,255
```

The only difference now is that we're using different waveforms for all three, and that voice three is using the pulse waveform. Finally, we need to play the actual notes, like this:

```
30 POKE V+0,24:POKE V+1,2
31 POKE V+7,163:POKE V+8,2
32 POKE V+14,35:POKE V+15,3
```

The result is hopefully a pleasant sounding chord.

From here it is but a simple matter to play different chords in different keys. All you'll need to do is to look up the high and low values frequencies in the manual, and remember that chords tend to go in jumps of two notes at a time. That is, something like C, E, G as we've played here, or D, F, A for a chord of D, or G, B, D for a chord in G, and so on. You are welcome, of course, to experiment with discordant

chords, if you can have such a thing, but remember that you might get on very well with your neighbours at the moment and that I won't be responsible for any untoward results.

Bearing in mind the techniques used here (and in particular the use of a FOR ... NEXT loop and the relationship between the three voices) it is but a simple step to go from notes and chords to proper tunes. There are many ways of extracting a tune from your Commodore 64, and in the next installment we'll take a look at some of the easiest methods.

### Playing Tunes

Using the material that we've covered so far, there is really only one thing further that you need to know in order to be able to play some tunes on your Commodore 64 — the notes we're going to play.

Later on we'll be using a modified synthesiser program to do all this for us, but for now we'll stick to some very simple things that most people will either know before typing in or recognise when played. Having got as far as using three voices we will continue to use them, and we may as well stick to the waveforms and ADSR envelope shapes that we've already set up. So, our program begins like this:

```
5 FOR I=0 TO 24:POKE 54272+I,0:
NEXT
10 V=54272
15 POKE V+24,15
20 POKE V+5,9:POKE V+6,240
21 POKE V+12,9:POKE V+13,240
22 POKE V+19,33:POKE V+20,36
25 FOR I=0 TO 2:POKE V+I*7+4,0
:NEXT I
26 POKE V+4,17:POKE V+11, 33:
POKE V+18,65
27POKE V+16,0:POKE V+17,255
```

So far so good and so far, familiar. We won't yet carry on to include the three lines from the last section that actually played a chord, we'll consider what notes we are going to play first of all.

A familiar enough tune to everybody must be the 'theme' used in Close Encounters of the Third Kind when the aliens and humans finally establish some sort of communication

and produce a welter of sound and lighting effects that would do justice to an Electric Light Orchestra concert. The five all-important notes are D, E, C from one octave, and from an octave further down we have C and G. The five notes are played in that order, and since they also have more or less the same duration, we can concentrate on the notes for now and worry about the duration afterwards.

It really is about time to forget about high value and low value frequencies, and to turn permanently to true frequency values, or the number of cycles per second for each particular note. For the five notes in our Close Encounters theme, the frequency values are as follows:

```
100 DATA 1204,1351, 1432, 536,
803
101 DATA -1
```

The -1 data element in line 101 will serve to tell the program that we've run out of data and are not going to be playing any more notes. If we add the following lines to our main program, we'll be able to produce a simple tune:

```
30 READ F:IF F=-1 THEN FOR
I=0 TO 24:POKE V+I,0:NEXT
I:END
31 FH=INT(F/256):FL=F-FH*256
32 FOR I=0 TO 2
33 POKE V+I*7,FL:POKE
V+I*7+1,FH
34 NEXT I
40 GOTO 25
```

This, as you will soon realise, does not produce a very sensible tune, and we do need to introduce some form of delay before going back to line 25 and getting the next note. a line something like line 35 would suffice for now:

```
35 FOR I=0 TO 1000:NEXT I
```

A one second delay occurs between notes. But wouldn't it be better if we were to let the program produce the delay for us, rather than just having a one second delay all the time? Here's just one way of doing that:

```
100 DATA
1204,50,1351,50,1432,50,536,50,
803,100
```

and amending line 35 to read:

```
35 READ DE:FOR I=1 TO
DE*20:NEXT I
```

This gives us much more control over the duration of each of the notes, but is still a long way from being really satisfactory. We can only achieve this through much trial and error, or removing the programming side of things altogether and letting the person running the program do the job. If we had our original line 100 back again which is :

```
100 DATA 1204,1351 1432, 536, 803
```

we could insert yet another new line 35 to read:

```
35 GET A$:IF A$ < > " " THEN
35
```

In which case we would wait for the person running the program to press the space bar before proceeding on to play the next note. However, this is still using alot of the 64's musical capabilities, and in order to make each voice play the note in a different key, we would have to make something like this:

```
31 FH=INT(F/256):FL=F-FH*256
32 FOR I=0 TO 2
33 POKE V+I*7,FL:POKE
V+I*7+1,FH
34 NEXT I
```

into:

```
31 FOR I=0 TO
2:F=F*2+1:FH=INT(F/256):FL=F-
FH*256
32 REMark is now redundant
33 POKE V+I*7,FL:POKE
V+I*7+1,FH
34 NEXT I
```

Each voice now plays its note in a successively higher octave, the new frequency value being determined by the statement  $F=F*2 \uparrow I$  in line 31, since this will give us the value  $F$  on the first pass through the loop when  $I$  is equal to zero,  $F*2$  when  $I$  is equal to one, and finally  $F*4$  when  $I$  is equal to two. Raising two to the power of  $I$  is a useful shortcut to producing the desired frequency.

But all this is concerned with producing simple notes, albeit in different octaves. How might we go about producing a three-part harmony, still using our Close Encounters data and no more? For this we have to try and understand the relationship between individual notes, since we do not want to spend the rest of our days working out vast numbers of different frequency values.

### Note to Note

We've already noticed that octaves are separated by a frequency value of two. That is,  $C$  in one octave has half the frequency of  $C$  in the next octave, a quarter that of  $C$  in the next octave again, and so on. Unfortunately for us there isn't a convenient number of notes from one  $C$  to the next, since there is only a gap of six notes between  $C$ s, or seven notes (including the  $C$  itself) in total.

A simple, but not entirely satisfactory solution, would be to divide the difference between two octaves into sevenths, and use these values for our chords of  $D$ ,  $E$ ,  $C$ ,  $C$  again and  $G$  for the Close Encounter theme. Alas (as you'll discover if you try it out) this does not work out exactly. Those little black notes have a habit of getting in the way.

Fortunately there is a mathematical expression for getting the frequency of the next note up the scale, provided you know the frequency of the proceeding note, and it works like this. Assume that  $F$  is the frequency of the note, not yet converted into high and low values to be POKEd into memory. Then, if we assign this to, say,  $C$ , then the frequency of the note  $D$  in the same octave is found by the expression:

$$FN=INT(F*2 \uparrow (1/6))$$

A mite complicated, but it does work! For example, the frequency of a particular  $C$  in a particular octave is

given as 1072 cycles per second. Applying this to our formula above gives us the new frequency of 1203. Not exactly the value given in the manual (which is 1204) but close enough, and those in the manual are never meant to be taken as gospel anyway.

So once more unto the breach, and instead of spreading our three voices over different octaves, we'll now get them playing in harmony by introducing the following changes to the program:

```
31 FOR I=0 TO 2:IF I=0 THEN
  FH=INT(F/256):FL=F-
  FH*256:GOTO33
32 F=INT(F*2 \ (2/(12/(I*2+1))))
33 POKE V+I*7,FL:POKE
  V+I*7+1,FH
34 NEXT I
```

Now doesn't that look wonderfully complicated? It's quite simple, really, don't panic! On the first pass through the loop nothing untoward happens, because we just want the original value of the frequency. Second time around, remembering that a chord of  $D$  will consist of the notes  $D$ ,  $F$ ,  $A$ , we want to be two notes higher up. In other words, replace the original  $(1/6)$  by  $(1/3)$ , which, believe it or not, is what all the rigmarole above does. On the final pass through the loop we want the frequency of the note that is four notes up from our original  $D$ , but since we cannot have  $(1/6)$  replaced by  $(1/1.5)$  we have to do everything in fractions of 12.

The main thing is that it works. Also a few of the variations on a theme that can be achieved by using just five data times. By playing in different octaves, or by producing chords, we begin to get some idea of the power behind the 64. But this isn't of course, the only method of playing tunes on the machine, and so for the rest of this particular section we'll be taking a look at one or two other examples of tune playing. After that, well, the light relief is over and we turn to theory in our attempts to get the most out of the SID chip.

### Tuning up

Here's the first of just two different methods of playing simple tunes on the 64 from data statements, without any guidance at all, because you should be

getting familiar with the registers and their locations and functions by now. Play with them, embellish them, because it is only by doing that that you'll really begin to understand the workings of SID.

```
10 V=54272
20 POKE V+24,15
30 POKE V+5,9
40 POKE V+6,0
50 POKE V+2,255
60 POKE V+3,20
70 POKE V+4,65
80 READ A,B,C
90 IF A<1 THEN 200
100 POKE V+1,B
110 POKE V,C
120 FOR I=1 TO A*50:NEXT I
130 FOR I=0 TO 23:POKE
  V+I,0:NEXT
140 GOTO 20
150 DATA
  5,22,227,5,22,227,5,25,177,10,21,154
152 DATA 2,22,227,7,25,177
154 DATA
  5,28,214,5,28,214,5,30,141,10,28,214
156 DATA 2,25,177,7,22,227
158 DATA
  5,25,177,5,22,227,5,21,154,10,22,
  227,0,0,0
200 FOR I=0 TO 24:POKE
  V+I,0:NEXT:END
```

One way of doing things: you may (I hope) spot the 'tune' being played, which makes me sound like Lionel Blair I suppose, but that's the only similarity between us, I assure you!

For our final example, here's a slightly different way of achieving the odd sound effect or two:

```
10 V=54272
20 POKE V+24,15
30 POKE V+5,9:POKE
  V+12,36:POKE V+19,255
40 POKE V+6,0:POKE
  V+13,36:POKE V+20,70
45 POKE V+3,A:POKE V+10,15
46 POKE V+2,20:POKE V+9,20
50 POKE V+4,65:POKE
  V+11,129:POKE V+18,129
60 FOR I=0 TO 40:POKE
  V+I,I:POKE V+7,4:POKE
  V+15,3:NEXT I
70 A=A+10:IF A>250 THEN A=0
80 FOR I=0 TO 23:POKE
  V+I,0:NEXT I
90 GOTO 30
95 FOR I=0 TO 24:POKE
  54272+I,0:NEXT
```

Press the RUN/STOP key to get out of this one, and then enter GOTO 95 to shut everything up.

There are many weird and wonderful sound effects that can be achieved by 'mucking' about with just the things that we've learnt about so far. Try altering the various parameters in this, and other programmes, to see what the effect might be.

When we start considering the more advanced techniques available to us on the 64, such as filtering, ring modulation, synchronisation, not only will we be able to start producing ever-more wonderful effects, but we will also be on the path to producing a true synthesiser, involving the simulation of different musical instruments, and much more besides. However, before we can talk about musical impersonation we need to know a great deal more about how various work, and in particular how different instruments produce the sound that they do.

Consequently, in the next section, we'll be looking in some detail at ADSR envelopes, and how changing them can produce a wide variety of different and unusual sounds and how, combined with a selection of different waveforms and one or two other parameters, we can really start to realise the potential of the 64 and its SID chip.

### Attack Decay Sustain Release

In order to enhance the quality of any musical performances that we might achieve by using the Commodore 64, a thorough understanding of the envelope shape of a voice, or the ADSR setting is essential. The simple definitions that we have already given for the phrases Attack, Decay, Sustain and Release will tell us what they mean, but will not explain precisely how they operate. Consider the following program:

```
10 V=54272
20 POKE V+24,15
30 POKE V+4,0:POKE V+4,33
40 POKE V+5,9:POKE V+6,0
50 POKE V+1,10:POKE V,10
```

This produces a note of a certain frequency playing using the sawtooth waveform, and having an Attack/Decay setting of nine combined with a Sustain/Release setting of zero. The note, as you will

hear, soon dies away to nothing. However, if we alter line 40 to read:

```
40 POKE V+5,33:POKE V+6,49
```

Now the note does not immediately die away, and indeed sounds rather different. A more substantial program should illustrate how the various settings of ADSR can be combined to produce some very different effects. Later on, we shall be looking at the workings of the two registers that control the entire envelope shape of the note (for voice one only, they work in exactly the same way for voices two and three).

```
10 V=54272
15 FOR I=0 TO 24:POKE
V+I,0:NEXT I
20 POKE V+24,15
25 A=1:D=1:S=1:R=1:W=1
30 PRINT"[CLR]"
35 PRINT"[HOME]Attack Decay
Sustain Release W/Form"
40PRINTTAB(4)ATAB(11)DTAB
(19)STAB(28)RTAB(37)W*16(+I
45 POKE 198,0
50 GETA$:IFA$=""THEN50
55IFA$="A"THENA=A+1:IFA=17
THENA=0
60IFA$="D"THEND=D+1:IFD=17
THEND=0
65IFA$="S"THENS=S+1:IFS=17
THENS=0
70IFA$="R"THENR=R+1:IFR=17
THENR=0
75IFA$="W"THENW=W*:IFW=16
THENW=1
80 POKE V+5,A*16+D:POKE
V+6,S*16+R
85 POKE V+4,0:POKE
V+4,W*16+1:POKE V+2,40:POKE
V+3,40
90 POKE V+1,20:POKE V+0,20
95 GOTO 35
```

A fairly straightforward program, but it illustrates the point. After setting up the variable V the program then displays the current settings of Attack, Decay, Sustain and Release on the screen before waiting for the user to press a key. Pressing the 'A' key increases the attack setting, D the decay setting, S the sustain setting and R the release setting. Finally, pressing W changes the waveform, should you choose to do so.

The ADSR settings are POKed into place in line 80, before line 85 takes care of the waveform (and sets a low pulse frequency and a high pulse frequency, if required), before the note itself is at last played by line 90.

You might care to add to the program, so that different pulse frequencies can be selected, or different notes played. The changes are not too difficult, and since we've taken the precaution of having our line numbers increase in steps of five there's plenty of room for additional statements to be inserted if required. These will probably be along the lines of IF A\$="something or other" THEN increase some variable. Not perhaps, the most elegant way of programming, but it will suffice for this simple example.

Now for a few words of explanation. You'll see that the waveforms are set to values of 1, 2, 4 or 8. By multiplying this by 16 and adding 1 we arrive at our more familiar values of 17, 33, 65 and 129.

You will note that the various ADSR settings never progress beyond 16. This is because the two control registers that look after these settings are obviously, dual purpose ones, and operate in this fashion.

```
A A A A D D D D
S S S S R R R R
128 064 032 016 008 004 002 001
008 004 002 001 008 004 002 001
```

In each case, the first four bits of each byte are used to control one setting, the second four looking after the other settings. To take the Attack/Decay register for now, since the Sustain/Release one works in exactly the same way, we will see that the maximum value of the Decay setting is actually 15, coming from the addition of (8+4+2+1). Sixteen possible settings then, force 0 through to 15.

It might appear that the value of the Attack can vary from 0 to (128+64+32+16) or 240, covering such values as 48, 160, etc., on the way. However, adding all those combinations up gives us, yes, fifteen different settings, or sixteen if you include zero option. How much easier it is to think of settings ranging from 0 to 15 again (rather than 0 to 240 and obscure points inbetween) and then multiply the end result by 16 to arrive at the higher value. If you check all the

possibilities through, you'll soon see that this much neater system works very well.

It is important to understand this principle, because we will be using it again when we come to some of the other multi-purpose (not just dual, either!) registers in the sections on ring modulation, synchronisation and filtering.

Just think in terms of bits and bytes and our earlier discussion about how a byte is made up on an 8-bit computer.

Having heard what the ADSR settings do, you might be wondering how to go about converting these settings into passable impersonations of musical instruments. Well, the Commodore 64 manual gives us some hints such as:

## Instrument Impersonation

Instrument	Waveform	Attack/Decay	Sustain/Release	Pulse Rate
Piano	Pulse	9	0	Hi+0, Lo+255
Harpichord	Sawtooth	9	0	-
Accordion	Triangle	102	0	-

Do these sound like the real thing, if you use the values in our little program given earlier? About as much as I sound like Frank Sinatra, which is not alot, believe me. No, there is a lot more to impersonating musical instruments than just fiddling about with ADSR settings, although they are obviously important.

As a starting point, though, they will have to suffice, and although we'll be taking a few more steps in the next couple of sections, try for now to think about the sound produced by the

instruments mentioned above. A piano, for instance, produces a very sharp note, which is sustained for a while, and then usually decays away quite slowly. How would you go about setting up the ADSR envelope for something like that?

Well, in all these cases it is alot easier to visualise something than it is to try and describe it, so the following program should be of some help when it comes to thinking up suitable ADSR settings.

VC

## PROGRAM: ADSR SETTINGS

# WIN A FREE FLIGHT ON CONCORDE

The creators of B24, a superb combat and flight simulator based on one of World War II's most famous aircraft are offering the once in a lifetime opportunity for you to win a free trip on Concorde, the world's most famous airliner.

By answering the simple questions below you could win a dream trip on the world's only supersonic passenger aircraft flying at speeds faster than the bullet from a gun.

## CONCORDE... THE FACTS

- Concorde first flew on 2 March, 1969.
- Concorde has carried over 800,000 passengers over 50 million miles.
- Concorde holds the record for the fastest passenger flight London to New York in 2 hours 56 minutes on 1 January, 1983.
- Concorde's maximum level speed is 1,367 mph.
- Concorde carries a maximum of 128 passengers.

If you are not a lucky winner in this great competition, don't worry because you can still experience the thrills of flight plus the exhilaration of combat in B24.

## B24

From the war torn skies of World War II emerged one legendary offensive weapon - the B24 bomber. This superb simulation allows you to recreate the exploits of this great aeroplane on single mission runs or a 19 mission campaign to destroy oil refineries in Poletsi, Rumania.

As pilot, you control the mission flight on a bombing raid from your home base in Italy; as group leader you command 40 B24's on bomb runs to 14 targets deciding on when and where to bomb depending upon weather, plan availability, group efficiency and target oil production levels. A flight and combat simulation of unparalleled quality.

Available on

CBM64/128

TAPE £14.99 DISK £19.99

U.S. Gold Ltd., Units 2/3 Holford Way, Holford, Birmingham B6 7AX. Tel: 021 356 3388.

## THE PRIZES

**1st Prize:** Two tickets for a flight on Concorde plus a copy of B24 and an SSI Order of Merit Plaque.

## 50 Runners Up Prizes:

A copy of the superb flight and combat simulator B24.

Please state a preference as to Tape or Disk.

## HOW TO ENTER

To win a supersonic flight on Concorde answer the following four questions and then in not more than fifteen words why you want to fly faster than the speed of sound. In the event of a tie, the most original reason will win the first prize.

Please send entries to:-  
U.S. Gold Ltd.,  
Units 2/3 Holford Way,  
Holford, Birmingham B6 7AX.

1. What is the speed of sound (mph)? .....
2. Name three World War II SSI titles. ....
3. What do the initials USAAF stand for? .....
4. What is Flak? .....
5. (In not more than fifteen words) I would like to fly faster than the speed of sound because .....

## RULES

1. This competition is open to all residents of the UK except employees of this magazine and their associate Companies, families and agencies. Employees of U.S. Gold Software, their agencies and families and friends.
2. The prizes stated will be awarded to the entrants who answer the questions correctly and give the most original answer to question 5.
3. Entries altered, illegible or not completed in accordance with the rules of entry requirements will be disqualified.
4. All entries must be on an official entry form.
5. All entries become the property of U.S. Gold Software Ltd., and cannot be returned.
6. It is a condition of entry that the competitor agree to be bound over by the rules.
7. Closing date for receipt of all entries is 31.10.87.
8. All entries to arrive at U.S. Gold Ltd., Units 2/3 Holford Way, Holford, Birmingham B6 7AX before the above date.
9. The winning entrants will obtain:  
1st Prize - A flight for two on Concorde, a copy of B24 and an SSI Order of Merit Plaque.  
Runner Up Prizes - 50 copies of B24.  
No alternative prizes are offered.
10. The judges' decision is final and no correspondence will be entered into.

Address ..... DISK ☐ TAPE ☐

# Link Up

*Here is the chance to link up a short-wave technical receiver and Commodore 64 to a Transceive interface and multimode receive program.*

*By Evelyn Mills*

**B**efore going into the feature details of this versatile system, it is helpful to know a few basic facts about the receiver. Firstly, what receiver is required? The market is open here, with models ranging in price from £24 to £600. Regrettably the lower priced models will not function with interfaces/software of this type as certain basic criteria are required.

Your short-wave receiver should cover the range 1.8 - 30 MHz and it must have a detector to receive SSB (single side band) plus a CW filter for picking up morse. To tune to an exact frequency, a receiver with digital display is much more accurate.

## Price Range

Having said all this, how much do you have to pay for such a model? Looking around a second-hand market would be informative as there is a constant supply and demand. Our household model is a YAESU FRG7000 which costs around £200, second-hand. (Remember, that short-wave listening is a hobby within itself which users get a great deal of information and pleasure from.)

An acceptable receiver will set you back a minimum of £150 second-hand and should have all the above features including the facilities to use a good aerial and earth; the receiver used here was worked on a long wire antenna (40 metres), suitably grounded to reduce background noise.

## Onto Computing

The interface, which is small and

compact, plugs into the user port of the C64, and is connected to the audio output on the short wave receiver (cables and connectors are supplied). It has a single switch which controls three functions; one position sets the computer for CW reception, another for RTTY reception and the third for filter on/off. According to the data you wish to receive, set the switch accordingly and load the disk RX-4 program.

While the program is not lengthy, it is extremely compact and efficient in use. All of the commands function via a single key press, a list of which is given in the literature supplied. On loading, a status line is displayed at the bottom of the screen. Press R and this indicates that you are in RTTY (teletype) mode; a C press takes you to morse reception, an A press to AMTOR reception and a T press to download SSTV (slow screen television scans). The AMTOR mode will not be discussed here as it is very similar to RTTY.

Our main options are T, R, and C. Inasmuch as morse transmissions were received and translated with considerable facility, let's get into the C option first.

To do this, set the interface switch to CW then tune into the amateur bands available for morse transmission, using the CW option on your receiver. These bands are listed in most short-wave handbooks and the more successful were found to be the 3.0 - 3.150 MHz and 14.0 - 14.350 MHz bands. The software controlling reception has a filter selection of 700

Hz, 1360 Hz plus a filter OFF mode; these are displayed at the bottom of the screen and are selected with single computer keys. There are also single key controls for setting word speed. For amateur morse, 20 w.p.m. or 40 w.p.m. should be used (depending on the speed of transmission). A speed setting capable of handling up to 250 w.p.m. is also available.

Let us assume that you have tuned into a good, clear morse transmission. At the top left-hand corner of your screen, nothing is visible until tuning is perfect, at which point a flashing yellow cursor will appear and the morse transmission will now be translated to text on your screen (in English or the appropriate language - such conversations are regarded as confidential and may not be printed here). You will find the transmitter's call-sign printed out, eventually enabling you to locate his/her geographical position (with reference to handbook).

It should be remembered that many people use morse in an abbreviated form or even in coded form: furthermore you are just as likely to catch the end of a conversation as the beginning. In fact, what you pick up is a matter of trial, error and chance!! The transmission may be 'locked' on autotrack if need be.

During reception, when one screen is full, it is overwritten by subsequent data which allows fast decoding. All material can be saved to disk by pressing S - a bleep will be heard which should be followed by a single number

or letter for program identification – the saving process then begins.

To output to the Commodore printer or MPS 801 press P either directly from the screen or from saved material. The latter is reloaded with a D press; when followed by O, data will again be visible on screen. Approximately 32K may be stored which is more than adequate for most transmissions. RESTORE will clear the screen but not the memory, so if you have a lot of rubbish coming through initially, due to excessive background noise or inaccurate tuning you will find that this is saved as well within any one program – generally as E's, I's and asterisks. Should you search around bands other than the amateur ones, you will find that information is transmitted in fast code.

### The Teletype Selection

Switch the interface to RTTY, filter ON mode and press R for software selection. At the bottom of the screen you will find the RTTY definition plus, at the lower right-hand corner, two

cursors for tuning purposes. When a station is located, a vertical black band will oscillate across the cursors to give very fine tuning – you are well on mark when the lines oscillate from left to right at a rapid rate. This will, naturally vary with the intensity of the signal.

Once you are tuned to a station (handbook useful) the teletype message is then printed to screen. Most of the material I picked up was either coded or in German or Swedish. Experience is needed here to know when and where to get the English transmissions (uncoded).

Pressing T will give a full screen picture if any SSTV (slow scan TV) is being transmitted.

### To be Recommended

This is a very dedicated hobby which requires a great deal of patience and computer time. Certainly the product marketed by Technical Software will not let you down. Technically everything functions very smoothly and the single key presses, allow for rapid switching from mode to mode.

Other key presses exist (F for figures, L for letters, etc.) which are described in detail in the literature supplied; helpful data is also given for the novice. The cost of the interface and software is modest with respect to quality, so if your interests lie in this direction, the product can certainly be recommended.

Technical Software also have a log book available (a mini-database with printer output) which is menu-driven, and a very good Morse Tutor: the latter allows characters to be taught in a simple manner; text may be typed at pre-selected speed, checked, errors highlighted and the result printed. A pitch adjuster is built into the system. The log book costs £8 on tape and the Morse Tutor £6 Add £2 to either for disk-based systems.

### Touchline:

**Product:** Transceive Interface TIFI and RX-4 Software.

**Supplier:** Technical Software, Fron, Upper Llandwrog, Caernarfon LL54 7RF. **Tel:** (0286) 881886. **Price:** Interface £25; Kit Form £15. Software £25 (ca); £27 (disk). VG

### "LOAD-IT"

#### ATTENTION DATA-RECORDER OWNERS

THE DISEASE – Tape Loading Problems  
THE CURE – Our Exclusive Data-recorder Modification Package

PERMANENT HEAD ALIGNMENT ADJUSTING KNOB  
CALIBRATED SCALE  
INTERNAL SPEAKER FITTED  
CBM RECORDER

- ★ Programs fail to load if the head does not read the tape correctly.
- ★ By simply adjusting the head slightly all programs will load!
- ★ Loading problems are caused by variations in alignment of data on tape.

#### "LOAD-IT" GIVES YOU:

- ★ Audible loading through internally fitted speaker.
- ★ Head alignment easily adjusted to clearest data signal.
- ★ Calibrated scale for keeping a record of loading positions.
- ★ Achieves 100% success even on poorly recorded programs.
- ★ Guaranteed for life of data-recorder.
- ★ Approved by data-recorder manufacturers.
- ★ Recommended by leading software houses.
- ★ Does not affect any guarantees on computer.
- ★ 3-day service from receipt of order.

- ★ Due to popular demand a D.I.Y. kit is available.
- ★ All you need is a soldering iron (required for CBM only).
- ★ A small file and common sense.
- ★ Easy to follow instructions are supplied.
- ★ CBM data-recorder kit, only £9.95 inc. post and package.
- ★ SPECTRUM 48K/128+2 D.I.Y. kit, only £7.75 inc. post and package (no speaker required).

**£19.95**  
includes  
return  
postage

**D.I.Y. KITS**  
from  
**£7.75**  
includes P.&P.

"LOAD-IT" is a registered trade name. Copyright ©1986. Patent Pending 8629660. Trade enquiries welcome. Franchise scheme available in selected areas. Britain and overseas.

SEND YOUR DATA-RECORDER SECURELY PACKED TO: Tel: 021-745 4970.  
"LOAD-IT", 35 Stretton Road, Shirley, Solihull, West Midlands B90 2RX.

- ☐ I enclose my CBM data-recorder and cheque for £19.95 inc.  
☐ D.I.Y. kit, CBM £9.95. ☐ D.I.Y. kit for any data-recorder £7.75.

✓ Tick as appropriate.

# Sprite Grabber

*Want to use sprites from other programmes in your own games? This utility makes it easy for you to find and save them for later use.*

**By J. MacDonald**

**S**prite Grabber is a useful utility for examining the sprites used in games. The sprites once found can be **SAVED** to disk or tape, **LOADED** back into some form of sprite editor and changed at will. In this way you can build up a library of your favourite sprites from your favourite programs.

## Getting it in

Sprite Grabber is a machine code program, presented here as two Basic Loaders. These should be typed in using the **SYNTAX CHECKER** program that can be found on the **LISTINGS** page.

Why two versions of the program? It's simply that they are both located at different addresses, in case one happens to sit in the same area of memory as the sprites you want to grab.

When the loaders have been **RUN** I suggest that you **SAVE** the machine code using a monitor or one of the following small Basic programs:

For the version at address 49152:

**10 POKE 43, 0: POKE 44, 192**

**20 POKE 45, 198: POKE 46, 35**

For the version at address 16384:

**10 POKE 43, 0: POKE 44, 64**

**20 POKE 45, 70: POKE 46, 64**

Then **SAVE** the programs with:

**SAVE "SPRITE GRABBER", X, 1**  
...where X is 1 if using tape or 8 if using disk.

The programs should be **LOADED** back to the address from where they were **SAVED** to avoid corrupting any sprite data that may sit in the Basic area. You do this with the following command:

**LOAD "SPRITE GRABBER", X, 1**  
...where X is as before.

## Using the program

**LOAD** in the game with the sprites that you wish to examine. Once **LOADED** and **RUN**ning reset the computer using a reset switch, or a cartridge with a reset on it. **LOAD** the **SPRITE GRABBER** program into memory at the address of your choice (49152 or 16384) and run the program with:

**SYS** start address

...where the start address is either 49152 or 16384 depending on the version of the program that you choose to use.

A menu will now appear on the screen showing what the function keys do, 'R' and 'S' options and sprite information at the bottom.

The function keys will allow the sprite pointer to be increased or decreased by one, sprite colours to be

changed, toggling between multicolour and hi-res mode and toggling the XY expansion of the sprite. **BANK** switching is achieved by pressing numeric keys 0-3 as shown on the screen. At all times the sprite pointer, **BANK** and sprite address is displayed on the screen.

If you find a series of sprites that you like, which might be an animation, like a man walking, use **F1** to display the first sprite in the series, and then press 'R' to save the start pointer. Now use **F1** to move the sprite pointer to the last sprite you want to save and press 'R' again to indicate the end of the series. Pressing 'S' will now activate the **SAVE** section of the program. This will prompt you for Tape or Disk — press the appropriate letter and you will be asked for a filename (16 characters max). Your series of sprites will now be **SAVED**.

If you try to **SAVE** from a high to a low address you will be notified of an error — press any key to try again.

Sprites can be **SAVED** from anywhere in memory, including under the ROMs. So remember, unless you are loading the sprites from a program which will redirect them to a new address, they will **LOAD** into the area they originally came from — with possibly unforeseen results.

PROGRAM: GRABBER 16384

## Commodore 64/PLUS 4 Products

### 6502 ASSEMBLER C64/PLUS 4\* tape/disk\* £12.99

A sophisticated two-pass symbolic assembler and text editor which supports tape and disk filing. The assembler, the editor and your source and object code may all be resident in memory simultaneously, facilitating rapid and interactive code development. Recently extended manual with many examples.

### Z80 EMULATOR/CROSS-ASSEMBLER C64 ONLY disk £12.99

A unique integrated Z80 development package. The emulator compiles Z80 source code into optimised 6502 which runs on the 64 at approx. one sixth the speed of a 2MHz Z80. It supports all but 20 of the 688 Z80 operations, calls to 6502 routines, and interrupts. The cross assembler generates hex or binary Z80 object files. The disk also contains a powerful editor and several example programs.

### BI-DIRECTIONAL RS232 INTERFACE WITH COMMS. SOFTWARE C64/PLUS 4\* tape/disk\* £29.99

The 64 KERNAL supports RS232 via the user port. This interface provides the necessary voltage conversion for direct connection to RS232 printers, modems and other devices. It is compatible with Easyscript and Superscript. The unit is supplied with 1 metre of cable (add 75p per extra metre\*) terminated in a 25-way male (or female\*) D-connector. The software includes a terminal emulator which supports split baud rates and auto-dial, file transfer utilities, a menu driven port initialisation program, and a transparent printer driver which vectors the KERNAL to redirect device 4 printer output to the RS232 port.

\*Please specify.

Prices are fully inclusive. Overseas orders add £2.50 Allow up to 1 week for delivery. Manuals available separately at £1.00 each.

# Hook-Ups

Continuing our series, we look at the possibilities of using the BBC as an intelligent disk drive interface between the C64 and itself.

*By Mycroft Appleby*

**L**ast month I explained the general principals of parallel communications, the terminology, and the method that I was going to use in the series. Also I included as an example, a simple memory transfer program for the C64 and BBC micro.

This month I'll look at a more practical application of the system. If there are two things that are different in the C64 and BBC Micro it is speed, and more specifically disk speed. The BBC Micro has one of the fastest and cheapest disk systems on any home micro. The Commodore 64 on the other hand doesn't have disk drives at all. Oh, they may look like disk drives. But in reality there are little hamsters inside that disk drive shaped box, that listen to the information coming down the serial bus and scratch it on the surface of the disk in shorthand.

This breed of hamster is very rare and was bred specifically by Commodore for the task. One of the stranger things about this breed (*Hamstradus Floppus*) is that they live on the paper envelopes that disks usually come in. If you don't believe me, count the number of disks that you've got, then count the number of envelopes - see! Further proof is evident when you swap disks in the middle of a 'read or write' operation. The miniature hamsters hammer on the roof of the box to get you to stop.

So with these two things in mind, it should be possible to use the BBC Micro as an intelligent disk drive interface between the C64 and the BBC Disk Drive, all you need is some clever software and the appropriate transmission protocol.

There is a small Basic program in the C64 and the main program on the BBC Micro. This is for two main reasons. Firstly you can load 1K of data into a BBC Micro and then port it onto a C64 a lot faster problems that

you get with Basic getting confused with machine code. The second reason is that this series isn't designed to give complete solutions to problems, but rather to supply the tools and the information to do the job. For this the code must be in Assembler format rather than strings of hex digits, so that you can see how it works. Most C64 assemblers are incompatible with each other and interfere with the system to such a degree that once the assembler has taken a chunk out of the memory map and written all over the pointers you haven't a clue where you are.

So the program is in the standard BBC format assembler. The C64 boot program is only slightly different from the one published last month, only locations and amounts have been changed. Some of the code on the BBC side may also be familiar, as I used many of the principals which were discussed last month.

## Starting Up

To load the software into both machines, first load "Boot" into the Commodore 64 and load "Disk" into the BBC Micro. Run "Boot" and then run "Disk". After about 35 seconds the code will have assembled into the BBC, been transferred to the C64 and then the BBC side will have been re-assembled and initialised for the BBC.

On the BBC screen at this point you will see a message indicating the buffer size and a number. This is the number of bytes in the buffer and indicates the maximum program size you can load or save plus 256 bytes for the header packet (which I've explained later). Do not exceed this. To increase the buffer size, most of the error checking has been removed.

On the C64 side you should have returned to the "Ready." prompt.

Typing 'SYS 49152' in the time honoured way will initialise the system.

At this point the vectors inside the machine that handle the loading and saving will have been slightly altered. Tape and disk (if appropriate) will work as normal, as will all other device addresses except '8'. This will transfer your program onto the BBC's currently selected drive in the blink of an eye. Likewise loading with a device number of '8' will load from the disk into memory as normal. Verifying is not possible however, due to the 'burst' transmission of the data (i.e. the data goes back and forth in one great chunk and it is difficult to compare it on a 'byte for byte' basis).

## Alterations

If you have a disk drive already attached and want to use it also, then you can change the device number of the BBC very simply. In the sections 'BLODE' and 'BSAV' in the C64 half of the program you will see that the memory location 'device' is compared to '&08'. This is the device number. Change this to whatever number you want above three (the system's choice, not mine) and you are there. A good choice (and one I use myself) is seven as not a great deal seems to use this device number.

## How it works

Remember how last month in the header packet of the transmitted data, as well as where to and how long, the packet also had a byte called 'cmd'. Well, this is the command byte. In this new system when the data comes flooding into the BBC, it looks at this byte and if it is a one it knows to save the data. The first 256 bytes of the data is special and holds various

information about the data, including the name it is to be saved under. This is extracted and the data is saved.

If the cmd number is two, then that is a load request. In this case only the 256 byte header packet is sent, complete with various information about the program, as well as its name again. The C64 then just sits there and waits. In this program it doesn't return to Basic, but you can have it so you get full Basic control right away and the program just appears in memory when it's ready. This system works well but needs a lot of care to operate it; '1loop' is the area to watch. Change the finishing off to operate in the IRQ loop and perform a manual relink and you are away - parallel processing at last.

However, back to the plot. When the BBC has found the program on disk, it prepares a packet with a cmd of three and sends it to the C64. The C64 knows that three means 'incoming program data' and treats it accordingly.

A cmd of zero will force a memory dump in any direction, just follow the instructions for last month. this is amusing for swapping screens and messages, or changing somebodies character set.

## Protocols

The transfer packet looks like this:

data lo \ Address where data is going  
data hi /  
len lo \ Length of data.  
len hi /

cmd Command Byte.

The program packet (first 256 bytes) looks like this:

Header +	Name	Function
0	sa	Secondary address
1	drive	Destination drive (unused)
2-18	name	Filename
19-20	start	Origin start address of program
21-22	end	Origin end address of program
23-255	free	Reserved for future expansion

## Next Time

I hope this system is of some use, I can't abide my hamster drives any more, the BBC drive is so much faster. Next installment I'll see what else I can dream up.

INFO MAT  
for  
**AMIGA**

BitStream

### FEATURES

- All AmigaDos 1.2 Commands in easy reference format.
- Understand what those dreaded "Gurus" mean.
- Ideal for use as a MOUSE MAT.
- Virtually indestructible high grade plastic.
- Size 11" by 14"
- Only £4.95 (inc p&p)★

(Available soon. MSDOS and Atari ST versions)

## COMMODORE 128 COMPANION

by Tim Arnot

- More about BASIC 7.0 than you knew existed
- Kernal, Editor & Basic jump tables revealed!
- Complete memory maps for 128 and 64 modes
- Detailed hardware descriptions
- Lies flat when open!
- 340 pages
- Only £9.95 (inc p&p) ★

ISBN 1 870381 00 9

Available from:

**BitStream Publishing (Dept. Y4)**

26-28 OSBORNE ROAD,  
SOUTHSEA, HANTS. PO5 3LT.

★ Add £1.00 for overseas orders.

## ABACUS SOFTWARE PRODUCTS from ADAMSOFT

### COBOL for the C-64 and C-128

Now learn this universal  
business language on  
your Commodore 64 or  
Commodore 128!

COBOL is the most widespread business programming language in use today. Now you can run this easy-to-use, English-like language on your C-64 with the easy-to-learn COBOL System package. The COBOL System features a syntax-checking editor, interpreter, compiler, and a number of symbolic debugging aids: a crunch function to reduce the memory size of your programs; a print on/print off feature, and much more. Includes sample programs to help you learn as you go, as well as a complete 150-page manual.

Both versions on 1 disk

£34.95

### PPM

Personal for C-64 or C-128

### Portfolio Manager

PPM is the most comprehensive portfolio management system available for the C-64 and C-128. Recommended for independent or professional investors, PPM lets you customize your reports according to your needs. PPM lets you manage stocks, bonds, mutual funds, treasury bills; record taxable or non-taxable dividends and interest income; reconcile each brokerage account cash balance with the Year-To-Date transaction file. The unique report generator produces any type of report needed to view or analyze a portfolio or security.

For C-64

£34.95

For C-128

£44.95

### TAS

Technical for C-64 or C-128

### Analysis System

Our Technical Analysis System Package is for the serious stock market investor. TAS analyzes and charts technical indicators to help the investor determine when to buy and sell securities. Our new enhanced version is up to 3-4 times faster than the original. Track high, low, close, volume, bid and ask by date. Place 300 periods of information for up to 10 different issues on a data diskette; formatting more data diskettes possible for larger portfolios. Build a variety of chart types on the split screen: 7 moving averages, 3 oscillators, 5 volume indicators, comparison charts for 2 different issues, trading bands, and least squares. The new C-128 version incorporates powerful new features such as macros, and quick-draw charts using up to four windows. Uses 1 or 2 disk drives. Hardcopy to most dot matrix printers.

For C-64

£34.95

For C-128

£44.95

**DEDUCT 10% if you purchase 2 or more Abacus Software products.**

All software products are on disk.

Free postage on U.K. and overseas orders. We stock the entire range of Abacus Software products and books. Send SAE for catalogue. Generous dealer terms available. Access (not Visa) or transcash orders accepted (a/c 687944007). Add £1.50 COD. Callers by appointment.

ADAMSOFT (Dept YC) 18 Norwich Avenue, Rochdale,  
Lancs OL11 5JZ. Tel: 0706-524304.

## TELETEXT

A world of  
information at  
your fingertips

A Microtext Adaptor turns your C64 or 128 into a sophisticated Teletext receiver giving you access to the very latest information at the touch of a button. Amongst its features are:-

- ★ 24 × 40 full colour text and graphics display.
- ★ Teletext pages may be saved to disc or cassette.
- ★ Print out page to any printer on the serial bus.
- ★ Teletext may be accessed and used by your own programs.
- ★ Easy to use single key functions for "Next page", "Reveal" etc.

The Teletext services from Ceefax or Oracle are free, there's the latest world news and software reviews, sports or financial results, there's recipes, whats on TV and much much more, hundreds of pages, constantly updated - A world of information at your fingertips. Supplied with a manual and a lead, the Microtext Adaptor fits neatly on the user port. The lead connects to the "VIDEO OUT" socket of a video recorder.

Just £69.95 inc. P&P (Overseas add £2.00).

'I wouldn't hesitate to recommend this to anyone'.  
— Your Commodore Jun 1987

### MICROTEXT TUNER NOW AVAILABLE

Our own Tuner has been specially designed to provide the signal that the Adaptor needs, thus eliminating the need for a video recorder. Just plug in the aerial, it tunes itself in (!) and channels are selected from the keyboard. The whole system consists of a Microtext Adaptor, Tuner, Power supply, lead and manual and costs just £114.80 inc P&P (128D owners add £8.50 for user port extension lead).

Only from:-

# Rebound

*A superb breakout style game for C16 and  
Plus/4 owners.*

*By K.M. Lawrence*

**I**t's funny how the old favourites like space invaders and breakout are still extremely popular with computer owners.

To play the game LOAD the program "REBOUND" and RUN it. This will automatically LOAD and RUN the machine code section of the program.

Use a joystick in port one to move your bat and hold down the fire button to make the bat move faster. But be careful - you have limited power to do this.

When you hit a brick it may turn into a 'mutant' and flash. From this state the brick may return to normal or it may change into a brick that will affect your bat in strange ways. The possibilities are: small bat, reverse controls or fast ball. The latter lasts until you hit the ball again while the others last for a certain length of time.

It is possible that when you hit a brick, a white dot may fall towards you. If you catch this you get the chance of using one of the various options that will appear on the right of the

screen. Pull the joystick down to choose the option that you want, but remember, the more dots that you collect the better the option that is given to you.

## Options Available

- Power - Extra power to go fast.
- Cure - Gets rid of small bat etc.
- Exit - Go to next level.
- XBALL- Up to three balls on screen,  
push up to release.
- XLIFE - Up to 255.
- Wall - Places a wall behind you so that  
balls will not be lost.

When the game starts the screens are set to random order. Press RETURN while on the title screen to play the screens in sequence.

## Getting it all in

Rebound consists of two programmes. The first, REBOUND, is in Basic and should be typed into your machine in the normal way and then SAVED to disk or cassette.

The second program, REBOUND M/C, needs to be entered through the computers in built monitor. To enter the monitor type MONITOR, type M 1000 to start entering the program. You will now be able to enter each line of the listing over the existing contents of the computer. You must press RETURN to enter each line of machine code. If you

have never used the MONITOR, read the relevant section in your computer's manual and be sure that you understand what you're doing before entering the program.

It is important to note that your typing must be very accurate. The slightest typing error will cause the program not to work.

When you have entered all of the REBOUND M/C program you should SAVE it to disk or tape by using the following command:

S "REBOUND M/C",01,1000,3400.

If using disk change the 01 to 08. Cassette users should SAVE REBOUND M/C after the program.

# Hide-It

*Keep prying eyes out of your programme with this handy utility.*

*By James R Strang*

**H**ide-It will allow you to protect any Basic programmes that you have produced. It alters a program so that when it is listed, only a single line will be shown and this will only contain a SYS number.

Of course, Hide-It isn't going to stop a determined hacker from breaking into your programmes. It will however deter the casual intruder from listing them.

All of the instructions are printed by the Basic loader program, so you should have no problems using the program.

The machine code version of the program is also reproduced here for

anyone who wishes to customize the code. The assembler used to produce the listing is Speedy Assembler which Your

Commodore is using as a standard for all of its machine code listings.

VC

## Getting it all in

You should have no problems entering the Basic loader. The SYNTAX CHECKER program found on the LISTINGS page of this magazine will help check your typing.

As mentioned, the machine code version of the program has been produced using Your Commodore's

own SPEEDY ASSEMBLER. You should be able to enter this into any assembler with very few changes.

N.B. You only need to type in the Basic loader to use the program. The machine code is reproduced here for those who want to see how the program works.

## MAIL ORDER ADVERTISING

### British Code of Advertising Practice

Advertisements in this publication are required to conform to the British Code of Advertising Practice. In respect of mail order advertisements where money is paid in advance, the code requires advertisers to fulfil orders within 28 days, unless a longer delivery period is stated. Where goods are returned undamaged within seven days, the purchaser's money must be refunded. Please retain proof of postage/despatch, as this may be needed.

### Mail Order Protection Scheme

If you order goods from Mail Order advertisements in this magazine and pay by post in advance of delivery, Argus Specialist Publications Ltd will consider you for compensation if the Advertiser should become insolvent or bankrupt, provided:

- (1) You have not received the goods or had your money returned; and
- (2) You write to the Publisher of this publication, summarising the situation not earlier than 28 days from the day you sent your order and not later than two months from that day.

Please do not wait until the last moment to inform us. When you write, we will tell you how to make your claim and what evidence of payment is required.

We guarantee to meet claims from readers made in accordance with the above procedure as soon as possible after the Advertiser has been declared bankrupt or insolvent (up to a limit of £2,000 per annum for any one Advertiser so affected and up to £6,000 per annum in respect of all insolvent Advertisers. Claims may be paid for higher amounts, or when the above procedure has not been complied with, at the discretion of this publication but we do not guarantee to do so in view of the need to set some limit to this commitment and to learn quickly of readers' difficulties).

This guarantee covers only advance payment sent in direct response to an advertisement in this magazine (not, for example, payment made in response to catalogues etc., received as a result of answering such advertisements). Classified advertisements are excluded.

### A powerful word processing system for the Commodore 128

Includes: On Screen status/help display  
45 Fonts ready to use • Font editor/creator included  
Foreign Language Disk

### Word Processing Features

- Over 65 powerful commands make text editing a breeze
- 45 + Fonts (includes Russian, Greek, Hebrew, Arabic)
- Room for 9 SUPERFONTS concurrently
- Text memory: approximately 64k Bytes
- Supports more than 100 printers
- 80 columns
- PRG file merge
- File names can be picked from disk directories
- 4 keyboard macros
- Headers/footers
- Page number in decimal or Roman
- On screen underlining/high-lighting of text blocks
- On screen status display, including pictures of fonts
- New fonts preview displays printer output on screen
- On screen bi-lingual editing
- Form letter/data merging
- Multi-color help screens
- Right-to-left editing features for foreign languages
- Loads in approximately 15 seconds with 1571 drive
- New formatters for inserting graphics into documents

### 72,000 WORD INTELLIGENT DICTIONARY COMING SOON

### Font & Character Set Creators

- 50 + two letter format controls (embedded in text files)
- Fractional character spacing used on word-wrap, justification, centering, and right alignment
- Proportional spacing (user-adjustable)
- Columnar printing (up to 4 columns)
- Overlaying of 2 or more characters for phonetic markings, diacritics, etc.
- 30 single-keystroke text modifiers (embedded in text files)
- Combine any or all of the following effects: underlining (adjustable) more than 20 pitches - more than 30 line spacing sizes - condensed text - boldface - inversion (white letters on black) - superscripts (adjustable) - 3 text heights (micro-normal-tall)

- Disk commands for maintenance of fonts or sets
- Grid for character creation/editing (manipulated with cursor keys, joystick, or light pen)
- Editing commands include: insert, flip, negate, shift, clear, copy
- Character can be printed while editing (font creator only)

Clip-art disk available with over 100 images £5.00

Sole U.K. franchisees: BYTES & PIECES, 37 Cecil Street, Lytham, Lancs, FY8 5NN  
Specialist software importers for the 128. S.A.E. for details of other products.

# POOLSWINNER II

THE ULTIMATE POOLS PREDICTION PROGRAM

- **MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available - 22000 matches over 10 years.
- **PREDICTS** Not just SCOREDRAWS, but ALWAYS, HOMES and NO SCORES.
- **SUCCESSFUL** SELEC guarantee that Poolswinner performs significantly better than chance.
- **ADAPTABLE** Probabilities are given on every fixture - choose as many selections as you need for your bet. The precise prediction formula can be set by the user - you can develop and test your own unique method.
- **SIMPLE DATA ENTRY** All team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).
- **LEAGUE AND NON-LEAGUE** All English and Scottish League teams are supported, and also the non-league sides often used on pools coupons.
- **PRINTER SUPPORT** Full hard copy printout of data if you have a printer.

Boxed, with detailed instruction booklet

**NOW AVAILABLE**

PRICE £15.00 (all inclusive)

**FIXGEN 87/8**

AT LAST: No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish League fixtures for 1987/8. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner. Yearly updates available.

POOLSWINNER with FIXGEN £16.50 (for both)

## COURSEWINNER V3

THE PUNTERS COMPUTER PROGRAM

NOT JUST A TIPSTER PROGRAM, Coursewinner V3 can be used by experts and occasional punters alike.

You can develop and test your own unique winning system by adjusting the analysis formula, or use the program in simple mode. Coursewinner V3 uses statistical analysis of major factors including past form, speed ratings, course statistics, prize money, weight, going, trainer and jockey form etc. etc. It outputs most likely winners, good long odds bets, forecasts, tricast etc. The database includes vital course statistics for all British courses. You can update the database - never goes out of date. FULL PRINTER SUPPORT.

PRICE £15.00 (all inclusive) includes Flat AND National Hunt versions.

ALL PROGRAMS AVAILABLE FOR: AMSTRAD CPCs, AMSTRAD PCWs, PC1512, All BBCs, All SPECTRUMS, COMMODORE 64/128. Supplied on tape (automatic conversion to disc) - except PCW and PC1512 (on disc - add £3.00).

# Software for Sale

*If you think that one of our programmes looks very interesting, but you can't afford the time to type it in then our software service will help you out.*

**I**t's three o'clock in the morning. You sit at the computer keyboard just finished a marathon typing session entering one of the superb programmes from *Your Commodore*. Your fingers reach for the keyboard and press the letters R, U and N. You press RETURN, sit back and nothing happens.

Everyone has probably faced this problem. When it does happen it's a matter of spending hours searching through the program for any typing mistakes. No matter how long you look or how many people help you, you can usually guarantee that at least one little bug slips through unnoticed.

The *Your Commodore* Software Service makes available all of the programmes from each issue on both cassette and disk at a price of £6.00 for disk and £4.00 for cassette. None of the documentation for the programmes is supplied with the software since it is all available in the relevant magazine. Should you not have the magazine then back issues are available from the following address:

INFONET LTD, 5 River Park Estate, Berkhamsted,  
Herts HP4 1HL.  
TEL: (0447) 7661/4.

please contact this address for prices and availability.

## The Disk

Programmes on the disk will also be supplied as totally working versions, i.e. when possible we will not use Basic Loaders thus making use of the programmes much easier. Unfortunately at the moment we cannot duplicate C16 and Plus/4 cassettes. However programmes for these machines will be available on the disk.

What programmes are available?

At the top of each article you will find a strap containing the article type, C64 Program etc. So that you can see which programmes are available on which format you will also find a couple of symbols after this strap. The symbols have the following meaning:

This symbol means that the program is available on cassette.

These programs are available on disk.

## Please Note

Since the programs supplied on cassette are total working versions of the program, we do not put disk-only programmes on tape. There is no sense in placing a program that expects to be reading from disk on to tape. YC

## MAY 1987

**LOWER CASE GRAPHICS** - Using lower case text on your C16 and Plus/4 graphics screen. (On disk only).

**C16 CHARACTER EDITOR** - A powerful character editor for the C16 and Plus/4. (On disk only).

**EVERYMAN'S GUIDE TO GRAPHICS** - All of the programmes from this fascinating article.

**C64 SPRITE EDITOR** - A comprehensive sprite editor for the C64. Available for both disk and tape.

**CEDIT 64** - A character editor with no fewer than 44 different commands. (Available for tape and disk.)

**ORDER CODE**

**DISK YDMAY87 £6.00 TAPE YCMAY87 £4.00**

## JUNE 1987

**DUAL PROGRAMMING** Have two programmes in your Plus/4's memory at once. (On disk only.)

**EMULATOR 64** - Machine code single stepper for the C64.

**SMART LISTER** - Make your listings smarter and neater with this program. (C64)

**PROCEDURES** - Easier programming for the C64 with this program.

**C64 SOURCE GENERATOR** - A powerful disassembler for the C64.

**LIST ENHANCER** - Improve the LIST command of your C64.

**ANALYSER** - A machine code debugger for the C128.

**ORDER CODE**

**DISK YDJUN87 £6.00**

**TAPE YCJUN87 £4.00**

## JULY 1987

**UTILITY COMMANDS** - This provides many vital commands missing from Basic 7.0 on the 128.

**PLUS/4 AND C64 CRUNCHER** - Speed up your programmes with these handy utilities.

**PROGRAMMABLE FUNCTION KEYS** — A utility to make more use of the function keys on the C64.

**DISKIT 5** — A handy routine to convert memory to data statements on the C64. (Disk only.)

**ARCADE ACTION** — Get those sprites with these handy arcade routines on the C64.

**CROSS REFERENCE** — This program helps you sort out your variables on the C64.

**SUICIDE RUN** — A fast and stimulating game for the C64.

**ORDER CODE**

**DISK YDJULY87 £6.00**

**TAPE YCJULY87 £4.00**

**AUGUST 1987**

**DISKIT 6** — Fast file copier for disk users. (C64 - disk only.)

**SCREEN MAKER** — Design text and low-res graphic screens with ease. (C64).

**SCREEN DUMP** — A Hi-Res screen dump for the C64 plus MPS801 printer.

**NUMBER BASE TUTOR** — A C64 educational program helping with tuition of number bases other than 10.

**C16 SPRITE** — Does your C16 lack something? Then add sprites with this useful utility. For C16 and Plus/4, available on disk only.

**WINDOWS** — A text window system for the C64.

**Order Codes**

**DISK YDAUG87 £6.00**

**TAPE YCAUG87 £4.00**

**SEPTEMBER 1987**

**DISKIT 7** — Copy your disk programmes to turbo tape with ease. (C64 - disk only.)

**PLUS/4 ANIMATED GRAPHICS** — High-Res Animation for Plus/4 owners. (Disk only.)

**SMOOTH VERTICAL SCROLLER** — Professional titling for video owners. (C64)

**ORDER CODE**

**DISK YDSEP87 £6.00**

**TAPE YCSEP87 £4.00**

**SPEEDY ASSEMBLER**

Your Commodore's own assembler as used in our Byting into the 6510 series, complete with manual.

**YSPASSD £9.95.**

**YSPASSC £9.95.**

Cassettes or disks are available from March 1986. Please ring the editorial office (01-437-0626) for details of these.

**ORDER FORM — PLEASE COMPLETE IN BLOCK CAPITALS**

# Tech Troubles

*If you have any technical problems, write to our agony uncle, Tim Arnot who will do his best to help.*

*By Tim Arnot*

Dear Tim,

I have a Commodore 128 and 1571 disk drive. After what I've heard recently, just how safe is it to use the back of the disk, especially with programmes like Superbase?

Raymond North, Blackpool.

Hi Raymond,

The 1571 has certainly received its fair share of criticism over the past few months. In essence, the problem with it, is that under certain circumstances, files that use the second side of the disk can become trashed. This trashing will ONLY occur under the following specific conditions:

Either one RELative file and one SEQuential file is open or three SEQuential files are open. Of course, one of those files must be on side two!

What happens to your newly opened file on side two is basically this. After 1000 or so bytes have been written to the file, corruption of data WILL occur. The resulting file will contain only up to seven blocks of data regardless of how much was written. If you then COLLECT (validate) the disk, the block count no longer adds up to 1328.

ICPUG member Greg Perry from Australia recently provided the following program which demonstrates the problem.

PROGRAM: 1571 BUG DEMO

```
100 REM *** DEMO OF 1571 BUG ***
110 REM *** CREATE RELATIVE FILE
    TO FILL SIDE 1 ***
120 DOPEN#2, "MAIN FILE", L254:GOS
    UB '120
```

```
130 PRINT "PLEASE WAIT - CREATIN
    G RELATIVE FILE"
140 RN=710:GOSUB 390:REM POSITIO
    N RECORD
150 PRINT#2, "END RECORD"
160 REM *** WRITE SOME RECORDS T
    O FILE ***
170 FOR RN=1 TO 40
180 PRINT "WRITING RECORD #";RN
190 GOSUB 390:REM POSITION RECOR
    D
200 PRINT#2, "THIS IS RECORD #";R
    N
210 NEXT RN:DCLOSE
220 REM *** DEMONSTRATION OF ERR
    OR ***
230 DOPEN#3, "BAD FILE SIDE 2", W
240 IF DS=63 THEN DCLOSE:SCRATCH
    "BAD*":GOSUB 420:GOTO 230
250 DOPEN#2, "MAIN FILE"
260 FOR RN=1 TO 40
270 PRINT "READING RECORD #";RN
280 GOSUB 390:REM POSITION RECOR
    D
290 REM *** READ FROM REL FILE A
    ND WRITE TO SEQ FILE ***

310 PRINT#3, "THIS IS A COPY OF R
    ECORD #";RN;"=";AS
320 NEXT RN:DCLOSE
330 REM *** NOW READ BACK THE ME
    SS WE CREATED ***
340 DOPEN#2, "BAD FILE SIDE 2"
350 I=0: DO UNTIL ST<>0:I=I+1
360 INPUT#2, AS:PRINT I, AS
370 LOOP:DCLOSE:END
380 REM *** POSITION RELATIVE FI
    LE ***
390 RECORD#2, (RN):GOSUB 420
400 RECORD#2, (RN)
410 REM *** CHECK DISK ERROR ***
420 IF DS<20 OR DS=50 THEN RETUR
    N
430 PRINT "DISK ERROR";DS$
440 DCLOSE:END
```

Run the program on a newly formatted disk. A relative file is set up, filling all of side one and part of side two. The first 40 records are then written. To demonstrate the bug, we open a SEQuential file and copy the contents of the first 40 records into it. The resulting file is corrupt. You will see that most of the information we copied is missing. If you COPY "BADFILE SIDE 2" TO "ANO-

THER", you will see something curious - the file is now only two blocks long!

This problem will occur with Superbase, and any other application that has more than one file open at once. Program loading and saving is perfectly alright, as there is only one file open. Keeping to side one is also perfectly safe.

There are new ROMs on the way, but they have been held up by the release of the new 128D. Commodore should be able to supply them 'real soon now'(!), so if in doubt, hassle them. The cost is yet to be announced.

Dear Tim,

I own an old 4032 PET and 4040 disk drive. I recently bought a Plus/4 and 1551 disk drive. My problem is this. If I save a program on the PET, I can load it on the Plus/4, but if I save it on the Plus/4, I can't load it back on the PET.

Can you help me?

James McHenery, Aberdeen.

Hi James,

The reason for this is that the LOAD command behaves slightly differently on the PET compared with the later Commodore computers. On the Plus/4 (or C64, C128 etc), when you type LOAD "ANYPROG", the program is loaded into memory, starting at a place known as the 'start of Basic'. This is the place where Basic programmes are stored, and it varies from machine to machine. For instance, on the PET it is \$0401, on the 64 it is \$0801, the 128 is \$1C01, and on the Plus/4 it is \$1001.

Additionally, the 128 and Plus/4

will move the start of Basic up to \$4001 if a high resolution graphics bitmap screen has been created (the \$ signs indicate the addresses are in hexadecimal, or base 16).

The important thing to grasp is that these computers will always load to the start of Basic, no matter where it is. The PET LOAD command is different, in that it loads to the absolute address from which the program was saved, in the case of the Plus/4, \$1001. (If you enter the PET's monitor by typing SYS 4, you can see the program using the command M 1000 2000, which will display the relevant portion of memory.)

In fact, LOAD "ANYPROG"8 on the PET is exactly equivalent to LOAD "ANYPROG",8,1 on the Plus/4. In order to see a Plus/4 program on a PET, you will have to move the start of Basic up to \$1001. This can be achieved by typing POKE40,1: POKE 41,16:NEW before loading the program. An alternative, if you have access to a disk monitor is to change the first two bytes of the program file to \$01 04.

Dear Tim,

I am moving to America in the near future and I have a Commodore 64, and want to take it with me. Because the voltages are different, I know I will have to buy a new power pack, but is it alright to plug the 64 into a TV?

Keith Harrison, Kidderminster.

Hi Keith,

The short answer to your question is no. You are correct in saying that the mains supply is different - here we have 240 volts at 50 Hz, and in America, they have 110 volts at 60 Hz. Thus if you try to plug your 64 in, it will not work. However, a suitable transformer could be bought out there.

The essential problem is one of TV standards. Even if you could get the 64 to function, American TV sets simply do not like the sort of signals that British TV sets thrive on. I will explain.

In Europe (except France), we use a TV standard known as PAL (Phase Alternate Line). This sends a little dot of light across the screen 625 times,

each crossing slightly below the last, until it reaches the bottom. This is known as scanning, and the little dot is called a raster. Each complete scan of the picture is completed in 1/50 second. Thus, our TV sets receive 50 complete pictures in a second (actually, that is a slight simplification, but it will do).

In America, (and Russia) they use a system called NTSC (North American Television Standards Committee, or better known as Never Twice the Same Colour - if you've ever seen American sit-coms you'll know why!). This only has 525 lines in each picture, and the pictures are transmitted 60 times per second. There are also other differences to do with things like phase, but that gets complicated.

Thus, your 64 puts out 625 line PAL and your TV will want 525 line NTSC, and ne'er the twain shall meet. Of course it is possible to convert one to the other, but on a conservative estimate, a box to do that will cost something over ten grand. Sell your 64 and buy another out there. It's cheaper and much less hassle!

# Listings

*Get it right first time with our deluxe program system  
for the C64.*

**Y**ou may have noticed that our listings are free of those horrible little black blobs which send you searching around the keyboard for a suitable graphic symbol. You may also have noticed the funny numbers by the side of each line of the listing. Fret no more, it's all part of our easy entry aid.

Instead of those nasty graphics and rows of countless spaces in PRINT statements and strings we use a special coding system. The code, or mnemonic, is always contained in square brackets and you'll soon learn to decipher their meanings.

For example, [SA] would mean type in a Shifted A, or an ace of spades in layman's terms, and [SA10] would mean a row of ten of these symbols.

[S+2] means hold down the shift key and press the plus key twice. It doesn't take a great leap of logic to realise that [C+2] means exactly the same thing except that the Commodore key (bottom left of the keyboard) is held down instead of the shift key.

If more than two spaces appear in a statement then this will be printed as [SPC4] or, exceptionally, [SSPC4]. Translated into English this means press the spacebar four times or in the latter case hold the shift key down while you do it.

A string of special characters could appear as:

[CTRL N, DOWN2, LEFT5, BLUE, F3, C3]

This would be achieved by holding

down the CTRL key as you press N, press the cursor key down twice, the cursor left key five times, press the key marked BLUE while holding down the CTRL key, press the F3 key and, finally hold the Commodore key down while pressing the number two key (C2 would of course make the computer print in brown).

Always remember that you should only have a row of graphics characters on your screen with no square brackets and no commas, unless something like this appears:

[SS],[C\*]

In this case the two characters should have a comma between them.

On rare occasions [REV T] will appear in a listing. This is a delete symbol and is created by entering the line up to this mnemonic. Then type a closing quotation mark (SHIFT & 2) and delete it. This gets the computer out of quotes mode. Hold down CTRL and press the number nine key (RVSON), type the relevant number of reversed T's and then hold down CTRL and press zero (RVSOFF). Next type another quotation mark and delete it again. Now finish the line and press RETURN.

A list of these special cases is given in the table but remember that only one of these mnemonics will appear outside of a PRINT string: the symbol for pi. This may appear when its value is needed in a calculation so this may look something like:

:CC=2\*[PI]\*R:

Ignore the square brackets and just type in a shifted upward pointing arrow (ie. the pi symbol).

## Checksum Program

The hexadecimal numbers appearing in a column to the left of the listing should not be typed in with the program. These are merely checksum values and are there to help you get each line right. Don't worry if you don't understand the hexadecimal system, as long as you can compare two characters on the screen with the corresponding two characters in the magazine you can use our line checking program.

Type in the Checksum Program, make sure that you've not made any mistakes and save it to tape or disk

immediately because it will be used with most of the present and future listings appearing in Your Commodore.

At the start of each programming session, load Checksum and run it. The screen will turn brown with yellow characters and each time you type in a line and press the RETURN key a number will appear on the screen in white. This should be the same as the corresponding value in the magazine.

If the two values don't relate to one another, you have not copied the line exactly as printed so go back and check each character carefully. When you find the error simply correct it and

press RETURN again.

If you want to turn off the checker simply type SYS49152 and the screen will return to the familiar blue colours. You can then do whatever it was you wanted to do and if this doesn't use the area where Checksum lies you can go back to it with the same SYS command.

No system is foolproof but the chances of two errors cancelling one another out are so remote that we believe our listings are more reliable than any other magazine in the world. So get typing!

YG

## TERMS & CONDITIONS

### CLASSIFIED ADVERTISING TERMS & CONDITIONS

Our terms for new advertisers (semi-display  
and lineage) are strictly pro-forma payments  
until satisfactory reference can be taken up  
(excluding recognised advertising agencies).  
Cheques and P.O.'s should be crossed and  
made payable to ARGUS SPECIALIST  
PUBLICATIONS LTD. and sent together with  
the advertisement to:

"The Classified Dept.,  
No. 1 Golden Square,  
London W1R 3AB.

There are no reimbursements for can-  
cellations. Advertisements arriving too late for  
a particular issue will be inserted in the  
following issue unless accompanied by  
instructions to the contrary. It is the res-  
ponsibility of the advertiser to ensure that the  
first insertion of every series is published  
correctly, and corrections must be notified in  
time for the second insertion, otherwise the  
publishers will not accept any liability or offer  
any reduction in charges.

All advertising sales are subject to Govern-  
ment Regulations concerning VAT.  
Advertisers are responsible for complying with  
the various legal requirements in force eg: The  
Trade Description Act, sex discrimination act &  
the business advertisements (disclosure)  
order 1977.

Full Terms & Conditions of Advertising  
available on request.

## C16 Sprite

There are no problems with this program as printed. A number of people have queried how they should enter the [255] statements that appear in some of the lines of the DEMO program. When our printer can't reproduce a Commodore graphic, either a mnemonic such as [LEFT] is printed or the code of the character is printed within square brackets. In this case the character should be looked up in your manual and entered. In the case of the [255] the character that should be entered is the PI figure ( $\pi$ ).

## Software for Sale Important Notice

A number of people have reported an error when LOADING drawings that have been SAVED using the TEC DRAW 64 program.

It appears that a master copy became corrupted and has caused these problems.

Should your copy of the program suffer from this problem please return your disk to:

OMEGA MICRO SERVICES  
7 GRAHAM AVENUE  
BRINSWORTH  
ROTHERHAM  
S60 5LA.

and a new disk will be sent by return post. Sorry for any inconvenience caused.

Apologies are also due to people who experienced delays with software ordered in late June/early July. Unfortunately, problems were caused by problems with the postal service within London.

## Fist

Are you a winner in the Exploding Fist competition from April 1987? Read on and find out.

## Bug Finder

We'd like to remind our readers that we run a Bug Finder service.

If you have typed in one of our programmes and despite much checking, you still can't get it to run, then send us the following:

Two copies of your program on tape or disk.

A description of your problem.

If possible a listing of your work (you may omit this).

A stamped, self addressed envelope for return of the program to you.

Should any of the above be missing

then we will not be able to deal with your query.

We will try to point out where you have made errors and place a corrected copy of the program back on to your tape or disk before we return it to you.

Do not send a program to us as soon as it stops working, please check it several times first.

We do get a large number of queries and so it may take a while for us to deal with yours personally.

**Note:** we can only deal with problems relating to programmes published in *Your Commodore*.

# You won't find these programs in the top ten!

These programs have sold thousands of copies, and yet you won't have seen them in the charts — why?

We produce programs that you can really get your teeth into. Programs like **BUSICALC** and **BUSICALC 3** which can be used at home or in the office to do all sorts of calculations, forecasts and budgets.

Programs like **MIKRO ASSEMBLER** and the **ZOOM** monitor which make it easy to write machine code programs. Programs like **MUSIC MASTER** which turn your computer into a musical instrument. And programs like the **BLITZ** compiler which makes ordinary BASIC programs run much, much faster.

We have been writing programs for Commodore computers since 1978 and now have hundreds of programs for the PET, VIC 20, CBM 64, CBM 128, even the C16 and Plus/4. So why aren't our programs in the charts?

Because our programs aren't one minute wonders, here today and gone tomorrow. Programs we released for the 64 in 1983 are still selling — and even more important, the people who bought them then are still using them.

Software should be an investment, not money down the drain. We believe that the more you put into a program, the more you should get out of it, and that's the way it works with software from **SUPERSOFT**.

The programs listed on the right represent a small selection from our range, but you can get a full list if you phone or write to the address below. We offer an excellent mail order service, and you can pay by cheque, Access, or Visa.
